- [58991] The function of DIO3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.DKFZP434A0131 (Accession NP_061864.1) is another GAM8297 target gene, herein designated TARGET GENE. DKFZP434A0131 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434A0131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434A0131

BINDING SITE, designated SEQ ID:2459, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58992] Another function of GAM8297 is therefore inhibition of DKFZP434A0131 (Accession NP_061864.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434A0131.

[58993] DKFZp547J144 (Accession XP_091486.2) is another GAM8297 target gene, herein designated TARGET GENE. DKFZp547J144 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp547J144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547J144 BINDING SITE, designated SEQ ID:9218, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58994] Another function of GAM8297 is therefore inhibition of DKFZp547J144 (Accession XP_091486.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp547J144.

[58995] DKFZP564M082 (Accession NP_054761.1) is another GAM8297 target gene, herein designated TARGET GENE. DKFZP564M082 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564M082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564M082 BINDING SITE, designated SEQ ID:17456, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58996] Another function of GAM8297 is therefore inhibition of DKFZP564M082 (Accession NP_054761.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564M082.

[58997] DKFZp761N1114 (Accession XP_086327.6) is another GAM8297 target gene, herein designated TARGET GENE. DKFZp761N1114 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761N1114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761N1114 BINDING SITE, designated SEQ ID:1345, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58998] Another function of GAM8297 is therefore inhibition of DKFZp761N1114 (Accession XP_086327.6) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761N1114.

[58999] DKFZp762A217 (Accession NP_689801.1) is another GAM8297 target gene, herein designated TARGET GENE. DKFZp762A217 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762A217, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762A217 BINDING SITE, designated SEQ ID:20098, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59000] Another function of GAM8297 is therefore inhibition of DKFZp762A217 (Accession NP_689801.1) . Accordingly,

utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762A217.

[59001] Deducator of cyto-kinesis 3 (DOCK3, Accession XP_039259.5) is another GAM8297 target gene, herein designated TARGET GENE. DOCK3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DOCK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DOCK3 BINDING SITE, designated SEQ ID:3680, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59002] Another function of GAM8297 is therefore inhibition of Deducator of cyto-kinesis 3 (DOCK3, Accession XP_039259.5) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DOCK3.

[59003] DRIL2 (Accession NP_006456.1) is another GAM8297 target gene, herein designated TARGET GENE. DRIL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DRIL2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRIL2 BINDING SITE, designated SEQ ID:1268, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59004] Another function of GAM8297 is therefore inhibition of DRIL2 (Accession NP_006456.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRIL2.

[59005] Endothelial differentiation, sphingolipid g-protein-coupled receptor, 1 (EDG1, Accession NP_001391.2) is another GAM8297 target gene, herein designated TARGET GENE. EDG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EDG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDG1 BINDING SITE, designated SEQ ID:11979, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59006] Another function of GAM8297 is therefore inhibition of Endothelial differentiation, sphingolipid g-pro-

tein-coupled receptor, 1 (EDG1, Accession NP_001391.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDG1.

[59007] Endothelin 3 (EDN3, Accession NP_000105.1) is another GAM8297 target gene, herein designated TARGET GENE. EDN3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EDN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDN3 BINDING SITE, designated SEQ ID:18442, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59008] Another function of GAM8297 is therefore inhibition of Endothelin 3 (EDN3, Accession NP_000105.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDN3.

[59009] Endothelin receptor type a (EDNRA, Accession NP_001948.1) is another GAM8297 target gene, herein designated TARGET GENE. EDNRA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by EDNRA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDNRA BINDING SITE, designated SEQ ID:14062, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59010] Another function of GAM8297 is therefore inhibition of Endothelin receptor type a (EDNRA, Accession NP_001948.1), a gene which binds endothelins, and induces intracellular calcium flux and arachidonic acid accumulation and therefore may be associated with Resistance to migraine. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Resistance to migraine, and of other diseases and clinical conditions associated with EDNRA.

[59011] The function of EDNRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM627.1.Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) is another GAM8297 target gene, herein designated TARGET GENE. EGFL4 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by EGFL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL4 BINDING SITE, designated SEQ ID:15348, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59012] Another function of GAM8297 is therefore inhibition of Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL4.

[59013] Er to nucleus signalling 1 (ERN1, Accession NP_001424.1) is another GAM8297 target gene, herein designated TARGET GENE. ERN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ERN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERN1 BINDING SITE, designated SEQ ID:14185, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59014] Another function of GAM8297 is therefore inhibition of Er

to nucleus signalling 1 (ERN1, Accession NP_001424.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERN1.

[59015] FLJ10521 (Accession NP_060595.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ10521 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10521, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10521 BINDING SITE, designated SEQ ID:9343, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59016] Another function of GAM8297 is therefore inhibition of FLJ10521 (Accession NP_060595.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10521.

[59017] FLJ10786 (Accession NP_060689.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ10786 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10786, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10786 BINDING SITE, designated SEQ ID:3362, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59018] Another function of GAM8297 is therefore inhibition of FLJ10786 (Accession NP_060689.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10786.

[59019] FLJ10803 (Accession NP_060694.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ10803 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10803 BINDING SITE, designated SEQ ID:13516, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59020] Another function of GAM8297 is therefore inhibition of FLJ10803 (Accession NP_060694.1) . Accordingly, utilities

of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10803.

[59021] FLJ10895 (Accession NP_061957.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ10895 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10895 BINDING SITE, designated SEQ ID:15940, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59022] Another function of GAM8297 is therefore inhibition of FLJ10895 (Accession NP_061957.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10895.

[59023] FLJ11539 (Accession NP_079024.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ11539 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11539, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11539 BINDING SITE, designated SEQ ID:12818, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59024] Another function of GAM8297 is therefore inhibition of FLJ11539 (Accession NP_079024.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11539.

[59025] FLJ12660 (Accession NP_079428.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ12660 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12660, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12660 BINDING SITE, designated SEQ ID:1015, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59026] Another function of GAM8297 is therefore inhibition of FLJ12660 (Accession NP_079428.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12660.

[59027] FLJ12788 (Accession NP_071937.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ12788 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12788, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12788 BINDING SITE, designated SEQ ID:16212, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59028] Another function of GAM8297 is therefore inhibition of FLJ12788 (Accession NP_071937.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12788.

[59029] FLJ14260 (Accession NP_079303.2) is another GAM8297 target gene, herein designated TARGET GENE. FLJ14260 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ14260, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ14260 BINDING SITE, designated SEQ ID:10780, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59030] Another function of GAM8297 is therefore inhibition of FLJ14260 (Accession NP_079303.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14260.

[59031] FLJ14827 (Accession NP_116237.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ14827 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14827 BINDING SITE, designated SEQ ID:5731, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59032] Another function of GAM8297 is therefore inhibition of FLJ14827 (Accession NP_116237.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ14827.

[59033] FLJ20079 (Accession NP_060126.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ20079 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20079 BINDING SITE, designated SEQ ID:2651, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59034] Another function of GAM8297 is therefore inhibition of FLJ20079 (Accession NP_060126.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20079.

[59035] FLJ20364 (Accession NP_060255.2) is another GAM8297 target gene, herein designated TARGET GENE. FLJ20364 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20364, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20364 BINDING SITE, designated SEQ ID:12890, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59036] Another function of GAM8297 is therefore inhibition of FLJ20364 (Accession NP_060255.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20364.

[59037] FLJ20502 (Accession NP_060315.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ20502 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20502, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20502 BINDING SITE, designated SEQ ID:19215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59038] Another function of GAM8297 is therefore inhibition of FLJ20502 (Accession NP_060315.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20502.

[59039] FLJ20605 (Accession NP_060368.2) is another GAM8297 target gene, herein designated TARGET GENE. FLJ20605 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20605, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20605 BINDING SITE, designated SEQ ID:2121, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59040] Another function of GAM8297 is therefore inhibition of FLJ20605 (Accession NP_060368.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20605.

[59041] FLJ23056 (Accession NP_078858.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ23056 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ23056, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23056 BINDING SITE, designated SEQ ID:15786, to the

nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59042] Another function of GAM8297 is therefore inhibition of FLJ23056 (Accession NP_078858.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23056.

[59043] FLJ23323 (Accession NP_078930.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ23323 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23323 BINDING SITE, designated SEQ ID:18937, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59044] Another function of GAM8297 is therefore inhibition of FLJ23323 (Accession NP_078930.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23323.

[59045] FLJ30934 (Accession NP_689973.1) is another GAM8297

target gene, herein designated TARGET GENE. FLJ30934 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30934 BINDING SITE, designated SEQ ID:18669, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59046] Another function of GAM8297 is therefore inhibition of FLJ30934 (Accession NP_689973.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30934.

[59047] FLJ31349 (Accession NP_775786.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ31349 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31349, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31349 BINDING SITE, designated SEQ ID:10144, to the nucleotide sequence of GAM8297 RNA, herein designated

GAM RNA, also designated SEQ ID:367.

[59048] Another function of GAM8297 is therefore inhibition of FLJ31349 (Accession NP_775786.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31349.

[59049] FLJ32029 (Accession NP_775853.2) is another GAM8297 target gene, herein designated TARGET GENE. FLJ32029 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32029 BINDING SITE, designated SEQ ID:15817, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59050] Another function of GAM8297 is therefore inhibition of FLJ32029 (Accession NP_775853.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32029.

[59051] FLJ33298 (Accession NP_775907.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ33298

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33298 BINDING SITE, designated SEQ ID:10479, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59052] Another function of GAM8297 is therefore inhibition of FLJ33298 (Accession NP_775907.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33298.

[59053] FLJ33610 (Accession NP_775968.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ33610 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33610, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33610 BINDING SITE, designated SEQ ID:2606, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59054] Another function of GAM8297 is therefore inhibition of FLJ33610 (Accession NP_775968.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33610.

[59055] FLJ35838 (Accession NP_775803.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ35838 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ35838, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35838 BINDING SITE, designated SEQ ID:6529, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59056] Another function of GAM8297 is therefore inhibition of FLJ35838 (Accession NP_775803.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35838.

[59057] FLJ36576 (Accession NP_775793.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ36576 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ36576, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36576 BINDING SITE, designated SEQ ID:8645, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59058] Another function of GAM8297 is therefore inhibition of FLJ36576 (Accession NP_775793.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36576.

[59059] FLJ37318 (Accession NP_689799.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ37318 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ37318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37318 BINDING SITE, designated SEQ ID:5684, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59060] Another function of GAM8297 is therefore inhibition of

FLJ37318 (Accession NP_689799.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37318.

[59061] FLJ38608 (Accession NP_694947.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ38608 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ38608, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38608 BINDING SITE, designated SEQ ID:5277, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59062] Another function of GAM8297 is therefore inhibition of FLJ38608 (Accession NP_694947.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38608.

[59063] FLJ39117 (Accession NP_689577.1) is another GAM8297 target gene, herein designated TARGET GENE. FLJ39117 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39117, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39117 BINDING SITE, designated SEQ ID:8551, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59064] Another function of GAM8297 is therefore inhibition of FLJ39117 (Accession NP_689577.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39117.

[59065] FLJ40160 (Accession NP_775755.2) is another GAM8297 target gene, herein designated TARGET GENE. FLJ40160 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40160, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40160 BINDING SITE, designated SEQ ID:14835, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59066] Another function of GAM8297 is therefore inhibition of FLJ40160 (Accession NP_775755.2) . Accordingly, utilities

of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40160.

[59067] Forkhead box d2 (FOXD2, Accession NP_004465.1) is another GAM8297 target gene, herein designated TARGET GENE. FOXD2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FOXD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXD2 BINDING SITE, designated SEQ ID:11152, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59068] Another function of GAM8297 is therefore inhibition of Forkhead box d2 (FOXD2, Accession NP_004465.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXD2.

[59069] FRABIN (Accession NP_640334.1) is another GAM8297 target gene, herein designated TARGET GENE. FRABIN BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FRABIN, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRABIN BINDING SITE, designated SEQ ID:6720, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59070] Another function of GAM8297 is therefore inhibition of FRABIN (Accession NP_640334.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRABIN.

[59071] FRCP2 (Accession NP_715637.1) is another GAM8297 target gene, herein designated TARGET GENE. FRCP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FRCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRCP2 BINDING SITE, designated SEQ ID:9651, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59072] Another function of GAM8297 is therefore inhibition of FRCP2 (Accession NP_715637.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with FRCP2.

[59073] Follistatin-like 1 (FSTL1, Accession NP_009016.1) is another GAM8297 target gene, herein designated TARGET GENE. FSTL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FSTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSTL1 BINDING SITE, designated SEQ ID:17836, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59074] Another function of GAM8297 is therefore inhibition of Follistatin-like 1 (FSTL1, Accession NP_009016.1), a gene which may modulate the action of some growth factors on cell proliferation and differentiation. and therefore may be associated with Rheumatoid arthritis. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Rheumatoid arthritis., and of other diseases and clinical conditions associated with FSTL1.

[59075] The function of FSTL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM279.1.G2A (Accession NP_037477.1) is another

GAM8297 target gene, herein designated TARGET GENE. G2A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by G2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G2A BINDING SITE, designated SEQ ID:18565, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59076] Another function of GAM8297 is therefore inhibition of G2A (Accession NP_037477.1), a gene which may mediate some of the effects of extracellular atp on insulin secretion. and therefore may be associated with Autoimmune disease. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Autoimmune disease., and of other diseases and clinical conditions associated with G2A.

[59077] The function of G2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Grb2-associated binding protein 3 (GAB3, Accession NP_542179.1) is another GAM8297 target gene, herein designated TARGET GENE. GAB3 BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by GAB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAB3 BINDING SITE, designated SEQ ID:14391, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59078] Another function of GAM8297 is therefore inhibition of Grb2-associated binding protein 3 (GAB3, Accession NP_542179.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAB3.

[59079] Glutamine-fructose-6-phosphate transaminase 2 (GFPT2, Accession NP_005101.1) is another GAM8297 target gene, herein designated TARGET GENE. GFPT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GFPT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GFPT2 BINDING SITE, designated SEQ ID:12066, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[59080] Another function of GAM8297 is therefore inhibition of Glutamine-fructose-6-phosphate transaminase 2 (GFPT2, Accession NP_005101.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GFPT2.

[59081] G protein-coupled receptor 87 (GPR87, Accession NP_076404.2) is another GAM8297 target gene, herein designated TARGET GENE. GPR87 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GPR87, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR87 BINDING SITE, designated SEQ ID:11836, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59082] Another function of GAM8297 is therefore inhibition of G protein-coupled receptor 87 (GPR87, Accession NP_076404.2), a gene which plays a role in cell communication. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR87.

[59083] The function of GPR87 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM588.1.G protein-coupled receptor, family c, group 5, member c (GPC5C, Accession NP_061123.2) is another GAM8297 target gene, herein designated TARGET GENE. GPCR5C BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GPCR5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPCR5C BINDING SITE, designated SEQ ID:8211, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59084] Another function of GAM8297 is therefore inhibition of G protein-coupled receptor, family c, group 5, member c (GPC5C, Accession NP_061123.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPCR5C.

[59085] G protein pathway suppressor 2 (GPS2, Accession NP_004480.1) is another GAM8297 target gene, herein

designated TARGET GENE. GPS2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GPS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPS2 BINDING SITE, designated SEQ ID:13607, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59086] Another function of GAM8297 is therefore inhibition of G protein pathway suppressor 2 (GPS2, Accession NP_004480.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPS2.

[59087] Guanylate kinase 1 (GUK1, Accession NP_000849.1) is another GAM8297 target gene, herein designated TARGET GENE. GUK1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GUK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GUK1 BINDING SITE, designated SEQ ID:11774, to the nucleotide sequence of GAM8297 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:367.

[59088] Another function of GAM8297 is therefore inhibition of Guanylate kinase 1 (GUK1, Accession NP_000849.1), a gene which converts GMP to GTP as part of the cGMP cycle and essential for recycling gmp and indirectly, cgmp. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GUK1.

[59089] The function of GUK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM849.1. Histone deacetylase 1 (HDAC1, Accession NP_004955.2) is another GAM8297 target gene, herein designated TARGET GENE. HDAC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HDAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HDAC1 BINDING SITE, designated SEQ ID:4562, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59090] Another function of GAM8297 is therefore inhibition of

Histone deacetylase 1 (HDAC1, Accession NP_004955.2), a gene which is responsible for the deacetylation of lysine residues on the n- terminal part of the core histones (h2a, h2b, h3 and h4) which plays an important role in transcriptional regulation, cell cycle progression and developmental events. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HDAC1.

[59091] The function of HDAC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM445.2.Hedgehog interacting protein (HHIP, Accession NP_071920.1) is another GAM8297 target gene, herein designated TARGET GENE. HHIP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HHIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HHIP BINDING SITE, designated SEQ ID:842, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59092] Another function of GAM8297 is therefore inhibition of

Hedgehog interacting protein (HHIP, Accession NP_071920.1), a gene which is involved in many fundamental processes in embryonic development, including anteroposterior patterns of limbs and regulation of left-right asymmetry. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HHIP.

[59093] The function of HHIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM700.1. Heterogeneous nuclear ribonucleoprotein h3 (2h9) (HNRPH3, Accession NP_036339.1) is another GAM8297 target gene, herein designated TARGET GENE. HNRPH3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HNRPH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HNRPH3 BINDING SITE, designated SEQ ID:13944, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59094] Another function of GAM8297 is therefore inhibition of

Heterogeneous nuclear ribonucleoprotein h3 (2h9) (HNRPH3, Accession NP_036339.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HNRPH3.

[59095] Heterogeneous nuclear ribonucleoprotein h3 (2h9) (HNRPH3, Accession NP_067676.2) is another GAM8297 target gene, herein designated TARGET GENE. HNRPH3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HNRPH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HNRPH3 BINDING SITE, designated SEQ ID:13944, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59096] Another function of GAM8297 is therefore inhibition of Heterogeneous nuclear ribonucleoprotein h3 (2h9) (HNRPH3, Accession NP_067676.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HNRPH3.

[59097] Homeo box a1 (HOXA1, Accession NP_705873.1) is another GAM8297 target gene, herein designated TARGET GENE. HOXA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HOXA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HOXA1 BINDING SITE, designated SEQ ID:18845, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59098] Another function of GAM8297 is therefore inhibition of Homeo box a1 (HOXA1, Accession NP_705873.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXA1.

[59099] Hydroxysteroid (11-beta) dehydrogenase 2 (HSD11B2, Accession NP_000187.2) is another GAM8297 target gene, herein designated TARGET GENE. HSD11B2 BINDING SITE1 and HSD11B2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HSD11B2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD11B2 BINDING SITE1 and HSD11B2 BINDING SITE2, designated SEQ ID:13964 and SEQ ID:15068 respectively, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59100] Another function of GAM8297 is therefore inhibition of Hydroxysteroid (11- β) dehydrogenase 2 (HSD11B2, Accession NP_000187.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD11B2.

[59101] Heat shock 70kda protein 5 (glucose-regulated protein, 78kda) (HSPA5, Accession NP_005338.1) is another GAM8297 target gene, herein designated TARGET GENE. HSPA5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPA5 BINDING SITE, designated SEQ ID:12356, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59102] Another function of GAM8297 is therefore inhibition of

Heat shock 70kda protein 5 (glucose-regulated protein, 78kda) (HSPA5, Accession NP_005338.1), a gene which is involved in the folding and assembly of proteins in the endoplasmic reticulum (ER). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA5.

[59103] The function of HSPA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Interferon-induced protein with tetratricopeptide repeats 2 (IFIT2, Accession NP_001538.2) is another GAM8297 target gene, herein designated TARGET GENE. IFIT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IFIT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFIT2 BINDING SITE, designated SEQ ID:13164, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59104] Another function of GAM8297 is therefore inhibition of Interferon-induced protein with tetratricopeptide repeats 2 (IFIT2, Accession NP_001538.2). Accordingly, utilities of

GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFIT2.

[59105] Interleukin 17d (IL17D, Accession NP_612141.1) is another GAM8297 target gene, herein designated TARGET GENE. IL17D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL17D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL17D BINDING SITE, designated SEQ ID:1766, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59106] Another function of GAM8297 is therefore inhibition of Interleukin 17d (IL17D, Accession NP_612141.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL17D.

[59107] Interleukin 8 receptor, alpha (IL8RA, Accession NP_000625.1) is another GAM8297 target gene, herein designated TARGET GENE. IL8RA BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by IL8RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL8RA BINDING SITE, designated SEQ ID:1110, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59108] Another function of GAM8297 is therefore inhibition of Interleukin 8 receptor, alpha (IL8RA, Accession NP_000625.1), a gene which is the receptor to interleukin- 8, which is a powerful neutrophils chemotactic factor. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL8RA.

[59109] The function of IL8RA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM680.1. Insulin receptor substrate 3-like (IRS3L, Accession XP_295210.1) is another GAM8297 target gene, herein designated TARGET GENE. IRS3L BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by IRS3L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRS3L BINDING SITE,

designated SEQ ID:14904, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59110] Another function of GAM8297 is therefore inhibition of Insulin receptor substrate 3-like (IRS3L, Accession XP_295210.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRS3L.

[59111] Jade-1 (Accession NP_079176.2) is another GAM8297 target gene, herein designated TARGET GENE. Jade-1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by Jade-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Jade-1 BINDING SITE, designated SEQ ID:7801, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59112] Another function of GAM8297 is therefore inhibition of Jade-1 (Accession NP_079176.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Jade-1.

[59113] Potassium voltage-gated channel, shaker-related subfam-

ily, member 6 (KCNA6, Accession NP_002226.1) is another GAM8297 target gene, herein designated TARGET GENE. KCNA6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KCNA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNA6 BINDING SITE, designated SEQ ID:12111, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59114] Another function of GAM8297 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, member 6 (KCNA6, Accession NP_002226.1), a gene which mediates the voltage-dependent potassium ion permeability of excitable membranes. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA6.

[59115] The function of KCNA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.KCNIP4 (Accession NP_671711.1) is another

GAM8297 target gene, herein designated TARGET GENE. KCNIP4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KCNIP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP4 BINDING SITE, designated SEQ ID:4158, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59116] Another function of GAM8297 is therefore inhibition of KCNIP4 (Accession NP_671711.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP4.

[59117] KIAA0040 (Accession NP_055471.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0040 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0040 BINDING SITE, designated SEQ ID:1670, to the nucleotide sequence of GAM8297 RNA, herein designated

GAM RNA, also designated SEQ ID:367.

[59118] Another function of GAM8297 is therefore inhibition of KIAA0040 (Accession NP_055471.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0040.

[59119] KIAA0125 (Accession NP_055607.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0125 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0125 BINDING SITE, designated SEQ ID:5670, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59120] Another function of GAM8297 is therefore inhibition of KIAA0125 (Accession NP_055607.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0125.

[59121] KIAA0265 (Accession XP_045954.2) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0265

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0265 BINDING SITE, designated SEQ ID:7732, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59122] Another function of GAM8297 is therefore inhibition of KIAA0265 (Accession XP_045954.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0265.

[59123] KIAA0295 (Accession XP_042833.2) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0295 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0295 BINDING SITE, designated SEQ ID:12348, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59124] Another function of GAM8297 is therefore inhibition of KIAA0295 (Accession XP_042833.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0295.

[59125] KIAA0296 (Accession NP_055514.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0296 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0296, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0296 BINDING SITE, designated SEQ ID:19626, to the

nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59126] Another function of GAM8297 is therefore inhibition of KIAA0296 (Accession NP_055514.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0296.

[59127] KIAA0377 (Accession NP_055474.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0377 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0377 BINDING SITE, designated SEQ ID:4379, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59128] Another function of GAM8297 is therefore inhibition of KIAA0377 (Accession NP_055474.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0377.

[59129] KIAA0657 (Accession XP_051017.2) is another GAM8297

target gene, herein designated TARGET GENE. KIAA0657 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0657 BINDING SITE, designated SEQ ID:15617, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59130] Another function of GAM8297 is therefore inhibition of KIAA0657 (Accession XP_051017.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0657.

[59131] KIAA0795 (Accession NP_079286.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0795 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0795, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0795 BINDING SITE, designated SEQ ID:18730, to the nucleotide sequence of GAM8297 RNA, herein designated

GAM RNA, also designated SEQ ID:367.

[59132] Another function of GAM8297 is therefore inhibition of KIAA0795 (Accession NP_079286.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0795.

[59133] KIAA0953 (Accession XP_039733.2) is another GAM8297 target gene, herein designated TARGET GENE. KIAA0953 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0953 BINDING SITE, designated SEQ ID:4538, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59134] Another function of GAM8297 is therefore inhibition of KIAA0953 (Accession XP_039733.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0953.

[59135] KIAA1010 (Accession XP_050742.5) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1010

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1010, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1010 BINDING SITE, designated SEQ ID:19015, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59136] Another function of GAM8297 is therefore inhibition of KIAA1010 (Accession XP_050742.5) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1010.

[59137] KIAA1069 (Accession XP_042635.3) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1069 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1069, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1069 BINDING SITE, designated SEQ ID:5233, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59138] Another function of GAM8297 is therefore inhibition of KIAA1069 (Accession XP_042635.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1069.

[59139] KIAA1126 (Accession XP_050325.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1126 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1126 BINDING SITE, designated SEQ ID:18824, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59140] Another function of GAM8297 is therefore inhibition of KIAA1126 (Accession XP_050325.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1126.

[59141] KIAA1198 (Accession NP_065765.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1198 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1198, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1198 BINDING SITE, designated SEQ ID:12870, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59142] Another function of GAM8297 is therefore inhibition of KIAA1198 (Accession NP_065765.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1198.

[59143] KIAA1271 (Accession XP_045472.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1271 BINDING SITE, designated SEQ ID:11062, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59144] Another function of GAM8297 is therefore inhibition of

KIAA1271 (Accession XP_045472.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1271.

[59145] KIAA1322 (Accession NP_065824.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1322 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1322 BINDING SITE, designated SEQ ID:6018, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59146] Another function of GAM8297 is therefore inhibition of KIAA1322 (Accession NP_065824.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1322.

[59147] KIAA1328 (Accession XP_029429.4) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1328 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1328, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1328 BINDING SITE, designated SEQ ID:11039, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59148] Another function of GAM8297 is therefore inhibition of KIAA1328 (Accession XP_029429.4) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1328.

[59149] KIAA1372 (Accession XP_290527.1) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1372 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1372, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1372 BINDING SITE, designated SEQ ID:11705, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59150] Another function of GAM8297 is therefore inhibition of KIAA1372 (Accession XP_290527.1) . Accordingly, utilities

of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1372.

[59151] KIAA1798 (Accession XP_027074.3) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1798 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1798 BINDING SITE, designated SEQ ID:8257, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59152] Another function of GAM8297 is therefore inhibition of KIAA1798 (Accession XP_027074.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1798.

[59153] KIAA1937 (Accession XP_057107.3) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1937 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1937, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1937 BINDING SITE, designated SEQ ID:15618, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59154] Another function of GAM8297 is therefore inhibition of KIAA1937 (Accession XP_057107.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1937.

[59155] KIAA1999 (Accession XP_114447.2) is another GAM8297 target gene, herein designated TARGET GENE. KIAA1999 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1999 BINDING SITE, designated SEQ ID:7678, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59156] Another function of GAM8297 is therefore inhibition of KIAA1999 (Accession XP_114447.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1999.

[59157] Kinesin heavy chain member 2 (KIF2, Accession NP_004511.1) is another GAM8297 target gene, herein designated TARGET GENE. KIF2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF2 BINDING SITE, designated SEQ ID:4157, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59158] Another function of GAM8297 is therefore inhibition of Kinesin heavy chain member 2 (KIF2, Accession NP_004511.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF2.

[59159] Kallikrein 10 (KLK10, Accession NP_002767.2) is another GAM8297 target gene, herein designated TARGET GENE. KLK10 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KLK10, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLK10 BINDING SITE, designated SEQ ID:17457, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59160] Another function of GAM8297 is therefore inhibition of Kallikrein 10 (KLK10, Accession NP_002767.2), a gene which has a tumor- suppressor role in breast and prostate cancer. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLK10.

[59161] The function of KLK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Kallikrein 10 (KLK10, Accession NP_665895.1) is another GAM8297 target gene, herein designated TARGET GENE. KLK10 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KLK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KLK10 BINDING SITE, designated SEQ ID:17457, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59162] Another function of GAM8297 is therefore inhibition of Kallikrein 10 (KLK10, Accession NP_665895.1), a gene which has a tumor- suppressor role in breast and prostate cancer. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLK10.

[59163] The function of KLK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Karyopherin alpha 3 (importin alpha 4) (KPNA3, Accession NP_002258.1) is another GAM8297 target gene, herein designated TARGET GENE. KPNA3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KPNA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KPNA3 BINDING SITE, designated SEQ ID:3939, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59164] Another function of GAM8297 is therefore inhibition of Karyopherin alpha 3 (importin alpha 4) (KPNA3, Accession NP_002258.1), a gene which seems to act as a cytosolic receptor for both simple and bipartite nls motifs. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KPNA3.

[59165] The function of KPNA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1. Keratin 8 (KRT8, Accession NP_002264.1) is another GAM8297 target gene, herein designated TARGET GENE. KRT8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KRT8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KRT8 BINDING SITE, designated SEQ ID:9986, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59166] Another function of GAM8297 is therefore inhibition of Keratin 8 (KRT8, Accession NP_002264.1), a gene which may form intermediate filaments; type II keratin, member

of a family of structural proteins and therefore may be associated with Cirrhosis, cryptogenic. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Cirrhosis, cryptogenic, and of other diseases and clinical conditions associated with KRT8.

[59167] The function of KRT8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2. Lag1 longevity assurance homolog 1 (*s. cerevisiae*) (LASS1, Accession NP_067090.1) is another GAM8297 target gene, herein designated TARGET GENE. LASS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LASS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LASS1 BINDING SITE, designated SEQ ID:8142, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59168] Another function of GAM8297 is therefore inhibition of Lag1 longevity assurance homolog 1 (*s. cerevisiae*) (LASS1, Accession NP_067090.1), a gene which may mediate cell differentiation events during embryonic develop-

ment. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LASS1.

[59169] The function of LASS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Leucine-rich repeat lgi family, member 3 (LGI3, Accession NP_644807.1) is another GAM8297 target gene, herein designated TARGET GENE. LGI3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LGI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGI3 BINDING SITE, designated SEQ ID:566, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59170] Another function of GAM8297 is therefore inhibition of Leucine-rich repeat lgi family, member 3 (LGI3, Accession NP_644807.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGI3.

[59171] Lim and senescent cell antigen-like domains 1 (LIMS1,

Accession NP_004978.2) is another GAM8297 target gene, herein designated TARGET GENE. LIMS1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LIMS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMS1 BINDING SITE, designated SEQ ID:9951, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59172] Another function of GAM8297 is therefore inhibition of Lim and senescent cell antigen-like domains 1 (LIMS1, Accession NP_004978.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMS1.

[59173] LOC114987 (Accession NP_660284.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC114987 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC114987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC114987 BINDING SITE, desig-

nated SEQ ID:7181, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59174] Another function of GAM8297 is therefore inhibition of LOC114987 (Accession NP_660284.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC114987.

[59175] LOC115219 (Accession XP_055499.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:12944, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59176] Another function of GAM8297 is therefore inhibition of LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC115219.

[59177] LOC121301 (Accession XP_062574.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC121301 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC121301, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121301 BINDING SITE, designated SEQ ID:18517, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59178] Another function of GAM8297 is therefore inhibition of LOC121301 (Accession XP_062574.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121301.

[59179] LOC122664 (Accession NP_776245.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC122664 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC122664, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC122664 BINDING SITE, designated SEQ ID:10278, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59180] Another function of GAM8297 is therefore inhibition of LOC122664 (Accession NP_776245.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC122664.

[59181] LOC126616 (Accession XP_059059.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC126616 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC126616, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126616 BINDING SITE, designated SEQ ID:17931, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59182] Another function of GAM8297 is therefore inhibition of LOC126616 (Accession XP_059059.1) . Accordingly, utili-

ties of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126616.

[59183] LOC127540 (Accession XP_059164.6) is another GAM8297 target gene, herein designated TARGET GENE. LOC127540 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by LOC127540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127540 BINDING SITE, designated SEQ ID:8397, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59184] Another function of GAM8297 is therefore inhibition of LOC127540 (Accession XP_059164.6) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127540.

[59185] LOC136345 (Accession XP_072455.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC136345 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC136345, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC136345 BINDING SITE, designated SEQ ID:12191, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59186] Another function of GAM8297 is therefore inhibition of LOC136345 (Accession XP_072455.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC136345.

[59187] LOC139201 (Accession XP_208439.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC139201 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC139201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139201 BINDING SITE, designated SEQ ID:10411, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59188] Another function of GAM8297 is therefore inhibition of LOC139201 (Accession XP_208439.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139201.

[59189] LOC143458 (Accession NP_777562.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC143458 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC143458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143458 BINDING SITE, designated SEQ ID:10575, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59190] Another function of GAM8297 is therefore inhibition of LOC143458 (Accession NP_777562.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143458.

[59191] LOC145828 (Accession XP_096879.1) is another GAM8297 target gene, herein designated TARGET GENE.

LOC145828 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC145828, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145828 BINDING SITE, designated SEQ ID:7193, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59192] Another function of GAM8297 is therefore inhibition of LOC145828 (Accession XP_096879.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145828.

[59193] LOC147991 (Accession XP_085993.3) is another GAM8297 target gene, herein designated TARGET GENE. LOC147991 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147991 BINDING SITE, designated SEQ ID:9617, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59194] Another function of GAM8297 is therefore inhibition of LOC147991 (Accession XP_085993.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147991.

[59195] LOC149420 (Accession NP_690048.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC149420 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149420, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149420 BINDING SITE, designated SEQ ID:8650, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59196] Another function of GAM8297 is therefore inhibition of LOC149420 (Accession NP_690048.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149420.

[59197] LOC149703 (Accession XP_097719.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC149703 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149703, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149703 BINDING SITE, designated SEQ ID:18798, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59198] Another function of GAM8297 is therefore inhibition of LOC149703 (Accession XP_097719.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149703.

[59199] LOC150763 (Accession XP_086996.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC150763 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC150763, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC150763 BINDING SITE, designated SEQ ID:18707, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59200] Another function of GAM8297 is therefore inhibition of LOC150763 (Accession XP_086996.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150763.

[59201] LOC151154 (Accession XP_098008.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC151154 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC151154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151154 BINDING SITE, designated SEQ ID:798, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59202] Another function of GAM8297 is therefore inhibition of LOC151154 (Accession XP_098008.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC151154.

[59203] LOC151178 (Accession XP_087117.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC151178 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC151178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151178 BINDING SITE, designated SEQ ID:4822, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59204] Another function of GAM8297 is therefore inhibition of LOC151178 (Accession XP_087117.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151178.

[59205] LOC153516 (Accession NP_612500.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC153516 BINDING SITE1 and LOC153516 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC153516, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153516 BINDING SITE1 and LOC153516 BINDING SITE2, designated SEQ ID:7669 and SEQ ID:9799 respectively, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59206] Another function of GAM8297 is therefore inhibition of LOC153516 (Accession NP_612500.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153516.

[59207] LOC155008 (Accession XP_088116.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC155008 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC155008, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155008 BINDING SITE, designated SEQ ID:7006, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59208] Another function of GAM8297 is therefore inhibition of LOC155008 (Accession XP_088116.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155008.

[59209] LOC155032 (Accession XP_098647.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC155032 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC155032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155032 BINDING SITE, designated SEQ ID:12191, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59210] Another function of GAM8297 is therefore inhibition of LOC155032 (Accession XP_098647.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155032.

[59211] LOC158014 (Accession XP_088442.1) is another GAM8297 target gene, herein designated TARGET GENE.

LOC158014 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC158014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158014 BINDING SITE, designated SEQ ID:13911, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59212] Another function of GAM8297 is therefore inhibition of LOC158014 (Accession XP_088442.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158014.

[59213] LOC158062 (Accession XP_098861.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC158062 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC158062, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158062 BINDING SITE, designated SEQ ID:6216, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59214] Another function of GAM8297 is therefore inhibition of LOC158062 (Accession XP_098861.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158062.

[59215] LOC158436 (Accession XP_098942.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC158436 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158436 BINDING SITE, designated SEQ ID:17142, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59216] Another function of GAM8297 is therefore inhibition of LOC158436 (Accession XP_098942.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158436.

[59217] LOC159121 (Accession XP_099028.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC159121 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC159121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159121 BINDING SITE, designated SEQ ID:16800, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59218] Another function of GAM8297 is therefore inhibition of LOC159121 (Accession XP_099028.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159121.

[59219] LOC168667 (Accession XP_166592.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC168667 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC168667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC168667 BINDING SITE, designated SEQ ID:1796, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59220] Another function of GAM8297 is therefore inhibition of LOC168667 (Accession XP_166592.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168667.

[59221] LOC197322 (Accession NP_777577.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC197322 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC197322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197322 BINDING SITE, designated SEQ ID:16515, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59222] Another function of GAM8297 is therefore inhibition of LOC197322 (Accession NP_777577.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC197322.

[59223] LOC200197 (Accession XP_114148.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC200197 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC200197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200197 BINDING SITE, designated SEQ ID:9656, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59224] Another function of GAM8297 is therefore inhibition of LOC200197 (Accession XP_114148.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200197.

[59225] LOC202024 (Accession XP_114422.3) is another GAM8297 target gene, herein designated TARGET GENE. LOC202024 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC202024, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202024 BINDING SITE, designated SEQ ID:5326, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59226] Another function of GAM8297 is therefore inhibition of LOC202024 (Accession XP_114422.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202024.

[59227] LOC219347 (Accession XP_167564.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC219347 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC219347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219347 BINDING SITE, designated SEQ ID:9192, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59228] Another function of GAM8297 is therefore inhibition of

LOC219347 (Accession XP_167564.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219347.

[59229] LOC220686 (Accession XP_167540.4) is another GAM8297 target gene, herein designated TARGET GENE. LOC220686 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC220686, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220686 BINDING SITE, designated SEQ ID:10547, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59230] Another function of GAM8297 is therefore inhibition of LOC220686 (Accession XP_167540.4) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220686.

[59231] LOC221061 (Accession XP_167709.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC221061 BINDING SITE1 and LOC221061 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221061, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221061 BINDING SITE1 and LOC221061 BINDING SITE2, designated SEQ ID:19881 and SEQ ID:6759 respectively, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59232] Another function of GAM8297 is therefore inhibition of LOC221061 (Accession XP_167709.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221061.

[59233] LOC221405 (Accession XP_168138.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC221405 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221405, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221405 BINDING SITE, designated SEQ ID:8039, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59234] Another function of GAM8297 is therefore inhibition of LOC221405 (Accession XP_168138.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221405.

[59235] LOC253017 (Accession XP_171068.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC253017 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC253017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253017 BINDING SITE, designated SEQ ID:18869, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59236] Another function of GAM8297 is therefore inhibition of LOC253017 (Accession XP_171068.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253017.

[59237] LOC253392 (Accession XP_172857.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC253392 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC253392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253392 BINDING SITE, designated SEQ ID:8311, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59238] Another function of GAM8297 is therefore inhibition of LOC253392 (Accession XP_172857.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253392.

[59239] LOC254111 (Accession XP_171440.3) is another GAM8297 target gene, herein designated TARGET GENE. LOC254111 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC254111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC254111 BINDING SITE, designated SEQ ID:5139, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59240] Another function of GAM8297 is therefore inhibition of LOC254111 (Accession XP_171440.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254111.

[59241] LOC255167 (Accession XP_173156.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC255167 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC255167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255167 BINDING SITE, designated SEQ ID:7969, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59242] Another function of GAM8297 is therefore inhibition of LOC255167 (Accession XP_173156.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC255167.

[59243] LOC255975 (Accession XP_171083.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC255975 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC255975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE, designated SEQ ID:3149, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59244] Another function of GAM8297 is therefore inhibition of LOC255975 (Accession XP_171083.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255975.

[59245] LOC256905 (Accession XP_173031.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC256905 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256905, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256905 BINDING SITE, designated SEQ ID:18153, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59246] Another function of GAM8297 is therefore inhibition of LOC256905 (Accession XP_173031.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256905.

[59247] LOC257085 (Accession XP_173226.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC257085 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC257085, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC257085 BINDING SITE, designated SEQ ID:11089, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59248] Another function of GAM8297 is therefore inhibition of

LOC257085 (Accession XP_173226.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257085.

[59249] LOC283046 (Accession XP_208495.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283046 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283046 BINDING SITE, designated SEQ ID:7748, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59250] Another function of GAM8297 is therefore inhibition of LOC283046 (Accession XP_208495.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283046.

[59251] LOC283073 (Accession XP_210880.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283073 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC283073, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283073 BINDING SITE, designated SEQ ID:6474, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59252] Another function of GAM8297 is therefore inhibition of LOC283073 (Accession XP_210880.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283073.

[59253] LOC283168 (Accession XP_210910.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283168 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283168, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283168 BINDING SITE, designated SEQ ID:7758, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[59254] Another function of GAM8297 is therefore inhibition of LOC283168 (Accession XP_210910.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283168.

[59255] LOC283205 (Accession XP_210941.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283205 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283205 BINDING SITE, designated SEQ ID:12493, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59256] Another function of GAM8297 is therefore inhibition of LOC283205 (Accession XP_210941.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283205.

[59257] LOC283271 (Accession XP_208600.1) is another

GAM8297 target gene, herein designated TARGET GENE. LOC283271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283271 BINDING SITE, designated SEQ ID:17415, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59258] Another function of GAM8297 is therefore inhibition of LOC283271 (Accession XP_208600.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283271.

[59259] LOC283274 (Accession XP_210957.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283274 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283274, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283274 BINDING SITE, design-

nated SEQ ID:3938, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59260] Another function of GAM8297 is therefore inhibition of LOC283274 (Accession XP_210957.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283274.

[59261] LOC283376 (Accession XP_211002.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283376 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283376 BINDING SITE, designated SEQ ID:17261, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59262] Another function of GAM8297 is therefore inhibition of LOC283376 (Accession XP_211002.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283376.

[59263] LOC283532 (Accession XP_208096.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283532 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283532 BINDING SITE, designated SEQ ID:6241, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59264] Another function of GAM8297 is therefore inhibition of LOC283532 (Accession XP_208096.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283532.

[59265] LOC283534 (Accession XP_211083.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283534 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283534, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283534 BINDING SITE, designated SEQ ID:16651, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59266] Another function of GAM8297 is therefore inhibition of LOC283534 (Accession XP_211083.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283534.

[59267] LOC283744 (Accession XP_208817.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283744 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283744 BINDING SITE, designated SEQ ID:8051, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59268] Another function of GAM8297 is therefore inhibition of LOC283744 (Accession XP_208817.1) . Accordingly, utili-

ties of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283744.

[59269] LOC283776 (Accession XP_211196.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283776 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283776, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283776 BINDING SITE, designated SEQ ID:9843, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59270] Another function of GAM8297 is therefore inhibition of LOC283776 (Accession XP_211196.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283776.

[59271] LOC283778 (Accession XP_211199.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283778 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC283778, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283778 BINDING SITE, designated SEQ ID:13762, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59272] Another function of GAM8297 is therefore inhibition of LOC283778 (Accession XP_211199.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283778.

[59273] LOC283841 (Accession XP_211227.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283841 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283841 BINDING SITE, designated SEQ ID:10880, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59274] Another function of GAM8297 is therefore inhibition of LOC283841 (Accession XP_211227.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283841.

[59275] LOC283932 (Accession NP_787097.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC283932 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283932 BINDING SITE, designated SEQ ID:10210, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59276] Another function of GAM8297 is therefore inhibition of LOC283932 (Accession NP_787097.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283932.

[59277] LOC284015 (Accession XP_210324.1) is another GAM8297 target gene, herein designated TARGET GENE.

LOC284015 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284015, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284015 BINDING SITE, designated SEQ ID:14152, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59278] Another function of GAM8297 is therefore inhibition of LOC284015 (Accession XP_210324.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284015.

[59279] LOC284061 (Accession XP_211318.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284061 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284061 BINDING SITE, designated SEQ ID:6093, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59280] Another function of GAM8297 is therefore inhibition of LOC284061 (Accession XP_211318.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284061.

[59281] LOC284080 (Accession XP_211322.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284080 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284080, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284080 BINDING SITE, designated SEQ ID:875, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59282] Another function of GAM8297 is therefore inhibition of LOC284080 (Accession XP_211322.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284080.

[59283] LOC284095 (Accession XP_211324.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284095 BINDING SITE1 and LOC284095 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284095, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284095 BINDING SITE1 and LOC284095 BINDING SITE2, designated SEQ ID:812 and SEQ ID:3574 respectively, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59284] Another function of GAM8297 is therefore inhibition of LOC284095 (Accession XP_211324.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284095.

[59285] LOC284113 (Accession XP_209021.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284113 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284113 BINDING SITE, designated SEQ ID:8034, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59286] Another function of GAM8297 is therefore inhibition of LOC284113 (Accession XP_209021.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284113.

[59287] LOC284133 (Accession XP_211346.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284133 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284133, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284133 BINDING SITE, designated SEQ ID:7562, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59288] Another function of GAM8297 is therefore inhibition of LOC284133 (Accession XP_211346.1) . Accordingly, utili-

ties of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284133.

[59289] LOC284252 (Accession XP_209091.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284252 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284252, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284252 BINDING SITE, designated SEQ ID:17032, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59290] Another function of GAM8297 is therefore inhibition of LOC284252 (Accession XP_209091.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284252.

[59291] LOC284613 (Accession XP_209289.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284613 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC284613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284613 BINDING SITE, designated SEQ ID:6319, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59292] Another function of GAM8297 is therefore inhibition of LOC284613 (Accession XP_209289.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284613.

[59293] LOC284642 (Accession XP_208231.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284642 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284642, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284642 BINDING SITE, designated SEQ ID:1268, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59294] Another function of GAM8297 is therefore inhibition of LOC284642 (Accession XP_208231.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284642.

[59295] LOC284667 (Accession XP_010647.5) is another GAM8297 target gene, herein designated TARGET GENE. LOC284667 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC284667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284667 BINDING SITE, designated SEQ ID:16211, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59296] Another function of GAM8297 is therefore inhibition of LOC284667 (Accession XP_010647.5) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284667.

[59297] LOC284732 (Accession XP_211608.1) is another GAM8297 target gene, herein designated TARGET GENE.

LOC284732 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284732, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284732 BINDING SITE, designated SEQ ID:9135, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59298] Another function of GAM8297 is therefore inhibition of LOC284732 (Accession XP_211608.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284732.

[59299] LOC284930 (Accession XP_211692.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC284930 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284930, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284930 BINDING SITE, designated SEQ ID:11674, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59300] Another function of GAM8297 is therefore inhibition of LOC284930 (Accession XP_211692.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284930.

[59301] LOC285033 (Accession XP_211739.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285033 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285033 BINDING SITE, designated SEQ ID:13545, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59302] Another function of GAM8297 is therefore inhibition of LOC285033 (Accession XP_211739.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285033.

[59303] LOC285052 (Accession XP_211751.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285052 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285052 BINDING SITE, designated SEQ ID:20075, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59304] Another function of GAM8297 is therefore inhibition of LOC285052 (Accession XP_211751.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285052.

[59305] LOC285152 (Accession XP_211783.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285152 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285152 BINDING SITE, designated SEQ ID:20164, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59306] Another function of GAM8297 is therefore inhibition of LOC285152 (Accession XP_211783.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285152.

[59307] LOC285397 (Accession XP_211876.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285397 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285397 BINDING SITE, designated SEQ ID:5993, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59308] Another function of GAM8297 is therefore inhibition of LOC285397 (Accession XP_211876.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285397.

[59309] LOC285467 (Accession XP_211907.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285467 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285467 BINDING SITE, designated SEQ ID:19782, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59310] Another function of GAM8297 is therefore inhibition of LOC285467 (Accession XP_211907.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285467.

[59311] LOC285488 (Accession XP_211914.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285488 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285488, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285488 BINDING SITE, designated SEQ ID:15176, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59312] Another function of GAM8297 is therefore inhibition of LOC285488 (Accession XP_211914.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285488.

[59313] LOC285638 (Accession XP_209693.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285638 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285638, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285638 BINDING SITE, designated SEQ ID:12828, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59314] Another function of GAM8297 is therefore inhibition of

LOC285638 (Accession XP_209693.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285638.

[59315] LOC285708 (Accession XP_209729.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285708 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285708 BINDING SITE, designated SEQ ID:1780, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59316] Another function of GAM8297 is therefore inhibition of LOC285708 (Accession XP_209729.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285708.

[59317] LOC285843 (Accession XP_212034.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC285843 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC285843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285843 BINDING SITE, designated SEQ ID:679, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59318] Another function of GAM8297 is therefore inhibition of LOC285843 (Accession XP_212034.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285843.

[59319] LOC286044 (Accession XP_212150.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC286044 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286044, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286044 BINDING SITE, designated SEQ ID:5140, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[59320] Another function of GAM8297 is therefore inhibition of LOC286044 (Accession XP_212150.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286044.

[59321] LOC286055 (Accession XP_210815.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC286055 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286055, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286055 BINDING SITE, designated SEQ ID:4656, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59322] Another function of GAM8297 is therefore inhibition of LOC286055 (Accession XP_210815.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286055.

[59323] LOC286059 (Accession XP_212156.1) is another

GAM8297 target gene, herein designated TARGET GENE. LOC286059 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286059, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286059 BINDING SITE, designated SEQ ID:8210, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59324] Another function of GAM8297 is therefore inhibition of LOC286059 (Accession XP_212156.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286059.

[59325] LOC286402 (Accession XP_208415.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC286402 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286402 BINDING SITE, design-

nated SEQ ID:10137, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59326] Another function of GAM8297 is therefore inhibition of LOC286402 (Accession XP_208415.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286402.

[59327] LOC286532 (Accession XP_210093.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC286532 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286532 BINDING SITE, designated SEQ ID:4342, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59328] Another function of GAM8297 is therefore inhibition of LOC286532 (Accession XP_210093.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286532.

[59329] LOC338817 (Accession XP_290588.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC338817 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338817 BINDING SITE, designated SEQ ID:17184, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59330] Another function of GAM8297 is therefore inhibition of LOC338817 (Accession XP_290588.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338817.

[59331] LOC338913 (Accession XP_292272.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC338913 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338913, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338913 BINDING SITE, designated SEQ ID:4981, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59332] Another function of GAM8297 is therefore inhibition of LOC338913 (Accession XP_292272.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338913.

[59333] LOC339154 (Accession XP_294832.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339154 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339154 BINDING SITE, designated SEQ ID:11902, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59334] Another function of GAM8297 is therefore inhibition of LOC339154 (Accession XP_294832.1) . Accordingly, utili-

ties of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339154.

[59335] LOC339287 (Accession XP_290800.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339287 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339287, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339287 BINDING SITE, designated SEQ ID:19822, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59336] Another function of GAM8297 is therefore inhibition of LOC339287 (Accession XP_290800.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339287.

[59337] LOC339400 (Accession XP_294926.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339400 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC339400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339400 BINDING SITE, designated SEQ ID:2239, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59338] Another function of GAM8297 is therefore inhibition of LOC339400 (Accession XP_294926.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339400.

[59339] LOC339445 (Accession XP_291487.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339445 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339445 BINDING SITE, designated SEQ ID:14065, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59340] Another function of GAM8297 is therefore inhibition of LOC339445 (Accession XP_291487.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339445.

[59341] LOC339458 (Accession XP_290911.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339458 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339458 BINDING SITE, designated SEQ ID:11960, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59342] Another function of GAM8297 is therefore inhibition of LOC339458 (Accession XP_290911.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339458.

[59343] LOC339887 (Accession XP_295094.1) is another GAM8297 target gene, herein designated TARGET GENE.

LOC339887 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339887 BINDING SITE, designated SEQ ID:11787, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59344] Another function of GAM8297 is therefore inhibition of LOC339887 (Accession XP_295094.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339887.

[59345] LOC339942 (Accession XP_295107.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339942 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339942, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339942 BINDING SITE, designated SEQ ID:1575, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59346] Another function of GAM8297 is therefore inhibition of LOC339942 (Accession XP_295107.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339942.

[59347] LOC339978 (Accession XP_295116.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC339978 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339978, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339978 BINDING SITE, designated SEQ ID:9814, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59348] Another function of GAM8297 is therefore inhibition of LOC339978 (Accession XP_295116.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339978.

[59349] LOC341333 (Accession XP_296117.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC341333 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC341333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC341333 BINDING SITE, designated SEQ ID:18471, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59350] Another function of GAM8297 is therefore inhibition of LOC341333 (Accession XP_296117.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC341333.

[59351] LOC341867 (Accession XP_292256.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC341867 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC341867, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC341867 BINDING SITE, designated SEQ ID:17370, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59352] Another function of GAM8297 is therefore inhibition of LOC341867 (Accession XP_292256.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC341867.

[59353] LOC342490 (Accession XP_296905.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC342490 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC342490, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342490 BINDING SITE, designated SEQ ID:5255, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59354] Another function of GAM8297 is therefore inhibition of LOC342490 (Accession XP_296905.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC342490.

[59355] LOC342663 (Accession XP_297028.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC342663 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC342663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342663 BINDING SITE, designated SEQ ID:7400, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59356] Another function of GAM8297 is therefore inhibition of LOC342663 (Accession XP_297028.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC342663.

[59357] LOC343141 (Accession XP_291421.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC343141 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC343141, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343141 BINDING SITE, designated SEQ ID:3845, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59358] Another function of GAM8297 is therefore inhibition of LOC343141 (Accession XP_291421.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343141.

[59359] LOC343532 (Accession XP_291629.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC343532 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC343532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343532 BINDING SITE, designated SEQ ID:7356, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59360] Another function of GAM8297 is therefore inhibition of

LOC343532 (Accession XP_291629.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343532.

[59361] LOC345422 (Accession XP_298768.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC345422 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC345422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345422 BINDING SITE, designated SEQ ID:19581, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59362] Another function of GAM8297 is therefore inhibition of LOC345422 (Accession XP_298768.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345422.

[59363] LOC346351 (Accession XP_299473.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC346351 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC346351, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346351 BINDING SITE, designated SEQ ID:13991, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59364] Another function of GAM8297 is therefore inhibition of LOC346351 (Accession XP_299473.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346351.

[59365] LOC346430 (Accession XP_299501.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC346430 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC346430, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346430 BINDING SITE, designated SEQ ID:2854, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[59366] Another function of GAM8297 is therefore inhibition of LOC346430 (Accession XP_299501.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346430.

[59367] LOC348155 (Accession XP_211219.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC348155 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348155 BINDING SITE, designated SEQ ID:2548, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59368] Another function of GAM8297 is therefore inhibition of LOC348155 (Accession XP_211219.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348155.

[59369] LOC348525 (Accession XP_300778.1) is another

GAM8297 target gene, herein designated TARGET GENE. LOC348525 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348525, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348525 BINDING SITE, designated SEQ ID:11960, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59370] Another function of GAM8297 is therefore inhibition of LOC348525 (Accession XP_300778.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348525.

[59371] LOC348600 (Accession XP_300790.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC348600 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348600, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348600 BINDING SITE, design-

nated SEQ ID:10547, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59372] Another function of GAM8297 is therefore inhibition of LOC348600 (Accession XP_300790.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348600.

[59373] LOC349079 (Accession XP_302954.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349079 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349079 BINDING SITE, designated SEQ ID:17698, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59374] Another function of GAM8297 is therefore inhibition of LOC349079 (Accession XP_302954.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC349079.

[59375] LOC349213 (Accession XP_303002.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349213 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349213, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349213 BINDING SITE, designated SEQ ID:9993, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59376] Another function of GAM8297 is therefore inhibition of LOC349213 (Accession XP_303002.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349213.

[59377] LOC349262 (Accession XP_303011.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349262 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349262 BINDING SITE, designated SEQ ID:14405, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59378] Another function of GAM8297 is therefore inhibition of LOC349262 (Accession XP_303011.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349262.

[59379] LOC349269 (Accession XP_303012.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349269 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349269, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349269 BINDING SITE, designated SEQ ID:14405, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59380] Another function of GAM8297 is therefore inhibition of LOC349269 (Accession XP_303012.1) . Accordingly, utili-

ties of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349269.

[59381] LOC349288 (Accession XP_300476.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349288 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349288, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349288 BINDING SITE, designated SEQ ID:14140, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59382] Another function of GAM8297 is therefore inhibition of LOC349288 (Accession XP_300476.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349288.

[59383] LOC349291 (Accession XP_303017.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349291 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC349291, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349291 BINDING SITE, designated SEQ ID:14405, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59384] Another function of GAM8297 is therefore inhibition of LOC349291 (Accession XP_303017.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349291.

[59385] LOC349408 (Accession XP_303044.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC349408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349408 BINDING SITE, designated SEQ ID:2271, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59386] Another function of GAM8297 is therefore inhibition of LOC349408 (Accession XP_303044.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349408.

[59387] LOC350598 (Accession XP_304238.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC350598 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC350598, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350598 BINDING SITE, designated SEQ ID:3074, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59388] Another function of GAM8297 is therefore inhibition of LOC350598 (Accession XP_304238.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350598.

[59389] LOC51063 (Accession NP_057000.2) is another GAM8297 target gene, herein designated TARGET GENE. LOC51063

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC51063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51063 BINDING SITE, designated SEQ ID:17350, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59390] Another function of GAM8297 is therefore inhibition of LOC51063 (Accession NP_057000.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51063.

[59391] LOC90768 (Accession NP_849160.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC90768 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC90768, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90768 BINDING SITE, designated SEQ ID:4499, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[59392] Another function of GAM8297 is therefore inhibition of LOC90768 (Accession NP_849160.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90768.

[59393] LOC92606 (Accession XP_046097.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC92606 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92606 BINDING SITE, designated SEQ ID:1231, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59394] Another function of GAM8297 is therefore inhibition of LOC92606 (Accession XP_046097.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92606.

[59395] LOC93082 (Accession NP_612406.1) is another GAM8297 target gene, herein designated TARGET GENE. LOC93082

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC93082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93082 BINDING SITE, designated SEQ ID:16872, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59396] Another function of GAM8297 is therefore inhibition of LOC93082 (Accession NP_612406.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93082.

[59397] LYRIC (Accession NP_848927.1) is another GAM8297 target gene, herein designated TARGET GENE. LYRIC BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LYRIC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYRIC BINDING SITE, designated SEQ ID:7749, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59398] Another function of GAM8297 is therefore inhibition of LYRIC (Accession NP_848927.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYRIC.

[59399] LYRIC (Accession XP_043070.5) is another GAM8297 target gene, herein designated TARGET GENE. LYRIC BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LYRIC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYRIC BINDING SITE, designated SEQ ID:7749, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59400] Another function of GAM8297 is therefore inhibition of LYRIC (Accession XP_043070.5) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYRIC.

[59401] Mad, mothers against decapentaplegic homolog 7 (drosophila) (MADH7, Accession NP_005895.1) is another GAM8297 target gene, herein designated TARGET GENE. MADH7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MADH7, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADH7 BINDING SITE, designated SEQ ID:7744, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59402] Another function of GAM8297 is therefore inhibition of Mad, mothers against decapentaplegic homolog 7 (drosophila) (MADH7, Accession NP_005895.1), a gene which may affect transcription in response to TGF- β superfamily signaling pathways, inhibits BMP/Smad1 (MADH1) signaling and therefore may be associated with Scleroderma. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Scleroderma, and of other diseases and clinical conditions associated with MADH7.

[59403] The function of MADH7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1. Mitogen-activated protein kinase kinase 3 (MAP2K3, Accession NP_002747.2) is another GAM8297 target gene, herein designated TARGET GENE. MAP2K3 BINDING SITE is a target binding site found in the 5' un-

translated region of multiple transcripts of mRNA encoded by MAP2K3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K3 BINDING SITE, designated SEQ ID:7679, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59404] Another function of GAM8297 is therefore inhibition of Mitogen-activated protein kinase kinase 3 (MAP2K3, Accession NP_002747.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K3.

[59405] Mitogen-activated protein kinase-activated protein kinase 3 (MAPKAPK3, Accession NP_004626.1) is another GAM8297 target gene, herein designated TARGET GENE. MAPKAPK3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAPKAPK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPKAPK3 BINDING SITE, designated SEQ ID:1041, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59406] Another function of GAM8297 is therefore inhibition of Mitogen-activated protein kinase-activated protein kinase 3 (MAPKAPK3, Accession NP_004626.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPKAPK3.

[59407] Mutated in colorectal cancers (MCC, Accession NP_002378.1) is another GAM8297 target gene, herein designated TARGET GENE. MCC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MCC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCC BINDING SITE, designated SEQ ID:5308, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59408] Another function of GAM8297 is therefore inhibition of Mutated in colorectal cancers (MCC, Accession NP_002378.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with MCC.

[59409] MDA5 (Accession NP_071451.2) is another GAM8297 target gene, herein designated TARGET GENE. MDA5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MDA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDA5 BINDING SITE, designated SEQ ID:15518, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59410] Another function of GAM8297 is therefore inhibition of MDA5 (Accession NP_071451.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDA5.

[59411] Mesoderm development candidate 1 (MESDC1, Accession NP_072088.1) is another GAM8297 target gene, herein designated TARGET GENE. MESDC1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MESDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MESDC1 BIND-

ING SITE, designated SEQ ID:17738, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59412] Another function of GAM8297 is therefore inhibition of Mesoderm development candidate 1 (MESDC1, Accession NP_072088.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MESDC1.

[59413] MGC10646 (Accession NP_116082.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC10646 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC10646, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10646 BINDING SITE, designated SEQ ID:8894, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59414] Another function of GAM8297 is therefore inhibition of MGC10646 (Accession NP_116082.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10646.

[59415] MGC10818 (Accession NP_085045.2) is another GAM8297 target gene, herein designated TARGET GENE. MGC10818 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC10818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10818 BINDING SITE, designated SEQ ID:2986, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59416] Another function of GAM8297 is therefore inhibition of MGC10818 (Accession NP_085045.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10818.

[59417] MGC10981 (Accession NP_116043.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC10981 BINDING SITE1 and MGC10981 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC10981, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10981 BINDING SITE1

and MGC10981 BINDING SITE2, designated SEQ ID:5612 and SEQ ID:1625 respectively, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59418] Another function of GAM8297 is therefore inhibition of MGC10981 (Accession NP_116043.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10981.

[59419] MGC12904 (Accession NP_112496.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC12904 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC12904, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12904 BINDING SITE, designated SEQ ID:6475, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59420] Another function of GAM8297 is therefore inhibition of MGC12904 (Accession NP_112496.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC12904.

[59421] MGC12966 (Accession NP_116095.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC12966 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC12966, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12966 BINDING SITE, designated SEQ ID:4628, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59422] Another function of GAM8297 is therefore inhibition of MGC12966 (Accession NP_116095.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12966.

[59423] MGC13047 (Accession NP_116098.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC13047 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC13047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC13047 BINDING SITE, designated SEQ ID:13016, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59424] Another function of GAM8297 is therefore inhibition of MGC13047 (Accession NP_116098.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13047.

[59425] MGC14832 (Accession NP_115715.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC14832 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14832, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14832 BINDING SITE, designated SEQ ID:11725, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59426] Another function of GAM8297 is therefore inhibition of MGC14832 (Accession NP_115715.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14832.

[59427] MGC16291 (Accession NP_116159.2) is another GAM8297 target gene, herein designated TARGET GENE. MGC16291 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC16291, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16291 BINDING SITE, designated SEQ ID:1591, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59428] Another function of GAM8297 is therefore inhibition of MGC16291 (Accession NP_116159.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16291.

[59429] MGC16638 (Accession NP_777593.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC16638 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC16638, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16638 BINDING SITE, designated SEQ ID:13782, to

the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59430] Another function of GAM8297 is therefore inhibition of MGC16638 (Accession NP_777593.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16638.

[59431] MGC20460 (Accession NP_444271.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC20460 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC20460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20460 BINDING SITE, designated SEQ ID:14116, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59432] Another function of GAM8297 is therefore inhibition of MGC20460 (Accession NP_444271.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20460.

[59433] MGC2452 (Accession NP_116033.1) is another GAM8297

target gene, herein designated TARGET GENE. MGC2452 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC2452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2452 BINDING SITE, designated SEQ ID:10266, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59434] Another function of GAM8297 is therefore inhibition of MGC2452 (Accession NP_116033.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2452.

[59435] MGC26706 (Accession NP_689794.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC26706 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC26706, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC26706 BINDING SITE, designated SEQ ID:5445, to the nucleotide sequence of GAM8297 RNA, herein designated

GAM RNA, also designated SEQ ID:367.

[59436] Another function of GAM8297 is therefore inhibition of MGC26706 (Accession NP_689794.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC26706.

[59437] MGC3067 (Accession NP_077271.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC3067 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3067, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3067 BINDING SITE, designated SEQ ID:13227, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59438] Another function of GAM8297 is therefore inhibition of MGC3067 (Accession NP_077271.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3067.

[59439] MGC33182 (Accession NP_660204.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC33182

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC33182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33182 BINDING SITE, designated SEQ ID:17019, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59440] Another function of GAM8297 is therefore inhibition of MGC33182 (Accession NP_660204.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33182.

[59441] MGC33202 (Accession NP_775811.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC33202 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC33202, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33202 BINDING SITE, designated SEQ ID:17059, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59442] Another function of GAM8297 is therefore inhibition of MGC33202 (Accession NP_775811.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33202.

[59443] MGC39696 (Accession NP_689984.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC39696 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC39696, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39696 BINDING SITE, designated SEQ ID:13115, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59444] Another function of GAM8297 is therefore inhibition of MGC39696 (Accession NP_689984.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39696.

[59445] MGC40053 (Accession NP_689796.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC40053 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC40053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40053 BINDING SITE, designated SEQ ID:16179, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59446] Another function of GAM8297 is therefore inhibition of MGC40053 (Accession NP_689796.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40053.

[59447] MGC45408 (Accession NP_689502.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC45408 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC45408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45408 BINDING SITE, designated SEQ ID:2651, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59448] Another function of GAM8297 is therefore inhibition of

MGC45408 (Accession NP_689502.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45408.

[59449] MGC45840 (Accession NP_775855.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC45840 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC45840, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45840 BINDING SITE, designated SEQ ID:19671, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59450] Another function of GAM8297 is therefore inhibition of MGC45840 (Accession NP_775855.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45840.

[59451] MGC4737 (Accession NP_113654.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC4737 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC4737, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4737 BINDING SITE, designated SEQ ID:4951, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59452] Another function of GAM8297 is therefore inhibition of MGC4737 (Accession NP_113654.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4737.

[59453] MGC4796 (Accession NP_114406.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC4796 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MGC4796, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4796 BINDING SITE, designated SEQ ID:4380, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59454] Another function of GAM8297 is therefore inhibition of

MGC4796 (Accession NP_114406.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4796.

[59455] MGC5391 (Accession NP_116129.2) is another GAM8297 target gene, herein designated TARGET GENE. MGC5391 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC5391, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5391 BINDING SITE, designated SEQ ID:13373, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59456] Another function of GAM8297 is therefore inhibition of MGC5391 (Accession NP_116129.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5391.

[59457] MGC5508 (Accession NP_076997.1) is another GAM8297 target gene, herein designated TARGET GENE. MGC5508 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC5508, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5508 BINDING SITE, designated SEQ ID:4031, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59458] Another function of GAM8297 is therefore inhibition of MGC5508 (Accession NP_076997.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5508.

[59459] MIRO-2 (Accession NP_620124.1) is another GAM8297 target gene, herein designated TARGET GENE. MIRO-2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MIRO-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIRO-2 BINDING SITE, designated SEQ ID:10083, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59460] Another function of GAM8297 is therefore inhibition of MIRO-2 (Accession NP_620124.1) . Accordingly, utilities

of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIRO-2.

[59461] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) is another GAM8297 target gene, herein designated TARGET GENE. MLC1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:1467, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59462] Another function of GAM8297 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[59463] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another

GAM8297 target gene, herein designated TARGET GENE. MLC1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:1467, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59464] Another function of GAM8297 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[59465] Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) is another GAM8297 target gene, herein designated TARGET GENE. MRPS27 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MRPS27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of MRPS27 BINDING SITE, designated SEQ ID:15026, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59466] Another function of GAM8297 is therefore inhibition of Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS27.

[59467] MSTP028 (Accession NP_114160.1) is another GAM8297 target gene, herein designated TARGET GENE. MSTP028 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MSTP028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSTP028 BINDING SITE, designated SEQ ID:2725, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59468] Another function of GAM8297 is therefore inhibition of MSTP028 (Accession NP_114160.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MSTP028.

[59469] Methylene tetrahydrofolate dehydrogenase (nad⁺ dependent), methenyltetrahydrofolate cyclohydrolase (MTHFD2, Accession NP_006627.1) is another GAM8297 target gene, herein designated TARGET GENE. MTHFD2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MTHFD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTHFD2 BINDING SITE, designated SEQ ID:11949, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59470] Another function of GAM8297 is therefore inhibition of Methylene tetrahydrofolate dehydrogenase (nad⁺ dependent), methenyltetrahydrofolate cyclohydrolase (MTHFD2, Accession NP_006627.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTHFD2.

[59471] Mucin 6, gastric (MUC6, Accession XP_290540.1) is another GAM8297 target gene, herein designated TARGET GENE. MUC6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MUC6,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MUC6 BINDING SITE, designated SEQ ID:5705, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59472] Another function of GAM8297 is therefore inhibition of Mucin 6, gastric (MUC6, Accession XP_290540.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MUC6.

[59473] Myosin id (MYO1D, Accession XP_050041.4) is another GAM8297 target gene, herein designated TARGET GENE. MYO1D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYO1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO1D BINDING SITE, designated SEQ ID:12931, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59474] Another function of GAM8297 is therefore inhibition of Myosin id (MYO1D, Accession XP_050041.4), a gene which

is an unconventional myosin. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYO1D.

[59475] The function of MYO1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM227.1. Myosin iia (MYO3A, Accession NP_059129.2) is another GAM8297 target gene, herein designated TARGET GENE. MYO3A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYO3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO3A BINDING SITE, designated SEQ ID:9274, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59476] Another function of GAM8297 is therefore inhibition of Myosin iia (MYO3A, Accession NP_059129.2), a gene which may have a role in photoreceptor function and/or maintenance. and therefore is associated with Deafness, autosomal recessive 30. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Deafness,

autosomal recessive 30., and of other diseases and clinical conditions associated with MYO3A.

[59477] The function of MYO3A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1195.1. Myozenin 2 (MYOZ2, Accession NP_057683.1) is another GAM8297 target gene, herein designated TARGET GENE. MYOZ2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MYOZ2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYOZ2 BINDING SITE, designated SEQ ID:7556, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59478] Another function of GAM8297 is therefore inhibition of Myozenin 2 (MYOZ2, Accession NP_057683.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYOZ2.

[59479] Neuron navigator 3 (NAV3, Accession NP_055718.2) is another GAM8297 target gene, herein designated TARGET

GENE. NAV3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NAV3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAV3 BINDING SITE, designated SEQ ID:5758, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59480] Another function of GAM8297 is therefore inhibition of Neuron navigator 3 (NAV3, Accession NP_055718.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAV3.

[59481] Norrie disease (pseudoglioma) (NDP, Accession NP_000257.1) is another GAM8297 target gene, herein designated TARGET GENE. NDP BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by NDP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDP BINDING SITE, designated SEQ ID:17354, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ

ID:367.

[59482] Another function of GAM8297 is therefore inhibition of Norrie disease (pseudoglioma) (NDP, Accession NP_000257.1), a gene which may be involved in a pathway that regulates neural cell differentiation and proliferation and therefore is associated with Norrie disease (nd), familial exudative vitreoretinopathy . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Norrie disease (nd), familial exudative vitreoretinopathy ., and of other diseases and clinical conditions associated with NDP.

[59483] The function of NDP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Neuropilin (nrp) and tolloid (tll)-like 1 (NETO1, Accession NP_620552.1) is another GAM8297 target gene, herein designated TARGET GENE. NETO1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NETO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NETO1 BINDING SITE, designated

SEQ ID:3758, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59484] Another function of GAM8297 is therefore inhibition of Neuropilin (nrp) and tolloid (tll)-like 1 (NETO1, Accession NP_620552.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NETO1.

[59485] Nuclear factor of kappa light polypeptide gene enhancer in b-cells inhibitor-like 1 (NFKBIL1, Accession NP_004998.2) is another GAM8297 target gene, herein designated TARGET GENE. NFKBIL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NFKBIL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFKBIL1 BINDING SITE, designated SEQ ID:7331, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59486] Another function of GAM8297 is therefore inhibition of Nuclear factor of kappa light polypeptide gene enhancer in b-cells inhibitor-like 1 (NFKBIL1, Accession

NP_004998.2), a gene which is similar to the I kappa B family of proteins and contains ankyrin repeats. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFKBIL1.

[59487] The function of NFKBIL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM500.1. Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2) is another GAM8297 target gene, herein designated TARGET GENE. NKTR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NKTR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKTR BINDING SITE, designated SEQ ID:4907, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59488] Another function of GAM8297 is therefore inhibition of Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2), a gene which is involved in the function of nk cells. Accordingly, utilities of GAM8297 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with NKTR.

[59489] The function of NKTR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM467.2.NLI-IF (Accession NP_067021.1) is another GAM8297 target gene, herein designated TARGET GENE. NLI-IF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NLI-IF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NLI-IF BINDING SITE, designated SEQ ID:15666, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59490] Another function of GAM8297 is therefore inhibition of NLI-IF (Accession NP_067021.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLI-IF.

[59491] Niemann-pick disease, type c2 (NPC2, Accession NP_006423.1) is another GAM8297 target gene, herein designated TARGET GENE. NPC2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by NPC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPC2 BINDING SITE, designated SEQ ID:14591, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59492] Another function of GAM8297 is therefore inhibition of Niemann–pick disease, type c2 (NPC2, Accession NP_006423.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPC2.

[59493] NSG–X (Accession NP_055226.1) is another GAM8297 target gene, herein designated TARGET GENE. NSG–X BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NSG–X, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NSG–X BINDING SITE, designated SEQ ID:2106, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59494] Another function of GAM8297 is therefore inhibition of

NSG-X (Accession NP_055226.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NSG-X.

[59495] Neurexophilin 3 (NXPH3, Accession NP_009156.1) is another GAM8297 target gene, herein designated TARGET GENE. NXPH3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NXPH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NXPH3 BINDING SITE, designated SEQ ID:12898, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59496] Another function of GAM8297 is therefore inhibition of Neurexophilin 3 (NXPH3, Accession NP_009156.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NXPH3.

[59497] NYD-SP11 (Accession NP_114157.2) is another GAM8297 target gene, herein designated TARGET GENE. NYD-SP11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NYD-SP11, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NYD-SP11 BINDING SITE, designated SEQ ID:9259, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59498] Another function of GAM8297 is therefore inhibition of NYD-SP11 (Accession NP_114157.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NYD-SP11.

[59499] 2'-5'-oligoadenylate synthetase 3, 100kda (OAS3, Accession NP_006178.1) is another GAM8297 target gene, herein designated TARGET GENE. OAS3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by OAS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OAS3 BINDING SITE, designated SEQ ID:3720, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59500] Another function of GAM8297 is therefore inhibition of

2'-5'-oligoadenylate synthetase 3, 100kda (OAS3, Accession NP_006178.1), a gene which may play a role in mediating resistance to virus infection, control of cell growth, differentiation, and apoptosis. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OAS3.

[59501] The function of OAS3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Purinergic receptor p2x, ligand-gated ion channel, 1 (P2RX1, Accession NP_002549.1) is another GAM8297 target gene, herein designated TARGET GENE. P2RX1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by P2RX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX1 BINDING SITE, designated SEQ ID:2491, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59502] Another function of GAM8297 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 1 (P2RX1, Accession NP_002549.1). Accordingly, utilities of

GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RX1.

[59503] Protocadherin 11 x-linked (PCDH11X, Accession NP_116751.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDH11X BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDH11X, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11X BINDING SITE, designated SEQ ID:11504, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59504] Another function of GAM8297 is therefore inhibition of Protocadherin 11 x-linked (PCDH11X, Accession NP_116751.1), a gene which is thought to play a fundamental role in cell-cell recognition essential for the segmental development and function of the central nervous system. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11X.

[59505] The function of PCDH11X and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.2. Protocadherin 11 x-linked (PCDH11X, Accession NP_116750.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDH11X BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDH11X, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11X BINDING SITE, designated SEQ ID:11504, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59506] Another function of GAM8297 is therefore inhibition of Protocadherin 11 x-linked (PCDH11X, Accession NP_116750.1), a gene which is thought to play a fundamental role in cell-cell recognition essential for the segmental development and function of the central nervous system. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11X.

[59507] The function of PCDH11X and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.2. Protocadherin 11 γ -linked (PCDH11Y, Accession NP_116755.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDH11Y BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDH11Y, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11Y BINDING SITE, designated SEQ ID:11504, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59508] Another function of GAM8297 is therefore inhibition of Protocadherin 11 γ -linked (PCDH11Y, Accession NP_116755.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11Y.

[59509] Protocadherin gamma subfamily a, 1 (PCDHGA1, Accession NP_061735.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGA1, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA1 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59510] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 1 (PCDHGA1, Accession NP_061735.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA1.

[59511] Protocadherin gamma subfamily a, 10 (PCDHGA10, Accession NP_061736.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGA10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA10 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59512] Another function of GAM8297 is therefore inhibition of

Protocadherin gamma subfamily a, 10 (PCDHGA10, Accession NP_061736.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA10.

[59513] Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_061737.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA11 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59514] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_061737.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA11.

[59515] Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_114481.1) is another GAM8297 target gene,

herein designated TARGET GENE. PCDHGA11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA11 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59516] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_114481.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA11.

[59517] Protocadherin gamma subfamily a, 12 (PCDHGA12, Accession NP_003726.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA12 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of PCDHGA12 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59518] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 12 (PCDHGA12, Accession NP_003726.1), a gene which potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA12.

[59519] The function of PCDHGA12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily a, 2 (PCDHGA2, Accession NP_061738.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA2 BINDING SITE, designated

SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59520] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 2 (PCDHGA2, Accession NP_061738.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA2.

[59521] Protocadherin gamma subfamily a, 3 (PCDHGA3, Accession NP_061739.2) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA3 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59522] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 3 (PCDHGA3, Accession NP_061739.2), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of

GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA3.

[59523] The function of PCDHGA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily a, 4 (PCDHGA4, Accession NP_061740.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA4 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA4 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59524] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 4 (PCDHGA4, Accession NP_061740.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA4.

[59525] Protocadherin gamma subfamily a, 5 (PCDHGA5, Acces-

sion NP_061741.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA5 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59526] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 5 (PCDHGA5, Accession NP_061741.1), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA5.

[59527] The function of PCDHGA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily a, 6 (PCDHGA6, Accession NP_061742.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA6 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by PCDHGA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA6 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59528] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 6 (PCDHGA6, Accession NP_061742.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA6.

[59529] Protocadherin gamma subfamily a, 7 (PCDHGA7, Accession NP_061743.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA7 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ

ID:367.

[59530] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 7 (PCDHGA7, Accession NP_061743.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA7.

[59531] Protocadherin gamma subfamily a, 8 (PCDHGA8, Accession NP_114477.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA8 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGA8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA8 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59532] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 8 (PCDHGA8, Accession NP_114477.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with PCDHGA8.

[59533] The function of PCDHGA8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily a, 9 (PCDHGA9, Accession NP_061744.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGA9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGA9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA9 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59534] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily a, 9 (PCDHGA9, Accession NP_061744.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA9.

[59535] Protocadherin gamma subfamily b, 1 (PCDHGB1, Accession NP_061745.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB1 BINDING SITE

is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB1 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59536] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 1 (PCDHGB1, Accession NP_061745.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB1.

[59537] Protocadherin gamma subfamily b, 2 (PCDHGB2, Accession NP_061746.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB2 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA,

also designated SEQ ID:367.

[59538] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 2 (PCDHGB2, Accession NP_061746.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB2.

[59539] Protocadherin gamma subfamily b, 3 (PCDHGB3, Accession NP_061747.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB3 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59540] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 3 (PCDHGB3, Accession NP_061747.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB3.

[59541] Protocadherin gamma subfamily b, 4 (PCDHGB4, Acces-

sion NP_003727.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB4 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59542] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 4 (PCDHGB4, Accession NP_003727.1), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB4.

[59543] The function of PCDHGB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily b, 5 (PCDHGB5, Accession NP_061748.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB5 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by PCDHGB5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB5 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59544] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 5 (PCDHGB5, Accession NP_061748.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB5.

[59545] Protocadherin gamma subfamily b, 6 (PCDHGB6, Accession NP_061749.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB6 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59546] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 6 (PCDHGB6, Accession NP_061749.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB6.

[59547] Protocadherin gamma subfamily b, 7 (PCDHGB7, Accession NP_061750.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGB7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGB7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB7 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59548] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily b, 7 (PCDHGB7, Accession NP_061750.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB7.

[59549] The function of PCDHGB7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_115779.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC3 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59550] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_115779.1), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC3.

[59551] The function of PCDHGC3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_002579.2) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHGC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC3 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59552] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_002579.2), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC3.

[59553] The function of PCDHGC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 4

(PCDHGC4, Accession NP_061751.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGC4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHGC4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC4 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59554] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily c, 4 (PCDHGC4, Accession NP_061751.1), a gene which is a potential calcium-dependent cell-adhesion protein. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC4.

[59555] The function of PCDHGC4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Protocadherin gamma subfamily c, 5 (PCDHGC5, Accession NP_061752.1) is another GAM8297 target gene, herein designated TARGET GENE. PCDHGC5 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by PCDHGC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC5 BINDING SITE, designated SEQ ID:3215, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59556] Another function of GAM8297 is therefore inhibition of Protocadherin gamma subfamily c, 5 (PCDHGC5, Accession NP_061752.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC5.

[59557] Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1) is another GAM8297 target gene, herein designated TARGET GENE. PDGFRB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDGFRB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDGFRB BINDING SITE, designated SEQ ID:10084, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59558] Another function of GAM8297 is therefore inhibition of Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1), a gene which Platelet-derived growth factor receptor beta chain; tyrosine kinase receptor. and therefore may be associated with Chronic myeloproliferative diseases. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Chronic myeloproliferative diseases, and of other diseases and clinical conditions associated with PDGFRB.

[59559] The function of PDGFRB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM579.1. Pelota homolog (drosophila) (PELO, Accession NP_057030.2) is another GAM8297 target gene, herein designated TARGET GENE. PELO BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PELO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PELO BINDING SITE, designated SEQ ID:2948, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59560] Another function of GAM8297 is therefore inhibition of Pelota homolog (drosophila) (PELO, Accession NP_057030.2), a gene which may has a role in spermatogenesis, mitotic division, and patterning. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PELO.

[59561] The function of PELO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM702.1. Prohibitin (PHB, Accession NP_002625.1) is another GAM8297 target gene, herein designated TARGET GENE. PHB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PHB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHB BINDING SITE, designated SEQ ID:9136, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59562] Another function of GAM8297 is therefore inhibition of Prohibitin (PHB, Accession NP_002625.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with PHB.

[59563] Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) is another GAM8297 target gene, herein designated TARGET GENE. PIGR BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PIGR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGR BINDING SITE, designated SEQ ID:15327, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59564] Another function of GAM8297 is therefore inhibition of Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGR.

[59565] Pim-2 oncogene (PIM2, Accession NP_006866.1) is another GAM8297 target gene, herein designated TARGET GENE. PIM2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PIM2, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIM2 BINDING SITE, designated SEQ ID:12815, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59566] Another function of GAM8297 is therefore inhibition of Pim-2 oncogene (PIM2, Accession NP_006866.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIM2.

[59567] Pleiomorphic adenoma gene 1 (PLAG1, Accession NP_002646.1) is another GAM8297 target gene, herein designated TARGET GENE. PLAG1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PLAG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLAG1 BINDING SITE, designated SEQ ID:12375, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59568] Another function of GAM8297 is therefore inhibition of Pleiomorphic adenoma gene 1 (PLAG1, Accession

NP_002646.1), a gene which contains a zinc finger domain. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLAG1.

[59569] The function of PLAG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.PP2CE (Accession NP_640338.1) is another GAM8297 target gene, herein designated TARGET GENE. PP2CE BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PP2CE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP2CE BINDING SITE, designated SEQ ID:6865, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59570] Another function of GAM8297 is therefore inhibition of PP2CE (Accession NP_640338.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP2CE.

[59571] Phosphatidic acid phosphatase type 2b (PPAP2B, Accession NP_803133.1) is another GAM8297 target gene,

herein designated TARGET GENE. PPAP2B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPAP2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2B BINDING SITE, designated SEQ ID:4950, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59572] Another function of GAM8297 is therefore inhibition of Phosphatidic acid phosphatase type 2b (PPAP2B, Accession NP_803133.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2B.

[59573] Phosphatidic acid phosphatase type 2b (PPAP2B, Accession NP_003704.3) is another GAM8297 target gene, herein designated TARGET GENE. PPAP2B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPAP2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2B BINDING SITE, designated SEQ ID:4950, to the

nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59574] Another function of GAM8297 is therefore inhibition of Phosphatidic acid phosphatase type 2b (PPAP2B, Accession NP_003704.3) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2B.

[59575] Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_572028.1) is another GAM8297 target gene, herein designated TARGET GENE. PPIL3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PPIL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL3 BINDING SITE, designated SEQ ID:2401, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59576] Another function of GAM8297 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_572028.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL3.

[59577] Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_115861.1) is another GAM8297 target gene, herein designated TARGET GENE. PPIL3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PPIL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL3 BINDING SITE, designated SEQ ID:2401, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59578] Another function of GAM8297 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_115861.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL3.

[59579] Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_570981.1) is another GAM8297 target gene, herein designated TARGET GENE. PPIL3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PPIL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PPIL3 BINDING SITE, designated SEQ ID:2401, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59580] Another function of GAM8297 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 3 (PPIL3, Accession NP_570981.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL3.

[59581] Protein phosphatase 1f (pp2c domain containing) (PPM1F, Accession NP_055449.1) is another GAM8297 target gene, herein designated TARGET GENE. PPM1F BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPM1F, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPM1F BINDING SITE, designated SEQ ID:13090, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59582] Another function of GAM8297 is therefore inhibition of Protein phosphatase 1f (pp2c domain containing) (PPM1F, Accession NP_055449.1) . Accordingly, utilities of

GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPM1F.

[59583] Pr domain containing 1, with znf domain (PRDM1, Accession NP_001189.1) is another GAM8297 target gene, herein designated TARGET GENE. PRDM1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PRDM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRDM1 BINDING SITE, designated SEQ ID:6451, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59584] Another function of GAM8297 is therefore inhibition of Pr domain containing 1, with znf domain (PRDM1, Accession NP_001189.1), a gene which may be involved in transcriptional regulation and is critical for commitment to a plasma cell fate. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRDM1.

[59585] The function of PRDM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM2205.1.Prion protein 2 (dublet) (PRND, Accession NP_036541.1) is another GAM8297 target gene, herein designated TARGET GENE. PRND BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRND BINDING SITE, designated SEQ ID:937, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59586] Another function of GAM8297 is therefore inhibition of Prion protein 2 (dublet) (PRND, Accession NP_036541.1), a gene which is similar to prion protein PRNP. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRND.

[59587] The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.PRO0149 (Accession NP_054836.1) is another GAM8297 target gene, herein designated TARGET GENE. PRO0149 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

PRO0149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0149 BINDING SITE, designated SEQ ID:7715, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59588] Another function of GAM8297 is therefore inhibition of PRO0149 (Accession NP_054836.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0149.

[59589] Prostein (Accession NP_149093.1) is another GAM8297 target gene, herein designated TARGET GENE. Prostein BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by Prostein, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Prostein BINDING SITE, designated SEQ ID:10314, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59590] Another function of GAM8297 is therefore inhibition of

Prostein (Accession NP_149093.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Prostein.

[59591] Periaxin (PRX, Accession NP_066007.1) is another GAM8297 target gene, herein designated TARGET GENE. PRX BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRX BINDING SITE, designated SEQ ID:13569, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59592] Another function of GAM8297 is therefore inhibition of Periaxin (PRX, Accession NP_066007.1), a gene which seems to be required for maintenance of peripheral nerve myelin sheath. may have a role in axon- glial interactions, possibly by interacting with the cytoplasmic domains of integral membrane proteins such as myelin- associated glycoprotein in the periaxonal regions of the schwann cell plasma membrane. may have a role in the early phases of myelin deposition and therefore is associated with Dejer-

ine- sotta neuropathy, autosomal recessive. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Dejerine- sotta neuropathy, autosomal recessive, and of other diseases and clinical conditions associated with PRX.

[59593] The function of PRX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Pleckstrin homology, sec7 and coiled/coil domains 1 (cytohesin 1) (PSCD1, Accession NP_059430.1) is another GAM8297 target gene, herein designated TARGET GENE. PSCD1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PSCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSCD1 BINDING SITE, designated SEQ ID:20040, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59594] Another function of GAM8297 is therefore inhibition of Pleckstrin homology, sec7 and coiled/coil domains 1 (cytohesin 1) (PSCD1, Accession NP_059430.1). Accord-

ingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSCD1.

[59595] Pleckstrin homology, sec7 and coiled/coil domains 1(cytohesin 1) (PSCD1, Accession NP_004753.1) is another GAM8297 target gene, herein designated TARGET GENE. PSCD1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PSCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSCD1 BINDING SITE, designated SEQ ID:20040, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59596] Another function of GAM8297 is therefore inhibition of Pleckstrin homology, sec7 and coiled/coil domains 1(cytohesin 1) (PSCD1, Accession NP_004753.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSCD1.

[59597] Protein tyrosine phosphatase type iva, member 1 (PTP4A1, Accession NP_003454.1) is another GAM8297 target gene,

herein designated TARGET GENE. PTP4A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTP4A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTP4A1 BINDING SITE, designated SEQ ID:7509, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59598] Another function of GAM8297 is therefore inhibition of Protein tyrosine phosphatase type iva, member 1 (PTP4A1, Accession NP_003454.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTP4A1.

[59599] Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_573439.1) is another GAM8297 target gene, herein designated TARGET GENE. PTPRU BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTPRU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRU BINDING SITE, designated SEQ ID:3003, to the nu-

cleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59600] Another function of GAM8297 is therefore inhibition of Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_573439.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRU.

[59601] Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_573438.1) is another GAM8297 target gene, herein designated TARGET GENE. PTPRU BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTPRU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRU BINDING SITE, designated SEQ ID:3003, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59602] Another function of GAM8297 is therefore inhibition of Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_573438.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRU.

[59603] Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_005695.2) is another GAM8297 target gene, herein designated TARGET GENE. PTPRU BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTPRU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRU BINDING SITE, designated SEQ ID:3003, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59604] Another function of GAM8297 is therefore inhibition of Protein tyrosine phosphatase, receptor type, u (PTPRU, Accession NP_005695.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRU.

[59605] PYC1 (Accession NP_690865.1) is another GAM8297 target gene, herein designated TARGET GENE. PYC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PYC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYC1 BINDING

SITE, designated SEQ ID:15258, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59606] Another function of GAM8297 is therefore inhibition of PYC1 (Accession NP_690865.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYC1.

[59607] RAB-R (Accession NP_006067.2) is another GAM8297 target gene, herein designated TARGET GENE. RAB-R BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB-R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB-R BINDING SITE, designated SEQ ID:14904, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59608] Another function of GAM8297 is therefore inhibition of RAB-R (Accession NP_006067.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB-R.

[59609] Retinoic acid induced 1 (RAI1, Accession NP_109590.2) is another GAM8297 target gene, herein designated TARGET

GENE. RAI1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RAI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI1 BINDING SITE, designated SEQ ID:5307, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

- [59610] Another function of GAM8297 is therefore inhibition of Retinoic acid induced 1 (RAI1, Accession NP_109590.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI1.
- [59611] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) is another GAM8297 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:8667, to the

nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59612] Another function of GAM8297 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[59613] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) is another GAM8297 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:8667, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59614] Another function of GAM8297 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[59615] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) is another GAM8297 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:8667, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59616] Another function of GAM8297 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[59617] Rna binding motif protein 3 (RBM3, Accession NP_006734.1) is another GAM8297 target gene, herein designated TARGET GENE. RBM3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RBM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of RBM3 BINDING SITE, designated SEQ ID:9588, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59618] Another function of GAM8297 is therefore inhibition of Rna binding motif protein 3 (RBM3, Accession NP_006734.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBM3.

[59619] RDH-E2 (Accession NP_620419.1) is another GAM8297 target gene, herein designated TARGET GENE. RDH-E2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RDH-E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDH-E2 BINDING SITE, designated SEQ ID:6845, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59620] Another function of GAM8297 is therefore inhibition of RDH-E2 (Accession NP_620419.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDH-

E2.

[59621] Ras-like, estrogen-regulated, growth-inhibitor (RERG, Accession NP_116307.1) is another GAM8297 target gene, herein designated TARGET GENE. RERG BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RERG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RERG BINDING SITE, designated SEQ ID:16494, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59622] Another function of GAM8297 is therefore inhibition of Ras-like, estrogen-regulated, growth-inhibitor (RERG, Accession NP_116307.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RERG.

[59623] RGL (Accession NP_055964.2) is another GAM8297 target gene, herein designated TARGET GENE. RGL BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RGL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of RGL BINDING SITE, designated SEQ ID:5364, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59624] Another function of GAM8297 is therefore inhibition of RGL (Accession NP_055964.2), a gene which is involved in nucleotide exchange factor. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGL.

[59625] The function of RGL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Regulator of g-protein signalling 11 (RGS11, Accession NP_003825.1) is another GAM8297 target gene, herein designated TARGET GENE. RGS11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RGS11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS11 BINDING SITE, designated SEQ ID:2788, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59626] Another function of GAM8297 is therefore inhibition of Regulator of g-protein signalling 11 (RGS11, Accession NP_003825.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS11.

[59627] Ring finger protein 7 (RNF7, Accession NP_055060.1) is another GAM8297 target gene, herein designated TARGET GENE. RNF7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNF7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF7 BINDING SITE, designated SEQ ID:1071, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59628] Another function of GAM8297 is therefore inhibition of Ring finger protein 7 (RNF7, Accession NP_055060.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF7.

[59629] Roundabout, axon guidance receptor, homolog 1 (drosophila) (ROBO1, Accession NP_598334.1) is another GAM8297 target gene, herein designated TARGET GENE.

ROBO1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ROBO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ROBO1 BINDING SITE, designated SEQ ID:17266, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59630] Another function of GAM8297 is therefore inhibition of Roundabout, axon guidance receptor, homolog 1 (drosophila) (ROBO1, Accession NP_598334.1), a gene which is an axon guidance receptor. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ROBO1.

[59631] The function of ROBO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.2. Ryanodine receptor 1 (skeletal) (RYR1, Accession NP_000531.1) is another GAM8297 target gene, herein designated TARGET GENE. RYR1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RYR1, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RYR1 BINDING SITE, designated SEQ ID:5163, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59632] Another function of GAM8297 is therefore inhibition of Ryanodine receptor 1 (skeletal) (RYR1, Accession NP_000531.1), a gene which acts as a calcium release channel of sarcoplasmic reticulum and therefore may be associated with Malignant hyperthermia (mh) and of central core disease of muscle (ccd). mh. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Malignant hyperthermia (mh) and of central core disease of muscle (ccd). mh, and of other diseases and clinical conditions associated with RYR1.

[59633] The function of RYR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.2.SARM1 (Accession NP_055892.1) is another GAM8297 target gene, herein designated TARGET GENE. SARM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SARM1, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SARM1 BINDING SITE, designated SEQ ID:3114, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59634] Another function of GAM8297 is therefore inhibition of SARM1 (Accession NP_055892.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM1.

[59635] Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) is another GAM8297 target gene, herein designated TARGET GENE. SDC3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SDC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDC3 BINDING SITE, designated SEQ ID:2696, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59636] Another function of GAM8297 is therefore inhibition of Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) . Accordingly, utilities of GAM8297 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with SDC3.

[59637] SEF (Accession NP_060033.1) is another GAM8297 target gene, herein designated TARGET GENE. SEF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEF BINDING SITE, designated SEQ ID:2366, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59638] Another function of GAM8297 is therefore inhibition of SEF (Accession NP_060033.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEF.

[59639] Sema domain, immunoglobulin domain (ig), transmembrane domain (tm) and short cytoplasmic domain, (semaphorin) 4f (SEMA4F, Accession NP_004254.2) is another GAM8297 target gene, herein designated TARGET GENE. SEMA4F BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEMA4F, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA4F BINDING SITE, designated SEQ ID:17986, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59640] Another function of GAM8297 is therefore inhibition of Sema domain, immunoglobulin domain (ig), transmembrane domain (tm) and short cytoplasmic domain, (semaphorin) 4f (SEMA4F, Accession NP_004254.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA4F.

[59641] Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 6 (SERPINB6, Accession NP_004559.3) is another GAM8297 target gene, herein designated TARGET GENE. SERPINB6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SERPINB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB6 BINDING SITE, designated SEQ ID:16752, to the nucleotide se-

quence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59642] Another function of GAM8297 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 6 (SERPINB6, Accession NP_004559.3), a gene which inhibits thrombin. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB6.

[59643] The function of SERPINB6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM830.1.SH2B (Accession NP_056318.1) is another GAM8297 target gene, herein designated TARGET GENE. SH2B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH2B BINDING SITE, designated SEQ ID:4036, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59644] Another function of GAM8297 is therefore inhibition of

SH2B (Accession NP_056318.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH2B.

[59645] Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) is another GAM8297 target gene, herein designated TARGET GENE. SH3BP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH3BP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BP2 BINDING SITE, designated SEQ ID:14484, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59646] Another function of GAM8297 is therefore inhibition of Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BP2.

[59647] SHAPY (Accession NP_620148.1) is another GAM8297 target gene, herein designated TARGET GENE. SHAPY BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SHAPY, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHAPY BINDING SITE, designated SEQ ID:18309, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59648] Another function of GAM8297 is therefore inhibition of SHAPY (Accession NP_620148.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHAPY.

[59649] Solute carrier family 17 (sodium phosphate), member 2 (SLC17A2, Accession NP_005826.1) is another GAM8297 target gene, herein designated TARGET GENE. SLC17A2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC17A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC17A2 BINDING SITE, designated SEQ ID:2863, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59650] Another function of GAM8297 is therefore inhibition of Solute carrier family 17 (sodium phosphate), member 2

(SLC17A2, Accession NP_005826.1), a gene which is a putative type 1 sodium phosphate transporter and therefore may be associated with Autosomally mendelian hypophosphatemias. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Autosomally mendelian hypophosphatemias, and of other diseases and clinical conditions associated with SLC17A2.

[59651] The function of SLC17A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.1. Solute carrier family 26 (sulfate transporter), member 1 (SLC26A1, Accession NP_071325.2) is another GAM8297 target gene, herein designated TARGET GENE. SLC26A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SLC26A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC26A1 BINDING SITE, designated SEQ ID:8035, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59652] Another function of GAM8297 is therefore inhibition of

Solute carrier family 26 (sulfate transporter), member 1 (SLC26A1, Accession NP_071325.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC26A1.

[59653] Solute carrier family 6 (neurotransmitter transporter, gaba), member 1 (SLC6A1, Accession NP_003033.1) is another GAM8297 target gene, herein designated TARGET GENE. SLC6A1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SLC6A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A1 BINDING SITE, designated SEQ ID:2172, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59654] Another function of GAM8297 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, gaba), member 1 (SLC6A1, Accession NP_003033.1), a gene which terminates the action of gaba by its high affinity sodium- dependent reuptake into presynaptic terminals. Accordingly, utilities of GAM8297 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with SLC6A1.

[59655] The function of SLC6A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM969.2.SLC9A8 (Accession XP_030524.2) is another GAM8297 target gene, herein designated TARGET GENE. SLC9A8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC9A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC9A8 BINDING SITE, designated SEQ ID:1781, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59656] Another function of GAM8297 is therefore inhibition of SLC9A8 (Accession XP_030524.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC9A8.

[59657] Son dna binding protein (SON, Accession NP_115571.1) is another GAM8297 target gene, herein designated TARGET GENE. SON BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of

mRNA encoded by SON, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SON BINDING SITE, designated SEQ ID:2947, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59658] Another function of GAM8297 is therefore inhibition of Son dna binding protein (SON, Accession NP_115571.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SON.

[59659] Spir-1 (Accession XP_290818.1) is another GAM8297 target gene, herein designated TARGET GENE. Spir-1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by Spir-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Spir-1 BINDING SITE, designated SEQ ID:18344, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59660] Another function of GAM8297 is therefore inhibition of

Spir-1 (Accession XP_290818.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Spir-1.

[59661] Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) is another GAM8297 target gene, herein designated TARGET GENE. SPRY3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SPRY3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPRY3 BINDING SITE, designated SEQ ID:16967, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59662] Another function of GAM8297 is therefore inhibition of Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPRY3.

[59663] Serine/arginine repetitive matrix 1 (SRRM1, Accession NP_005830.1) is another GAM8297 target gene, herein designated TARGET GENE. SRRM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by SRRM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRRM1 BINDING SITE, designated SEQ ID:4656, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59664] Another function of GAM8297 is therefore inhibition of Serine/arginine repetitive matrix 1 (SRRM1, Accession NP_005830.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRRM1.

[59665] SSB1 (Accession NP_079382.2) is another GAM8297 target gene, herein designated TARGET GENE. SSB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SSB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSB1 BINDING SITE, designated SEQ ID:8921, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59666] Another function of GAM8297 is therefore inhibition of

SSB1 (Accession NP_079382.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSB1.

[59667] Synaptotagmin viii (SYT8, Accession NP_612634.1) is another GAM8297 target gene, herein designated TARGET GENE. SYT8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SYT8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT8 BINDING SITE, designated SEQ ID:6528, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59668] Another function of GAM8297 is therefore inhibition of Synaptotagmin viii (SYT8, Accession NP_612634.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT8.

[59669] Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_000107.1) is another GAM8297 target gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3' untranslated region of multi-

ple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:490, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59670] Another function of GAM8297 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_000107.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[59671] Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851829.1) is another GAM8297 target gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:490, to the nucleotide

sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59672] Another function of GAM8297 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851829.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[59673] Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851830.1) is another GAM8297 target gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:490, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59674] Another function of GAM8297 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession

NP_851830.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[59675] Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851828.1) is another GAM8297 target gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:490, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59676] Another function of GAM8297 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851828.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[59677] Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession

NP_851831.1) is another GAM8297 target gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:490, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59678] Another function of GAM8297 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; Barth syndrome) (TAZ, Accession NP_851831.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[59679] Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) is another GAM8297 target gene, herein designated TARGET GENE. TBC1D4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TBC1D4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of TBC1D4 BINDING SITE, designated SEQ ID:748, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59680] Another function of GAM8297 is therefore inhibition of Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D4.

[59681] T-box 6 (TBX6, Accession NP_004599.2) is another GAM8297 target gene, herein designated TARGET GENE. TBX6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TBX6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX6 BINDING SITE, designated SEQ ID:6888, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59682] Another function of GAM8297 is therefore inhibition of T-box 6 (TBX6, Accession NP_004599.2), a gene which is a probable transcriptional regulator involved in develop-

mental processes. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX6.

[59683] The function of TBX6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM59.1.T-box 6 (TBX6, Accession NP_542936.1) is another GAM8297 target gene, herein designated TARGET GENE. TBX6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TBX6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX6 BINDING SITE, designated SEQ ID:6888, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59684] Another function of GAM8297 is therefore inhibition of T-box 6 (TBX6, Accession NP_542936.1), a gene which is a probable transcriptional regulator involved in developmental processes. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX6.

[59685] The function of TBX6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM59.1.T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) is another GAM8297 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:18755, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59686] Another function of GAM8297 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[59687] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) is another GAM8297 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multi-

ple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:18755, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59688] Another function of GAM8297 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[59689] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) is another GAM8297 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:18755, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59690] Another function of GAM8297 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[59691] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) is another GAM8297 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:18755, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59692] Another function of GAM8297 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[59693] Tight junction protein 2 (zona occludens 2) (TJP2, Accession NP_004808.1) is another GAM8297 target gene,

herein designated TARGET GENE. TJP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TJP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TJP2 BINDING SITE, designated SEQ ID:15651, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59694] Another function of GAM8297 is therefore inhibition of Tight junction protein 2 (zona occludens 2) (TJP2, Accession NP_004808.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TJP2.

[59695] Transmembrane protein 2 (TMEM2, Accession NP_037522.1) is another GAM8297 target gene, herein designated TARGET GENE. TMEM2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TMEM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM2 BINDING SITE, designated SEQ ID:1387, to the nucleotide sequence of

GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59696] Another function of GAM8297 is therefore inhibition of Transmembrane protein 2 (TMEM2, Accession NP_037522.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM2.

[59697] Transmembrane protease, serine 2 (TMPRSS2, Accession NP_005647.2) is another GAM8297 target gene, herein designated TARGET GENE. TMPRSS2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TMPRSS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS2 BINDING SITE, designated SEQ ID:5188, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59698] Another function of GAM8297 is therefore inhibition of Transmembrane protease, serine 2 (TMPRSS2, Accession NP_005647.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS2.

[59699] Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1) is another GAM8297 target gene, herein designated TARGET GENE. TNFRSF1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNFRSF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF1B BINDING SITE, designated SEQ ID:11026, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59700] Another function of GAM8297 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1), a gene which mediates proinflammatory cellular responses. and therefore may be associated with Familial combined hyperlipidemia. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Familial combined hyperlipidemia., and of other diseases and clinical conditions associated with TNFRSF1B.

[59701] The function of TNFRSF1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1. Translocase of outer mitochondrial membrane 70 homolog a (yeast) (TOMM70A, Accession NP_055635.1) is another GAM8297 target gene, herein designated TARGET GENE. TOMM70A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TOMM70A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOMM70A BINDING SITE, designated SEQ ID:18168, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59702] Another function of GAM8297 is therefore inhibition of Translocase of outer mitochondrial membrane 70 homolog a (yeast) (TOMM70A, Accession NP_055635.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOMM70A.

[59703] Topoisomerase (dna) ii alpha 170kda (TOP2A, Accession NP_001058.2) is another GAM8297 target gene, herein designated TARGET GENE. TOP2A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TOP2A, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOP2A BINDING SITE, designated SEQ ID:15250, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59704] Another function of GAM8297 is therefore inhibition of Topoisomerase (dna) ii alpha 170kda (TOP2A, Accession NP_001058.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOP2A.

[59705] Tripartite motif-containing 26 (TRIM26, Accession NP_003440.1) is another GAM8297 target gene, herein designated TARGET GENE. TRIM26 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIM26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM26 BINDING SITE, designated SEQ ID:6153, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59706] Another function of GAM8297 is therefore inhibition of

Tripartite motif-containing 26 (TRIM26, Accession NP_003440.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM26.

[59707] TRIPIN (Accession NP_689737.1) is another GAM8297 target gene, herein designated TARGET GENE. TRIPIN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIPIN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIPIN BINDING SITE, designated SEQ ID:13987, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59708] Another function of GAM8297 is therefore inhibition of TRIPIN (Accession NP_689737.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIPIN.

[59709] Tubby homolog (mouse) (TUB, Accession NP_813977.1) is another GAM8297 target gene, herein designated TARGET GENE. TUB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TUB, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUB BINDING SITE, designated SEQ ID:4633, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59710] Another function of GAM8297 is therefore inhibition of Tubby homolog (mouse) (TUB, Accession NP_813977.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUB.

[59711] Tubby homolog (mouse) (TUB, Accession NP_003311.2) is another GAM8297 target gene, herein designated TARGET GENE. TUB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TUB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUB BINDING SITE, designated SEQ ID:4633, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59712] Another function of GAM8297 is therefore inhibition of

Tubby homolog (mouse) (TUB, Accession NP_003311.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUB.

[59713] Ubiquitin-conjugating enzyme e2 variant 1 (UBE2V1, Accession NP_071887.1) is another GAM8297 target gene, herein designated TARGET GENE. UBE2V1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by UBE2V1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2V1 BINDING SITE, designated SEQ ID:8584, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59714] Another function of GAM8297 is therefore inhibition of Ubiquitin-conjugating enzyme e2 variant 1 (UBE2V1, Accession NP_071887.1), a gene which may play a role in signaling for DNA repair. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2V1.

[59715] The function of UBE2V1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.1.Ubiquitin-conjugating enzyme e2 variant 1 (UBE2V1, Accession NP_003340.1) is another GAM8297 target gene, herein designated TARGET GENE. UBE2V1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by UBE2V1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2V1 BINDING SITE, designated SEQ ID:8584, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59716] Another function of GAM8297 is therefore inhibition of Ubiquitin-conjugating enzyme e2 variant 1 (UBE2V1, Accession NP_003340.1), a gene which may play a role in signaling for DNA repair. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2V1.

[59717] The function of UBE2V1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Ubiquitin-conjugating enzyme e2 variant 1

(UBE2V1, Accession NP_068823.1) is another GAM8297 target gene, herein designated TARGET GENE. UBE2V1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by UBE2V1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2V1 BINDING SITE, designated SEQ ID:8584, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59718] Another function of GAM8297 is therefore inhibition of Ubiquitin-conjugating enzyme e2 variant 1 (UBE2V1, Accession NP_068823.1), a gene which may play a role in signaling for DNA repair. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2V1.

[59719] The function of UBE2V1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.UEV3 (Accession NP_060784.2) is another GAM8297 target gene, herein designated TARGET GENE. UEV3 BINDING SITE is a target binding site found in the 3'

untranslated region of mRNA encoded by UEV3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UEV3 BINDING SITE, designated SEQ ID:10736, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59720] Another function of GAM8297 is therefore inhibition of UEV3 (Accession NP_060784.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UEV3.

[59721] Unc-5 homolog b (c. elegans) (UNC5C, Accession NP_003719.2) is another GAM8297 target gene, herein designated TARGET GENE. UNC5C BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UNC5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5C BINDING SITE, designated SEQ ID:8079, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59722] Another function of GAM8297 is therefore inhibition of

Unc-5 homolog b (c. elegans) (UNC5C, Accession NP_003719.2), a gene which is a putative receptor for netrin, which is involved in axon guidance. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5C.

[59723] The function of UNC5C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1. Uroporphyrinogen iii synthase (congenital erythropoietic porphyria) (UROS, Accession NP_000366.1) is another GAM8297 target gene, herein designated TARGET GENE. UROS BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by UROS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UROS BINDING SITE, designated SEQ ID:1029, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59724] Another function of GAM8297 is therefore inhibition of Uroporphyrinogen iii synthase (congenital erythropoietic porphyria) (UROS, Accession NP_000366.1), a gene which

is the fourth enzyme in heme biosynthesis pathway and therefore is associated with Congenital erythropoietic porphyria (cep). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Congenital erythropoietic porphyria (cep), and of other diseases and clinical conditions associated with UROS.

[59725] The function of UROS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1. Vimentin (VIM, Accession NP_003371.1) is another GAM8297 target gene, herein designated TARGET GENE. VIM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VIM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIM BINDING SITE, designated SEQ ID:14629, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59726] Another function of GAM8297 is therefore inhibition of Vimentin (VIM, Accession NP_003371.1), a gene which is the class-iii intermediate filaments found in various non-epithelial cells. Accordingly, utilities of GAM8297 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with VIM.

[59727] The function of VIM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3533.1.VIP32 (Accession NP_068378.1) is another GAM8297 target gene, herein designated TARGET GENE. VIP32 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by VIP32, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIP32 BINDING SITE, designated SEQ ID:14426, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59728] Another function of GAM8297 is therefore inhibition of VIP32 (Accession NP_068378.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIP32.

[59729] Wnt1 inducible signaling pathway protein 1 (WISP1, Accession NP_003873.1) is another GAM8297 target gene, herein designated TARGET GENE. WISP1 BINDING SITE is a target binding site found in the 3' untranslated region of

multiple transcripts of mRNA encoded by WISP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WISP1 BINDING SITE, designated SEQ ID:2051, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59730] Another function of GAM8297 is therefore inhibition of Wnt1 inducible signaling pathway protein 1 (WISP1, Accession NP_003873.1), a gene which is a member of connective tissue growth factor family. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WISP1.

[59731] The function of WISP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM629.1.Zinc finger protein 282 (ZNF282, Accession NP_003566.1) is another GAM8297 target gene, herein designated TARGET GENE. ZNF282 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZNF282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ZNF282 BINDING SITE, designated SEQ ID:11281, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59732] Another function of GAM8297 is therefore inhibition of Zinc finger protein 282 (ZNF282, Accession NP_003566.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF282.

[59733] Zinc finger protein 282 (ZNF282, Accession XP_114578.1) is another GAM8297 target gene, herein designated TARGET GENE. ZNF282 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZNF282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF282 BINDING SITE, designated SEQ ID:11281, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59734] Another function of GAM8297 is therefore inhibition of Zinc finger protein 282 (ZNF282, Accession XP_114578.1). Accordingly, utilities of GAM8297 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with ZNF282.

[59735] Zinc finger protein 337 (ZNF337, Accession NP_056470.1) is another GAM8297 target gene, herein designated TARGET GENE. ZNF337 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF337 BINDING SITE, designated SEQ ID:5587, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59736] Another function of GAM8297 is therefore inhibition of Zinc finger protein 337 (ZNF337, Accession NP_056470.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF337.

[59737] Zinc finger protein 76 (expressed in testis) (ZNF76, Accession NP_003418.2) is another GAM8297 target gene, herein designated TARGET GENE. ZNF76 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF76, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF76 BINDING SITE, designated SEQ ID:14384, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59738] Another function of GAM8297 is therefore inhibition of Zinc finger protein 76 (expressed in testis) (ZNF76, Accession NP_003418.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF76.

[59739] Zinc finger protein, subfamily 1a, 1 (ikaros) (ZNFN1A1, Accession NP_006051.1) is another GAM8297 target gene, herein designated TARGET GENE. ZNFN1A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNFN1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNFN1A1 BINDING SITE, designated SEQ ID:1221, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[59740] Another function of GAM8297 is therefore inhibition of

Zinc finger protein, subfamily 1a, 1 (ikaros) (ZNFN1A1, Accession NP_006051.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNFN1A1.

[59741]

[59742] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 8358 (GAM8358), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[59743] GAM8358 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM8358 was detected is described hereinabove with reference to Figs. 8-15.

[59744] GAM8358 gene, herein designated GAM GENE, and GAM8358 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[59745] GAM8358 gene encodes a GAM8358 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM8358 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide se-

quence of GAM8358 precursor RNA is designated SEQ ID:189, and is provided hereinbelow with reference to the sequence listing part.

[59746] GAM8358 precursor RNA folds onto itself, forming GAM8358 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[59747] GAM8358 precursor RNA folds onto itself, forming GAM8358 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[59748] Nucleotide sequence of GAM8358 precursor RNA, designated SEQ-ID: 189, and a schematic representation of a

predicted secondary folding of GAM8358 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[59749] An enzyme complex designated DICER COMPLEX, `dices` the GAM8358 folded precursor RNA into GAM8358 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM8358 RNA is designated SEQ ID:255, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[59750] GAM8358 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM8358 target RNA, herein designated GAM TARGET RNA. GAM8358 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[59751] GAM8358 RNA, herein designated GAM RNA, binds com-

plementarily to one or more target binding sites located in untranslated regions of GAM8358 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM8358 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM8358 RNA may have a different number of target binding sites in untranslated regions of a GAM8358 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only. These target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[59752] The complementary binding of GAM8358 RNA, herein designated GAM RNA, to target binding sites on GAM8358 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM8358 target RNA into GAM8358

target protein, herein designated GAM TARGET PROTEIN.
GAM target protein is therefore outlined by a broken line.

[59753] It is appreciated that GAM8358 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM8358 target genes. The mRNA of each one of this plurality of GAM8358 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM8358 RNA, herein designated GAM RNA, and which when bound by GAM8358 RNA causes inhibition of translation of respective one or more GAM8358 target proteins.

[59754] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM8358 gene, herein designated GAM GENE, on one or more GAM8358 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other

genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[59755] It is appreciated that specific functions and accordingly utilities of GAM8358 correlate with, and may be deduced from, the identity of the target genes which GAM8358 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[59756]

[59757]

[59758] (Accession NP_061052.1) is a GAM8358 target gene, herein designated TARGET GENE. BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BINDING SITE, designated SEQ ID:11587, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59759] A function of GAM8358 is therefore inhibition of

(Accession NP_061052.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with .

[59760] Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2) is another GAM8358 target gene, herein designated TARGET GENE. A1BG BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by A1BG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A1BG BINDING SITE, designated SEQ ID:18906, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59761] Another function of GAM8358 is therefore inhibition of Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2), a gene which a plasma protein of unknown function. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A1BG.

[59762] The function of A1BG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Atp-binding cassette, sub-family c

(cftr/mrp), member 3 (ABCC3, Accession NP_064422.1) is another GAM8358 target gene, herein designated TARGET GENE. ABCC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABCC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC3 BINDING SITE, designated SEQ ID:12771, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59763] Another function of GAM8358 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_064422.1), a gene which may act as an inducible transporter in the biliary and intestinal excretion of organic anions. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC3.

[59764] The function of ABCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2. Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_003777.2) is another

GAM8358 target gene, herein designated TARGET GENE. ABCC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABCC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC3 BINDING SITE, designated SEQ ID:12771, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59765] Another function of GAM8358 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_003777.2), a gene which may act as an inducible transporter in the biliary and intestinal excretion of organic anions. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC3.

[59766] The function of ABCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2. Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_064421.1) is another GAM8358 target gene, herein designated TARGET GENE.

ABCC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABCC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC3 BINDING SITE, designated SEQ ID:12771, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59767] Another function of GAM8358 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_064421.1), a gene which may act as an inducible transporter in the biliary and intestinal excretion of organic anions. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC3.

[59768] The function of ABCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.ACATE2 (Accession NP_036464.1) is another GAM8358 target gene, herein designated TARGET GENE. ACATE2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ACATE2,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACATE2 BINDING SITE, designated SEQ ID:11855, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59769] Another function of GAM8358 is therefore inhibition of ACATE2 (Accession NP_036464.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACATE2.

[59770] Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) is another GAM8358 target gene, herein designated TARGET GENE. ACTR1A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ACTR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACTR1A BINDING SITE, designated SEQ ID:19684, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59771] Another function of GAM8358 is therefore inhibition of

Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACTR1A.

[59772] Adenosine deaminase, rna-specific (ADAR, Accession NP_056656.1) is another GAM8358 target gene, herein designated TARGET GENE. ADAR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ADAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAR BINDING SITE, designated SEQ ID:12787, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59773] Another function of GAM8358 is therefore inhibition of Adenosine deaminase, rna-specific (ADAR, Accession NP_056656.1), a gene which converts adenosine to inosine in double-stranded RNA. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAR.

[59774] The function of ADAR and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1. Adenosine deaminase, rna-specific (ADAR, Accession NP_001102.1) is another GAM8358 target gene, herein designated TARGET GENE. ADAR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ADAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAR BINDING SITE, designated SEQ ID:12787, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59775] Another function of GAM8358 is therefore inhibition of Adenosine deaminase, rna-specific (ADAR, Accession NP_001102.1), a gene which converts adenosine to inosine in double-stranded RNA. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAR.

[59776] The function of ADAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1. Adenosine deaminase, rna-specific (ADAR,

Accession NP_056655.1) is another GAM8358 target gene, herein designated TARGET GENE. ADAR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ADAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAR BINDING SITE, designated SEQ ID:12787, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59777] Another function of GAM8358 is therefore inhibition of Adenosine deaminase, rna-specific (ADAR, Accession NP_056655.1), a gene which converts adenosine to inosine in double-stranded RNA. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAR.

[59778] The function of ADAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1. Adenylate kinase 2 (AK2, Accession NP_037543.1) is another GAM8358 target gene, herein designated TARGET GENE. AK2 BINDING SITE is a target binding site found in the 3' untranslated region of multi-

ple transcripts of mRNA encoded by AK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AK2 BINDING SITE, designated SEQ ID:1267, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59779] Another function of GAM8358 is therefore inhibition of Adenylate kinase 2 (AK2, Accession NP_037543.1), a gene which essential for maintenance and cell growth. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AK2.

[59780] The function of AK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM385.2.A kinase (prka) anchor protein 6 (AKAP6, Accession NP_004265.3) is another GAM8358 target gene, herein designated TARGET GENE. AKAP6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AKAP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of AKAP6 BINDING SITE, designated SEQ ID:19508, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59781] Another function of GAM8358 is therefore inhibition of A kinase (prka) anchor protein 6 (AKAP6, Accession NP_004265.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP6.

[59782] ALEX1 (Accession NP_057692.1) is another GAM8358 target gene, herein designated TARGET GENE. ALEX1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ALEX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALEX1 BINDING SITE, designated SEQ ID:14775, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59783] Another function of GAM8358 is therefore inhibition of ALEX1 (Accession NP_057692.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALEX1.

[59784] Angiotensin (AMOT, Accession NP_573572.1) is another GAM8358 target gene, herein designated TARGET GENE. AMOT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AMOT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMOT BINDING SITE, designated SEQ ID:13810, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59785] Another function of GAM8358 is therefore inhibition of Angiotensin (AMOT, Accession NP_573572.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMOT.

[59786] Annexin A13 (ANXA13, Accession NP_004297.1) is another GAM8358 target gene, herein designated TARGET GENE. ANXA13 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ANXA13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANXA13 BINDING SITE, designated

SEQ ID:17250, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59787] Another function of GAM8358 is therefore inhibition of Annexin a13 (ANXA13, Accession NP_004297.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANXA13.

[59788] Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) is another GAM8358 target gene, herein designated TARGET GENE. AP3S2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AP3S2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP3S2 BINDING SITE, designated SEQ ID:3119, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59789] Another function of GAM8358 is therefore inhibition of Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with AP3S2.

[59790] APM1 (Accession NP_004788.1) is another GAM8358 target gene, herein designated TARGET GENE. APM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APM1 BINDING SITE, designated SEQ ID:12520, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59791] Another function of GAM8358 is therefore inhibition of APM1 (Accession NP_004788.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APM1.

[59792] APPL (Accession NP_036228.1) is another GAM8358 target gene, herein designated TARGET GENE. APPL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPL BINDING SITE, designated SEQ ID:1547, to the nucleotide sequence

of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59793] Another function of GAM8358 is therefore inhibition of APPL (Accession NP_036228.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APPL.

[59794] Androgen receptor (dihydrotestosterone receptor; testicular feminization; spinal and bulbar muscular atrophy; kennedy disease) (AR, Accession NP_000035.2) is another GAM8358 target gene, herein designated TARGET GENE. AR BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by AR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AR BINDING SITE, designated SEQ ID:6654, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59795] Another function of GAM8358 is therefore inhibition of Androgen receptor (dihydrotestosterone receptor; testicular feminization; spinal and bulbar muscular atrophy; kennedy disease) (AR, Accession NP_000035.2), a gene which are involved in the regulation of eukaryotic gene

expression and affect cellular proliferation and differentiation in target tissues. and therefore is associated with Androgen insensitivity syndrome. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Androgen insensitivity syndrome, and of other diseases and clinical conditions associated with AR.

[59796] The function of AR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.BHD (Accession NP_653207.1) is another GAM8358 target gene, herein designated TARGET GENE. BHD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BHD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BHD BINDING SITE, designated SEQ ID:13544, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59797] Another function of GAM8358 is therefore inhibition of BHD (Accession NP_653207.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHD.

[59798] B lymphoma mo-mlv insertion region (mouse) (BMI1, Accession NP_005171.4) is another GAM8358 target gene, herein designated TARGET GENE. BMI1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BMI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMI1 BINDING SITE, designated SEQ ID:19346, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59799] Another function of GAM8358 is therefore inhibition of B lymphoma mo-mlv insertion region (mouse) (BMI1, Accession NP_005171.4). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMI1.

[59800] Brf1 homolog, subunit of rna polymerase iii transcription initiation factor iiib (s. cerevisiae) (BRF1, Accession NP_663718.1) is another GAM8358 target gene, herein designated TARGET GENE. BRF1 BINDING SITE1 and BRF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRF1, corresponding to target binding sites such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRF1 BINDING SITE1 and BRF1 BINDING SITE2, designated SEQ ID:674 and SEQ ID:13302 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59801] Another function of GAM8358 is therefore inhibition of Brf1 homolog, subunit of rna polymerase iii transcription initiation factor iiib (s. cerevisiae) (BRF1, Accession NP_663718.1), a gene which is a general activator of RNA polymerase III. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRF1.

[59802] The function of BRF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM140.1. Brf1 homolog, subunit of rna polymerase iii transcription initiation factor iiib (s. cerevisiae) (BRF1, Accession NP_663734.1) is another GAM8358 target gene, herein designated TARGET GENE. BRF1 BINDING SITE1 and BRF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRF1, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRF1 BINDING SITE1 and BRF1 BINDING SITE2, designated SEQ ID:13302 and SEQ ID:3850 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59803] Another function of GAM8358 is therefore inhibition of Brf1 homolog, subunit of rna polymerase iii transcription initiation factor iiib (*s. cerevisiae*) (BRF1, Accession NP_663734.1), a gene which is a general activator of RNA polymerase III. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRF1.

[59804] The function of BRF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM140.1.Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) is another GAM8358 target gene, herein designated TARGET GENE. BTBD5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BTBD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD5 BINDING SITE, designated SEQ ID:9813, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59805] Another function of GAM8358 is therefore inhibition of Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD5.

[59806] BTBD9 (Accession NP_689946.1) is another GAM8358 target gene, herein designated TARGET GENE. BTBD9 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by BTBD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD9 BINDING SITE, designated SEQ ID:9655, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59807] Another function of GAM8358 is therefore inhibition of BTBD9 (Accession NP_689946.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with BTBD9.

[59808] Butyrophilin, subfamily 1, member a1 (BTN1A1, Accession NP_001723.1) is another GAM8358 target gene, herein designated TARGET GENE. BTN1A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BTN1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN1A1 BINDING SITE, designated SEQ ID:19954, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59809] Another function of GAM8358 is therefore inhibition of Butyrophilin, subfamily 1, member a1 (BTN1A1, Accession NP_001723.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN1A1.

[59810] BZRAP1 (Accession NP_004749.1) is another GAM8358 target gene, herein designated TARGET GENE. BZRAP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BZRAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of BZRAP1 BINDING SITE, designated SEQ ID:2350, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59811] Another function of GAM8358 is therefore inhibition of BZRAP1 (Accession NP_004749.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BZRAP1.

[59812] c-MIR (Accession NP_659458.1) is another GAM8358 target gene, herein designated TARGET GENE. c-MIR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by c-MIR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of c-MIR BINDING SITE, designated SEQ ID:6685, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59813] Another function of GAM8358 is therefore inhibition of c-MIR (Accession NP_659458.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with c-MIR.

[59814] C10orf6 (Accession NP_060591.2) is another GAM8358

target gene, herein designated TARGET GENE. C10orf6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by C10orf6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C10orf6 BINDING SITE, designated SEQ ID:14001, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59815] Another function of GAM8358 is therefore inhibition of C10orf6 (Accession NP_060591.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C10orf6.

[59816] Chromosome 11 open reading frame 11 (C11orf11, Accession NP_006124.1) is another GAM8358 target gene, herein designated TARGET GENE. C11orf11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C11orf11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C11orf11

BINDING SITE, designated SEQ ID:11350, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59817] Another function of GAM8358 is therefore inhibition of Chromosome 11 open reading frame 11 (C11orf11, Accession NP_006124.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf11.

[59818] Chromosome 11 open reading frame 14 (C11orf14, Accession NP_065696.1) is another GAM8358 target gene, herein designated TARGET GENE. C11orf14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C11orf14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C11orf14 BINDING SITE, designated SEQ ID:19991, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59819] Another function of GAM8358 is therefore inhibition of Chromosome 11 open reading frame 14 (C11orf14, Accession NP_065696.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with C11orf14.

[59820] C14orf58 (Accession NP_060261.1) is another GAM8358 target gene, herein designated TARGET GENE. C14orf58 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf58, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf58 BINDING SITE, designated SEQ ID:9425, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59821] Another function of GAM8358 is therefore inhibition of C14orf58 (Accession NP_060261.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf58.

[59822] C14orf73 (Accession XP_040910.3) is another GAM8358 target gene, herein designated TARGET GENE. C14orf73 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf73, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

C14orf73 BINDING SITE, designated SEQ ID:2248, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59823] Another function of GAM8358 is therefore inhibition of C14orf73 (Accession XP_040910.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf73.

[59824] C14orf94 (Accession NP_060285.1) is another GAM8358 target gene, herein designated TARGET GENE. C14orf94 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf94, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf94 BINDING SITE, designated SEQ ID:10799, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59825] Another function of GAM8358 is therefore inhibition of C14orf94 (Accession NP_060285.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf94.

[59826] Chromosome 18 open reading frame 1 (C18orf1, Accession NP_004329.1) is another GAM8358 target gene, herein designated TARGET GENE. C18orf1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C18orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C18orf1 BINDING SITE, designated SEQ ID:18134, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59827] Another function of GAM8358 is therefore inhibition of Chromosome 18 open reading frame 1 (C18orf1, Accession NP_004329.1), a gene which displays selective expression, regulated spatially and temporally. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C18orf1.

[59828] The function of C18orf1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.1. Chromosome 18 open reading frame 2 (C18orf2, Accession NP_113604.1) is another GAM8358

target gene, herein designated TARGET GENE. C18orf2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C18orf2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C18orf2 BINDING SITE, designated SEQ ID:8513, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59829] Another function of GAM8358 is therefore inhibition of Chromosome 18 open reading frame 2 (C18orf2, Accession NP_113604.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C18orf2.

[59830] Chromosome 1 open reading frame 17 (C1orf17, Accession NP_055916.1) is another GAM8358 target gene, herein designated TARGET GENE. C1orf17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C1orf17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf17 BINDING SITE, designated SEQ ID:7471, to the nucleotide se-

quence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59831] Another function of GAM8358 is therefore inhibition of Chromosome 1 open reading frame 17 (C1orf17, Accession NP_055916.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf17.

[59832] Chromosome 20 open reading frame 14 (C20orf14, Accession NP_036601.1) is another GAM8358 target gene, herein designated TARGET GENE. C20orf14 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C20orf14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf14 BINDING SITE, designated SEQ ID:14369, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59833] Another function of GAM8358 is therefore inhibition of Chromosome 20 open reading frame 14 (C20orf14, Accession NP_036601.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf14.

[59834] Chromosome 20 open reading frame 150 (C20orf150, Accession XP_037265.1) is another GAM8358 target gene, herein designated TARGET GENE. C20orf150 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf150 BINDING SITE, designated SEQ ID:1203, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59835] Another function of GAM8358 is therefore inhibition of Chromosome 20 open reading frame 150 (C20orf150, Accession XP_037265.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf150.

[59836] Chromosome 20 open reading frame 166 (C20orf166, Accession NP_848558.1) is another GAM8358 target gene, herein designated TARGET GENE. C20orf166 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by C20orf166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf166 BINDING SITE, designated SEQ ID:15257, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59837] Another function of GAM8358 is therefore inhibition of Chromosome 20 open reading frame 166 (C20orf166, Accession NP_848558.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf166.

[59838] Chromosome 20 open reading frame 166 (C20orf166, Accession XP_170976.2) is another GAM8358 target gene, herein designated TARGET GENE. C20orf166 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by C20orf166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf166 BINDING SITE, designated SEQ ID:15257, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59839] Another function of GAM8358 is therefore inhibition of

Chromosome 20 open reading frame 166 (C20orf166, Accession XP_170976.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf166.

[59840] Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) is another GAM8358 target gene, herein designated TARGET GENE. C20orf177 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf177 BINDING SITE, designated SEQ ID:14749, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59841] Another function of GAM8358 is therefore inhibition of Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf177.

[59842] Chromosome 20 open reading frame 24 (C20orf24, Accession NP_061328.1) is another GAM8358 target gene, herein designated TARGET GENE. C20orf24 BINDING SITE

is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf24 BINDING SITE, designated SEQ ID:15423, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59843] Another function of GAM8358 is therefore inhibition of Chromosome 20 open reading frame 24 (C20orf24, Accession NP_061328.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf24.

[59844] Chromosome 21 open reading frame 90 (C21orf90, Accession NP_694936.1) is another GAM8358 target gene, herein designated TARGET GENE. C21orf90 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C21orf90, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf90 BINDING SITE, designated SEQ ID:2575, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[59845] Another function of GAM8358 is therefore inhibition of Chromosome 21 open reading frame 90 (C21orf90, Accession NP_694936.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf90.

[59846] Chromosome 22 open reading frame 5 (C22orf5, Accession NP_036396.1) is another GAM8358 target gene, herein designated TARGET GENE. C22orf5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C22orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf5 BINDING SITE, designated SEQ ID:8084, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59847] Another function of GAM8358 is therefore inhibition of Chromosome 22 open reading frame 5 (C22orf5, Accession NP_036396.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf5.

[59848] C6orf55 (Accession NP_057569.2) is another GAM8358

target gene, herein designated TARGET GENE. C6orf55 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf55, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf55 BINDING SITE, designated SEQ ID:6070, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59849] Another function of GAM8358 is therefore inhibition of C6orf55 (Accession NP_057569.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf55.

[59850] Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_115670.1) is another GAM8358 target gene, herein designated TARGET GENE. CAMKK1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CAMKK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK1 BINDING SITE, des-

ignated SEQ ID:8178, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

- [59851] Another function of GAM8358 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_115670.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK1.
- [59852] Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_757343.1) is another GAM8358 target gene, herein designated TARGET GENE. CAMKK1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK1 BINDING SITE, designated SEQ ID:8178, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.
- [59853] Another function of GAM8358 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 1,

alpha (CAMKK1, Accession NP_757343.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK1.

[59854] Chemokine binding protein 2 (CCBP2, Accession NP_001287.2) is another GAM8358 target gene, herein designated TARGET GENE. CCBP2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CCBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCBP2 BINDING SITE, designated SEQ ID:17116, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59855] Another function of GAM8358 is therefore inhibition of Chemokine binding protein 2 (CCBP2, Accession NP_001287.2), a gene which binds with relatively high-affinity to the majority of members of the beta-chemokine family. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCBP2.

[59856] The function of CCBP2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM377.2.Cyclin e1 (CCNE1, Accession NP_476530.1) is another GAM8358 target gene, herein designated TARGET GENE. CCNE1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCNE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNE1 BINDING SITE, designated SEQ ID:6758, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59857] Another function of GAM8358 is therefore inhibition of Cyclin e1 (CCNE1, Accession NP_476530.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNE1.

[59858] Cyclin e1 (CCNE1, Accession NP_001229.1) is another GAM8358 target gene, herein designated TARGET GENE. CCNE1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCNE1, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNE1 BINDING SITE, designated SEQ ID:6758, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59859] Another function of GAM8358 is therefore inhibition of Cyclin e1 (CCNE1, Accession NP_001229.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNE1.

[59860] Cyclin t2 (CCNT2, Accession NP_001232.1) is another GAM8358 target gene, herein designated TARGET GENE. CCNT2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNT2 BINDING SITE, designated SEQ ID:2221, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59861] Another function of GAM8358 is therefore inhibition of

Cyclin t2 (CCNT2, Accession NP_001232.1), a gene which is a regulatory subunit of the cyclin- dependent kinase pair (cdk9/cyclin t) complex. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNT2.

[59862] The function of CCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM179.1. Cyclin t2 (CCNT2, Accession NP_490595.1) is another GAM8358 target gene, herein designated TARGET GENE. CCNT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNT2 BINDING SITE, designated SEQ ID:2221, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59863] Another function of GAM8358 is therefore inhibition of Cyclin t2 (CCNT2, Accession NP_490595.1), a gene which is a regulatory subunit of the cyclin- dependent kinase pair (cdk9/cyclin t) complex. Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNT2.

[59864] The function of CCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM179.1. Chemokine (c-c motif) receptor 9 (CCR9, Accession NP_006632.2) is another GAM8358 target gene, herein designated TARGET GENE. CCR9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCR9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR9 BINDING SITE, designated SEQ ID:8222, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59865] Another function of GAM8358 is therefore inhibition of Chemokine (c-c motif) receptor 9 (CCR9, Accession NP_006632.2), a gene which binds beta-chemokine family and subsequently transduces a signal by increasing the intracellular calcium ions level. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR9.

[59866] The function of CCR9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM100.1. Chemokine (c-c motif) receptor 9 (CCR9, Accession NP_112477.1) is another GAM8358 target gene, herein designated TARGET GENE. CCR9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCR9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR9 BINDING SITE, designated SEQ ID:8222, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59867] Another function of GAM8358 is therefore inhibition of Chemokine (c-c motif) receptor 9 (CCR9, Accession NP_112477.1), a gene which binds beta-chemokine family and subsequently transduces a signal by increasing the intracellular calcium ions level. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR9.

[59868] The function of CCR9 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM100.1.CCRK (Accession NP_036251.2) is another GAM8358 target gene, herein designated TARGET GENE. CCRK BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCRK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCRK BINDING SITE, designated SEQ ID:14303, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59869] Another function of GAM8358 is therefore inhibition of CCRK (Accession NP_036251.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCRK.

[59870] CCRK (Accession NP_848519.1) is another GAM8358 target gene, herein designated TARGET GENE. CCRK BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCRK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of CCRK BINDING SITE, designated SEQ ID:14303, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59871] Another function of GAM8358 is therefore inhibition of CCRK (Accession NP_848519.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCRK.

[59872] Cd34 antigen (CD34, Accession NP_001764.1) is another GAM8358 target gene, herein designated TARGET GENE. CD34 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CD34, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD34 BINDING SITE, designated SEQ ID:18960, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59873] Another function of GAM8358 is therefore inhibition of Cd34 antigen (CD34, Accession NP_001764.1), a gene which is a monomeric cell surface antigen that is selectively expressed on human hematopoietic progenitor cells. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with CD34.

[59874] The function of CD34 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM38.1.Cdc42 effector protein (rho gtpase binding) 2 (CDC42EP2, Accession NP_006770.1) is another GAM8358 target gene, herein designated TARGET GENE. CDC42EP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CDC42EP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC42EP2 BINDING SITE, designated SEQ ID:19471, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59875] Another function of GAM8358 is therefore inhibition of Cdc42 effector protein (rho gtpase binding) 2 (CDC42EP2, Accession NP_006770.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC42EP2.

[59876] CDK11 (Accession XP_166324.1) is another GAM8358 target gene, herein designated TARGET GENE. CDK11 BIND-

ING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDK11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK11 BINDING SITE, designated SEQ ID:18586, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59877] Another function of GAM8358 is therefore inhibition of CDK11 (Accession XP_166324.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK11.

[59878] CGN (Accession NP_065821.1) is another GAM8358 target gene, herein designated TARGET GENE. CGN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CGN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGN BINDING SITE, designated SEQ ID:16231, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59879] Another function of GAM8358 is therefore inhibition of CGN (Accession NP_065821.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGN.

[59880] Chordin (CHRD, Accession NP_817088.1) is another GAM8358 target gene, herein designated TARGET GENE. CHRD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CHRD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRD BINDING SITE, designated SEQ ID:18550, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59881] Another function of GAM8358 is therefore inhibition of Chordin (CHRD, Accession NP_817088.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRD.

[59882] Chordin (CHRD, Accession NP_817087.1) is another GAM8358 target gene, herein designated TARGET GENE. CHRD BINDING SITE is a target binding site found in the

3' untranslated region of multiple transcripts of mRNA encoded by CHRD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRD BINDING SITE, designated SEQ ID:18550, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59883] Another function of GAM8358 is therefore inhibition of Chordin (CHRD, Accession NP_817087.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRD.

[59884] Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 7 (CHST7, Accession NP_063939.2) is another GAM8358 target gene, herein designated TARGET GENE. CHST7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CHST7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHST7 BINDING SITE, designated SEQ ID:12624, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[59885] Another function of GAM8358 is therefore inhibition of Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 7 (CHST7, Accession NP_063939.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST7.

[59886] Cockayne syndrome 1 (classical) (CKN1, Accession NP_000073.1) is another GAM8358 target gene, herein designated TARGET GENE. CKN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CKN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CKN1 BINDING SITE, designated SEQ ID:10649, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59887] Another function of GAM8358 is therefore inhibition of Cockayne syndrome 1 (classical) (CKN1, Accession NP_000073.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CKN1.

[59888] C-type (calcium dependent, carbohydrate-recognition do-

main) lectin, superfamily member 11 (CLECSF11, Accession NP_569708.1) is another GAM8358 target gene, herein designated TARGET GENE. CLECSF11 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CLECSF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF11 BINDING SITE, designated SEQ ID:16381, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59889] Another function of GAM8358 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 11 (CLECSF11, Accession NP_569708.1), a gene which may play a role in ligand internalization and presentation. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF11.

[59890] The function of CLECSF11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM571.1.CLONE25003 (Accession NP_056196.1) is another GAM8358 target gene, herein designated TARGET

GENE. CLONE25003 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLONE25003, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLONE25003 BINDING SITE, designated SEQ ID:3547, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59891] Another function of GAM8358 is therefore inhibition of CLONE25003 (Accession NP_056196.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLONE25003.

[59892] Contactin 2 (axonal) (CNTN2, Accession NP_005067.1) is another GAM8358 target gene, herein designated TARGET GENE. CNTN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNTN2 BINDING SITE, designated SEQ ID:19963, to the nucleotide sequence of GAM8358

RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59893] Another function of GAM8358 is therefore inhibition of Contactin 2 (axonal) (CNTN2, Accession NP_005067.1), a gene which may play a role in axonal growth and cell adhesion. and therefore may be associated with Malignant gliomas. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Malignant gliomas, and of other diseases and clinical conditions associated with CNTN2.

[59894] The function of CNTN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.2.COBRA1 (Accession NP_056271.2) is another GAM8358 target gene, herein designated TARGET GENE. COBRA1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COBRA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COBRA1 BINDING SITE, designated SEQ ID:9964, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ

ID:255.

[59895] Another function of GAM8358 is therefore inhibition of COBRA1 (Accession NP_056271.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COBRA1.

[59896] Collagen, type v, alpha 3 (COL5A3, Accession NP_056534.1) is another GAM8358 target gene, herein designated TARGET GENE. COL5A3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COL5A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL5A3 BINDING SITE, designated SEQ ID:12577, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59897] Another function of GAM8358 is therefore inhibition of Collagen, type v, alpha 3 (COL5A3, Accession NP_056534.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL5A3.

[59898] Cop9 constitutive photomorphogenic homolog subunit 7b

(arabidopsis) (COPS7B, Accession NP_073567.1) is another GAM8358 target gene, herein designated TARGET GENE. COPS7B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COPS7B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COPS7B BINDING SITE, designated SEQ ID:10817, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59899] Another function of GAM8358 is therefore inhibition of Cop9 constitutive photomorphogenic homolog subunit 7b (arabidopsis) (COPS7B, Accession NP_073567.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COPS7B.

[59900] Crm, cramped-like (drosophila) (CRAMP1L, Accession XP_034570.4) is another GAM8358 target gene, herein designated TARGET GENE. CRAMP1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRAMP1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CRAMP1L BINDING SITE, designated SEQ ID:8892, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59901] Another function of GAM8358 is therefore inhibition of Crm, cramped-like (drosophila) (CRAMP1L, Accession XP_034570.4) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRAMP1L.

[59902] Casein kinase 1, gamma 1 (CSNK1G1, Accession NP_071331.1) is another GAM8358 target gene, herein designated TARGET GENE. CSNK1G1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CSNK1G1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSNK1G1 BINDING SITE, designated SEQ ID:2519, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59903] Another function of GAM8358 is therefore inhibition of Casein kinase 1, gamma 1 (CSNK1G1, Accession NP_071331.1) . Accordingly, utilities of GAM8358 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK1G1.

[59904] CT120 (Accession NP_079068.1) is another GAM8358 target gene, herein designated TARGET GENE. CT120 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CT120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CT120 BINDING SITE, designated SEQ ID:4706, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59905] Another function of GAM8358 is therefore inhibition of CT120 (Accession NP_079068.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CT120.

[59906] Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1) is another GAM8358 target gene, herein designated TARGET GENE. CYP2B6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYP2B6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP2B6 BINDING SITE, designated SEQ ID:11117, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59907] Another function of GAM8358 is therefore inhibition of Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1), a gene which oxidizes a variety of structurally unrelated compounds, including steroids, fatty acids, and xenobiotics. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP2B6.

[59908] The function of CYP2B6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.D12S2489E (Accession NP_031386.1) is another GAM8358 target gene, herein designated TARGET GENE. D12S2489E BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by D12S2489E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of D12S2489E BINDING SITE, designated SEQ ID:712, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59909] Another function of GAM8358 is therefore inhibition of D12S2489E (Accession NP_031386.1), a gene which interacts in the inhibition and activation of NK cells. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with D12S2489E.

[59910] The function of D12S2489E and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM715.2.Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, *s. cerevisiae*) (DDX11, Accession NP_085913.1) is another GAM8358 target gene, herein designated TARGET GENE. DDX11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DDX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX11 BINDING SITE, designated

SEQ ID:7256, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59911] Another function of GAM8358 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, *s. cerevisiae*) (DDX11, Accession NP_085913.1), a gene which could be an ATP- dependent DNA- binding helicase and may intervene in cell cycle regulation. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX11.

[59912] The function of DDX11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Dead/h (asp-glu-ala-asp/his) box polypeptide 20, 103kda (DDX20, Accession NP_009135.3) is another GAM8358 target gene, herein designated TARGET GENE. DDX20 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DDX20, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX20 BINDING SITE, designated

SEQ ID:2897, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59913] Another function of GAM8358 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 20, 103kda (DDX20, Accession NP_009135.3), a gene which interacts with SMN and is required for pre- mRNA splicing in the nucleus. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX20.

[59914] The function of DDX20 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.1.DKFZp434F142 (Accession NP_115630.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp434F142 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp434F142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434F142 BINDING SITE, designated SEQ ID:6913, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[59915] Another function of GAM8358 is therefore inhibition of DKFZp434F142 (Accession NP_115630.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434F142.

[59916] DKFZp434I1930 (Accession NP_115631.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp434I1930 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp434I1930, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434I1930 BINDING SITE, designated SEQ ID:16331, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59917] Another function of GAM8358 is therefore inhibition of DKFZp434I1930 (Accession NP_115631.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434I1930.

[59918] DKFZp434O0320 (Accession XP_097012.2) is another

GAM8358 target gene, herein designated TARGET GENE. DKFZp434O0320 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp434O0320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434O0320 BINDING SITE, designated SEQ ID:9070, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59919] Another function of GAM8358 is therefore inhibition of DKFZp434O0320 (Accession XP_097012.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434O0320.

[59920] DKFZp547C176 (Accession XP_040799.2) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp547C176 BINDING SITE1 and DKFZp547C176 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp547C176, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

DKFZp547C176 BINDING SITE1 and DKFZp547C176 BINDING SITE2, designated SEQ ID:9992 and SEQ ID:13108 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59921] Another function of GAM8358 is therefore inhibition of DKFZp547C176 (Accession XP_040799.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547C176.

[59922] DKFZP564K0322 (Accession NP_114429.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZP564K0322 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP564K0322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564K0322 BINDING SITE, designated SEQ ID:5804, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59923] Another function of GAM8358 is therefore inhibition of DKFZP564K0322 (Accession NP_114429.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP564K0322.

[59924] DKFZP564O043 (Accession NP_064715.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZP564O043 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP564O043, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O043 BINDING SITE, designated SEQ ID:15465, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59925] Another function of GAM8358 is therefore inhibition of DKFZP564O043 (Accession NP_064715.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O043.

[59926] DKFZP566C0424 (Accession NP_056424.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZP566C0424 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP566C0424, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566C0424 BINDING SITE, designated SEQ ID:8396, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59927] Another function of GAM8358 is therefore inhibition of DKFZP566C0424 (Accession NP_056424.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566C0424.

[59928] DKFZP727G051 (Accession XP_045308.2) is another GAM8358 target gene, herein designated TARGET GENE. DKFZP727G051 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP727G051, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP727G051 BINDING SITE, designated SEQ ID:6607, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59929] Another function of GAM8358 is therefore inhibition of

DKFZP727G051 (Accession XP_045308.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP727G051.

[59930] DKFZp761B0514 (Accession NP_115665.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp761B0514 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761B0514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B0514 BINDING SITE, designated SEQ ID:3724, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59931] Another function of GAM8358 is therefore inhibition of DKFZp761B0514 (Accession NP_115665.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B0514.

[59932] DKFZp761E1217 (Accession NP_848634.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp761E1217 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by DKFZp761E1217, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761E1217 BINDING SITE, designated SEQ ID:1697, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59933] Another function of GAM8358 is therefore inhibition of DKFZp761E1217 (Accession NP_848634.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761E1217.

[59934] DKFZp761H2121 (Accession NP_612212.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp761H2121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H2121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H2121 BINDING SITE, designated SEQ ID:7508, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[59935] Another function of GAM8358 is therefore inhibition of DKFZp761H2121 (Accession NP_612212.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H2121.

[59936] DKFZp761K1423 (Accession NP_060892.1) is another GAM8358 target gene, herein designated TARGET GENE. DKFZp761K1423 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761K1423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761K1423 BINDING SITE, designated SEQ ID:1386, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59937] Another function of GAM8358 is therefore inhibition of DKFZp761K1423 (Accession NP_060892.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761K1423.

[59938] Dystrophin myotonia-protein kinase (DMPK, Accession

NP_004400.3) is another GAM8358 target gene, herein designated TARGET GENE. DMPK BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DMPK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMPK BINDING SITE, designated SEQ ID:2249, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59939] Another function of GAM8358 is therefore inhibition of Dystrophin myotonia-protein kinase (DMPK, Accession NP_004400.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMPK.

[59940] Doublesex and mab-3 related transcription factor 2 (DMRT2, Accession NP_006548.1) is another GAM8358 target gene, herein designated TARGET GENE. DMRT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DMRT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

DMRT2 BINDING SITE, designated SEQ ID:2892, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59941] Another function of GAM8358 is therefore inhibition of Doublesex and mab-3 related transcription factor 2 (DMRT2, Accession NP_006548.1), a gene which May be involved in male sexual development. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMRT2.

[59942] The function of DMRT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM439.1.Dnaj (hsp40) homolog, subfamily b, member 2 (DNAJB2, Accession NP_006727.2) is another GAM8358 target gene, herein designated TARGET GENE. DNAJB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DNAJB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAJB2 BINDING SITE, designated SEQ ID:960, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59943] Another function of GAM8358 is therefore inhibition of Dnaj (hsp40) homolog, subfamily b, member 2 (DNAJB2, Accession NP_006727.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJB2.

[59944] Dnaj (hsp40) homolog, subfamily c, member 8 (DNAJC8, Accession NP_055095.1) is another GAM8358 target gene, herein designated TARGET GENE. DNAJC8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DNAJC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAJC8 BINDING SITE, designated SEQ ID:9424, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59945] Another function of GAM8358 is therefore inhibition of Dnaj (hsp40) homolog, subfamily c, member 8 (DNAJC8, Accession NP_055095.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJC8.

[59946] Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788274.1) is another GAM8358 target gene,

herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59947] Another function of GAM8358 is therefore inhibition of Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788274.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59948] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_004403.1) is another GAM8358 target gene, herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded

by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59949] Another function of GAM8358 is therefore inhibition of Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_004403.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59950] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788270.1) is another GAM8358 target gene, herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59951] Another function of GAM8358 is therefore inhibition of Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788270.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59952] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788271.1) is another GAM8358 target gene, herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated

SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59953] Another function of GAM8358 is therefore inhibition of Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788271.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59954] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788272.1) is another GAM8358 target gene, herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ

ID:255.

[59955] Another function of GAM8358 is therefore inhibition of Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788272.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59956] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788273.1) is another GAM8358 target gene, herein designated TARGET GENE. DNMT2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DNMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNMT2 BINDING SITE, designated SEQ ID:5113, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59957] Another function of GAM8358 is therefore inhibition of

Dna (cytosine-5-)-methyltransferase 2 (DNMT2, Accession NP_788273.1), a gene which may mark specific sequences in the genome . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNMT2.

[59958] The function of DNMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM264.1.DPF3 (Accession NP_036206.1) is another GAM8358 target gene, herein designated TARGET GENE. DPF3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DPF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPF3 BINDING SITE, designated SEQ ID:15008, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59959] Another function of GAM8358 is therefore inhibition of DPF3 (Accession NP_036206.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPF3.

[59960] Diphtheria toxin resistance protein required for diph-

thamide biosynthesis-like 2 (*s. cerevisiae*) (DPH2L2, Accession NP_001375.2) is another GAM8358 target gene, herein designated TARGET GENE. DPH2L2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DPH2L2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPH2L2 BINDING SITE, designated SEQ ID:14115, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59961] Another function of GAM8358 is therefore inhibition of Diphtheria toxin resistance protein required for diphthamide biosynthesis-like 2 (*s. cerevisiae*) (DPH2L2, Accession NP_001375.2), a gene which is required for diphthamide biosynthesis. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPH2L2.

[59962] The function of DPH2L2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM673.1. Dopamine receptor d5 (DRD5, Accession NP_000789.1) is another GAM8358 target gene, herein

designated TARGET GENE. DRD5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DRD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRD5 BINDING SITE, designated SEQ ID:14601, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59963] Another function of GAM8358 is therefore inhibition of Dopamine receptor d5 (DRD5, Accession NP_000789.1), a gene which is a dopamine receptor. and therefore may be associated with Primary cervical dystonia and schizophrenia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Primary cervical dystonia and schizophrenia, and of other diseases and clinical conditions associated with DRD5.

[59964] The function of DRD5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1571.1. Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) is another GAM8358 target gene, herein designated TARGET GENE. DSCR6

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DSCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSCR6 BINDING SITE, designated SEQ ID:3793, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59965] Another function of GAM8358 is therefore inhibition of Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR6.

[59966] DT1P1A10 (Accession NP_477511.1) is another GAM8358 target gene, herein designated TARGET GENE. DT1P1A10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DT1P1A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DT1P1A10 BINDING SITE, designated SEQ ID:15919, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59967] Another function of GAM8358 is therefore inhibition of DT1P1A10 (Accession NP_477511.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DT1P1A10.

[59968] Dishevelled, dsh homolog 3 (drosophila) (DVL3, Accession NP_004414.2) is another GAM8358 target gene, herein designated TARGET GENE. DVL3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DVL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DVL3 BINDING SITE, designated SEQ ID:10388, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59969] Another function of GAM8358 is therefore inhibition of Dishevelled, dsh homolog 3 (drosophila) (DVL3, Accession NP_004414.2), a gene which regulates cell proliferation. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DVL3.

[59970] The function of DVL3 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.E2IG4 (Accession NP_056331.1) is another GAM8358 target gene, herein designated TARGET GENE. E2IG4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by E2IG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of E2IG4 BINDING SITE, designated SEQ ID:5803, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59971] Another function of GAM8358 is therefore inhibition of E2IG4 (Accession NP_056331.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with E2IG4.

[59972] EB-1 (Accession NP_690001.1) is another GAM8358 target gene, herein designated TARGET GENE. EB-1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by EB-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of EB-1 BINDING SITE, designated SEQ ID:571, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59973] Another function of GAM8358 is therefore inhibition of EB-1 (Accession NP_690001.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EB-1.

[59974] EDEM (Accession NP_055489.1) is another GAM8358 target gene, herein designated TARGET GENE. EDEM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EDEM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDEM BINDING SITE, designated SEQ ID:3301, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59975] Another function of GAM8358 is therefore inhibition of EDEM (Accession NP_055489.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDEM.

[59976] Eukaryotic translation initiation factor 2b, subunit 5 epsilon, 82kda (EIF2B5, Accession XP_291076.1) is another

GAM8358 target gene, herein designated TARGET GENE. EIF2B5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EIF2B5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2B5 BINDING SITE, designated SEQ ID:6190, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59977] Another function of GAM8358 is therefore inhibition of Eukaryotic translation initiation factor 2b, subunit 5 epsilon, 82kda (EIF2B5, Accession XP_291076.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2B5.

[59978] Ectonucleoside triphosphate diphosphohydrolase 6 (putative function) (ENTPD6, Accession NP_001238.1) is another GAM8358 target gene, herein designated TARGET GENE. ENTPD6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ENTPD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of ENTPD6 BINDING SITE, designated SEQ ID:10345, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59979] Another function of GAM8358 is therefore inhibition of Ectonucleoside triphosphate diphosphohydrolase 6 (putative function) (ENTPD6, Accession NP_001238.1), a gene which might support glycosylation reactions in the golgi apparatus and, when released from cells, might catalyze the hydrolysis of extracellular nucleotides. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENTPD6.

[59980] The function of ENTPD6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Ephb4 (EPHB4, Accession NP_004435.2) is another GAM8358 target gene, herein designated TARGET GENE. EPHB4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EPHB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of EPHB4 BINDING SITE, designated SEQ ID:1248, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59981] Another function of GAM8358 is therefore inhibition of Ephb4 (EPHB4, Accession NP_004435.2), a gene which receptor for members of the ephrin- b family. binds to ephrin- b2. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPHB4.

[59982] The function of EPHB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM767.1.ERAP140 (Accession XP_059748.2) is another GAM8358 target gene, herein designated TARGET GENE. ERAP140 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ERAP140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERAP140 BINDING SITE, designated SEQ ID:5927, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59983] Another function of GAM8358 is therefore inhibition of ERAP140 (Accession XP_059748.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERAP140.

[59984] Envoplakin (EVPL, Accession NP_001979.1) is another GAM8358 target gene, herein designated TARGET GENE. EVPL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EVPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVPL BINDING SITE, designated SEQ ID:6608, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59985] Another function of GAM8358 is therefore inhibition of Envoplakin (EVPL, Accession NP_001979.1), a gene which a membrane-associated protein . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVPL.

[59986] The function of EVPL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM869.1.FBXW5 (Accession NP_839891.1) is another GAM8358 target gene, herein designated TARGET GENE. FBXW5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FBXW5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW5 BINDING SITE, designated SEQ ID:13135, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59987] Another function of GAM8358 is therefore inhibition of FBXW5 (Accession NP_839891.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW5.

[59988] FLJ00001 (Accession XP_088525.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ00001 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ00001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00001 BINDING SITE, designated SEQ ID:19793, to the

nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59989] Another function of GAM8358 is therefore inhibition of FLJ00001 (Accession XP_088525.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00001.

[59990] FLJ10346 (Accession NP_060535.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ10346 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ10346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10346 BINDING SITE, designated SEQ ID:14374, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59991] Another function of GAM8358 is therefore inhibition of FLJ10346 (Accession NP_060535.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10346.

[59992] FLJ10539 (Accession NP_060600.1) is another GAM8358

target gene, herein designated TARGET GENE. FLJ10539 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10539, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10539 BINDING SITE, designated SEQ ID:11608, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59993] Another function of GAM8358 is therefore inhibition of FLJ10539 (Accession NP_060600.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10539.

[59994] FLJ10980 (Accession XP_035527.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ10980 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10980, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10980 BINDING SITE, designated SEQ ID:6098, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[59995] Another function of GAM8358 is therefore inhibition of FLJ10980 (Accession XP_035527.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10980.

[59996] FLJ11783 (Accession NP_079167.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ11783 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ11783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11783 BINDING SITE, designated SEQ ID:6450, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59997] Another function of GAM8358 is therefore inhibition of FLJ11783 (Accession NP_079167.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11783.

[59998] FLJ12076 (Accession NP_079463.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12076

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12076, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12076 BINDING SITE, designated SEQ ID:1230, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[59999] Another function of GAM8358 is therefore inhibition of FLJ12076 (Accession NP_079463.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12076.

[60000] FLJ12547 (Accession NP_079268.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12547 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12547 BINDING SITE, designated SEQ ID:19280, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60001] Another function of GAM8358 is therefore inhibition of FLJ12547 (Accession NP_079268.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12547.

[60002] FLJ12687 (Accession NP_079193.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12687 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ12687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12687 BINDING SITE, designated SEQ ID:3627, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60003] Another function of GAM8358 is therefore inhibition of FLJ12687 (Accession NP_079193.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12687.

[60004] FLJ12800 (Accession NP_075054.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12800 BINDING SITE1 through FLJ12800 BINDING SITE3 are target

binding sites found in untranslated regions of mRNA encoded by FLJ12800, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12800 BINDING SITE1 through FLJ12800 BINDING SITE3, designated SEQ ID:14600, SEQ ID:10088 and SEQ ID:7968 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60005] Another function of GAM8358 is therefore inhibition of FLJ12800 (Accession NP_075054.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12800.

[60006] FLJ12875 (Accession NP_078820.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12875 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12875, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12875 BINDING SITE, designated SEQ ID:12746, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[60007] Another function of GAM8358 is therefore inhibition of FLJ12875 (Accession NP_078820.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12875.

[60008] FLJ12985 (Accession NP_079200.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ12985 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12985 BINDING SITE, designated SEQ ID:4980, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60009] Another function of GAM8358 is therefore inhibition of FLJ12985 (Accession NP_079200.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12985.

[60010] FLJ13072 (Accession XP_117117.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ13072

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13072 BINDING SITE, designated SEQ ID:14989, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60011] Another function of GAM8358 is therefore inhibition of FLJ13072 (Accession XP_117117.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13072.

[60012] FLJ13197 (Accession NP_078890.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ13197 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13197 BINDING SITE, designated SEQ ID:7714, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60013] Another function of GAM8358 is therefore inhibition of FLJ13197 (Accession NP_078890.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13197.

[60014] FLJ13639 (Accession NP_078981.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ13639 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13639 BINDING SITE, designated SEQ ID:9712, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60015] Another function of GAM8358 is therefore inhibition of FLJ13639 (Accession NP_078981.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13639.

[60016] FLJ13848 (Accession NP_079047.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ13848 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ13848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13848 BINDING SITE, designated SEQ ID:8727, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60017] Another function of GAM8358 is therefore inhibition of FLJ13848 (Accession NP_079047.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13848.

[60018] FLJ13852 (Accession NP_075566.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ13852 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13852, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13852 BINDING SITE, designated SEQ ID:1028, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60019] Another function of GAM8358 is therefore inhibition of

FLJ13852 (Accession NP_075566.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13852.

[60020] FLJ14399 (Accession NP_116169.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ14399 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14399, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14399 BINDING SITE, designated SEQ ID:15886, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60021] Another function of GAM8358 is therefore inhibition of FLJ14399 (Accession NP_116169.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14399.

[60022] FLJ14816 (Accession NP_116234.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ14816 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14816, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14816 BINDING SITE, designated SEQ ID:3978, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60023] Another function of GAM8358 is therefore inhibition of FLJ14816 (Accession NP_116234.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14816.

[60024] FLJ20232 (Accession NP_061881.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20232 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20232 BINDING SITE, designated SEQ ID:17239, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60025] Another function of GAM8358 is therefore inhibition of FLJ20232 (Accession NP_061881.2) . Accordingly, utilities

of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20232.

[60026] FLJ20300 (Accession NP_060223.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20300 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20300 BINDING SITE, designated SEQ ID:10271, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60027] Another function of GAM8358 is therefore inhibition of FLJ20300 (Accession NP_060223.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20300.

[60028] FLJ20303 (Accession NP_060225.2) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20303 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ20303, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20303 BINDING SITE, designated SEQ ID:952, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60029] Another function of GAM8358 is therefore inhibition of FLJ20303 (Accession NP_060225.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20303.

[60030] FLJ20508 (Accession NP_060320.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20508 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20508, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20508 BINDING SITE, designated SEQ ID:2977, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60031] Another function of GAM8358 is therefore inhibition of FLJ20508 (Accession NP_060320.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20508.

[60032] FLJ20511 (Accession NP_060323.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20511 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20511, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20511 BINDING SITE, designated SEQ ID:11948, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60033] Another function of GAM8358 is therefore inhibition of FLJ20511 (Accession NP_060323.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20511.

[60034] FLJ20802 (Accession NP_060429.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ20802 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ20802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20802 BINDING SITE, designated SEQ ID:19763, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60035] Another function of GAM8358 is therefore inhibition of FLJ20802 (Accession NP_060429.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20802.

[60036] FLJ21438 (Accession XP_029084.5) is another GAM8358 target gene, herein designated TARGET GENE. FLJ21438 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21438, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21438 BINDING SITE, designated SEQ ID:7158, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60037] Another function of GAM8358 is therefore inhibition of FLJ21438 (Accession XP_029084.5) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21438.

[60038] FLJ23231 (Accession NP_079355.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ23231 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23231 BINDING SITE, designated SEQ ID:3342, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60039] Another function of GAM8358 is therefore inhibition of FLJ23231 (Accession NP_079355.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23231.

[60040] FLJ23322 (Accession NP_079231.3) is another GAM8358 target gene, herein designated TARGET GENE. FLJ23322 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ23322 BINDING SITE, designated SEQ ID:14095, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60041] Another function of GAM8358 is therefore inhibition of FLJ23322 (Accession NP_079231.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23322.

[60042] FLJ25371 (Accession NP_689756.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ25371 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ25371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25371 BINDING SITE, designated SEQ ID:18933, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60043] Another function of GAM8358 is therefore inhibition of FLJ25371 (Accession NP_689756.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25371.

[60044] FLJ30313 (Accession NP_689970.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ30313 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30313 BINDING SITE, designated SEQ ID:5561, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60045] Another function of GAM8358 is therefore inhibition of FLJ30313 (Accession NP_689970.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30313.

[60046] FLJ30634 (Accession NP_694559.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ30634 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30634, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30634 BINDING SITE, designated SEQ ID:3937, to the

nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60047] Another function of GAM8358 is therefore inhibition of FLJ30634 (Accession NP_694559.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30634.

[60048] FLJ31715 (Accession NP_689745.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ31715 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31715 BINDING SITE, designated SEQ ID:15771, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60049] Another function of GAM8358 is therefore inhibition of FLJ31715 (Accession NP_689745.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31715.

[60050] FLJ31958 (Accession NP_694575.1) is another GAM8358

target gene, herein designated TARGET GENE. FLJ31958 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31958 BINDING SITE, designated SEQ ID:17080, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60051] Another function of GAM8358 is therefore inhibition of FLJ31958 (Accession NP_694575.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31958.

[60052] FLJ32334 (Accession NP_653166.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ32334 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32334 BINDING SITE, designated SEQ ID:18443, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[60053] Another function of GAM8358 is therefore inhibition of FLJ32334 (Accession NP_653166.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32334.

[60054] FLJ32796 (Accession NP_705834.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ32796 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ32796, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32796 BINDING SITE, designated SEQ ID:6527, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60055] Another function of GAM8358 is therefore inhibition of FLJ32796 (Accession NP_705834.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32796.

[60056] FLJ36666 (Accession NP_689695.1) is another GAM8358 target gene, herein designated TARGET GENE. FLJ36666

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ36666, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36666 BINDING SITE, designated SEQ ID:19178, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60057] Another function of GAM8358 is therefore inhibition of FLJ36666 (Accession NP_689695.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36666.

[60058] Fibromodulin (FMOD, Accession NP_002014.1) is another GAM8358 target gene, herein designated TARGET GENE. FMOD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FMOD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FMOD BINDING SITE, designated SEQ ID:1281, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60059] Another function of GAM8358 is therefore inhibition of Fibromodulin (FMOD, Accession NP_002014.1), a gene which affects the rate of fibrils formation. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FMOD.

[60060] The function of FMOD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM369.1. Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2) is another GAM8358 target gene, herein designated TARGET GENE. FOXO1A BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FOXO1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXO1A BINDING SITE, designated SEQ ID:4341, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60061] Another function of GAM8358 is therefore inhibition of Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2), a gene which is a probable transcrip-

tion factor. and therefore may be associated with Alveolar rhabdomyosarcoma- 2. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Alveolar rhabdomyosarcoma- 2., and of other diseases and clinical conditions associated with FOXO1A.

[60062] The function of FOXO1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1) is another GAM8358 target gene, herein designated TARGET GENE. FUT6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT6 BINDING SITE, designated SEQ ID:5232, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60063] Another function of GAM8358 is therefore inhibition of Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1), a gene which is involved in the biosynthesis of the e- selectin ligand, sialyl- lewis

x. catalyzes the transfer of fucose from gdp- beta- fucose to alpha- 2,3 sialylated substrates. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT6.

[60064] The function of FUT6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_068703.1) is another GAM8358 target gene, herein designated TARGET GENE. GABBR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GABBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABBR1 BINDING SITE, designated SEQ ID:7815, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60065] Another function of GAM8358 is therefore inhibition of Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_068703.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with GABBR1.

[60066] Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_001461.1) is another GAM8358 target gene, herein designated TARGET GENE. GABBR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GABBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABBR1 BINDING SITE, designated SEQ ID:7815, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60067] Another function of GAM8358 is therefore inhibition of Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_001461.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GABBR1.

[60068] Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_068704.1) is another GAM8358 target gene, herein designated TARGET GENE. GABBR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GABBR1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABBR1 BINDING SITE, designated SEQ ID:7815, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60069] Another function of GAM8358 is therefore inhibition of Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_068704.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GABBR1.

[60070] Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1, Accession NP_068705.1) is another GAM8358 target gene, herein designated TARGET GENE. GABBR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GABBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABBR1 BINDING SITE, designated SEQ ID:7815, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60071] Another function of GAM8358 is therefore inhibition of Gamma-aminobutyric acid (gaba) b receptor, 1 (GABBR1,

Accession NP_068705.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GABBR1.

[60072] GAC1 (Accession NP_006329.1) is another GAM8358 target gene, herein designated TARGET GENE. GAC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAC1 BINDING SITE, designated SEQ ID:18086, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60073] Another function of GAM8358 is therefore inhibition of GAC1 (Accession NP_006329.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAC1.

[60074] GAL3ST2 (Accession NP_149025.1) is another GAM8358 target gene, herein designated TARGET GENE. GAL3ST2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GAL3ST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of GAL3ST2 BINDING SITE, designated SEQ ID:19391, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60075] Another function of GAM8358 is therefore inhibition of GAL3ST2 (Accession NP_149025.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAL3ST2.

[60076] GALNAC4S-6ST (Accession NP_055678.1) is another GAM8358 target gene, herein designated TARGET GENE. GALNAC4S-6ST BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GALNAC4S-6ST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNAC4S-6ST BINDING SITE, designated SEQ ID:14898, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60077] Another function of GAM8358 is therefore inhibition of GALNAC4S-6ST (Accession NP_055678.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with GALNAC4S-6ST.

[60078] GALNAC4S-6ST (Accession NP_056976.1) is another GAM8358 target gene, herein designated TARGET GENE. GALNAC4S-6ST BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GALNAC4S-6ST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNAC4S-6ST BINDING SITE, designated SEQ ID:14898, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60079] Another function of GAM8358 is therefore inhibition of GALNAC4S-6ST (Accession NP_056976.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNAC4S-6ST.

[60080] Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 3 (galnac-t3) (GALNT3, Accession NP_004473.1) is another GAM8358 target gene, herein designated TARGET GENE. GALNT3 BINDING SITE is a target binding site found in the 3' untranslated region

of mRNA encoded by GALNT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT3 BINDING SITE, designated SEQ ID:1308, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60081] Another function of GAM8358 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 3 (galnac-t3) (GALNT3, Accession NP_004473.1), a gene which initiates O- glycosylation of serine and threonine residues. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT3.

[60082] The function of GALNT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Glycoprotein a repetitions predominant (GARP, Accession NP_005503.1) is another GAM8358 target gene, herein designated TARGET GENE. GARP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GARP, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GARP BINDING SITE, designated SEQ ID:18213, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60083] Another function of GAM8358 is therefore inhibition of Glycoprotein a repetitions predominant (GARP, Accession NP_005503.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GARP.

[60084] Gata binding protein 4 (GATA4, Accession NP_002043.1) is another GAM8358 target gene, herein designated TARGET GENE. GATA4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GATA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GATA4 BINDING SITE, designated SEQ ID:17802, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60085] Another function of GAM8358 is therefore inhibition of

Gata binding protein 4 (GATA4, Accession NP_002043.1), a gene which regulates genes critical for myocardial differentiation and function. and therefore may be associated with Cardiac hypertrophy and sex cord- derived ovarian tumors. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Cardiac hypertrophy and sex cord- derived ovarian tumors., and of other diseases and clinical conditions associated with GATA4.

[60086] The function of GATA4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Gtp cyclohydrolase i feedback regulatory protein (GCHFR, Accession NP_005249.1) is another GAM8358 target gene, herein designated TARGET GENE. GCHFR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GCHFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCHFR BINDING SITE, designated SEQ ID:18283, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60087] Another function of GAM8358 is therefore inhibition of

Gtp cyclohydrolase i feedback regulatory protein (GCHFR, Accession NP_005249.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCHFR.

[60088] Gamma-glutamyltransferase 1 (GGT1, Accession NP_005256.1) is another GAM8358 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:5411, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60089] Another function of GAM8358 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_005256.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated

with GGT1.

[60090] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Gamma-glutamyltransferase 1 (GGT1, Accession NP_038265.1) is another GAM8358 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:5411, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60091] Another function of GAM8358 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_038265.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated

with GGT1.

[60092] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1) is another GAM8358 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:5411, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60093] Another function of GAM8358 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated

with GGT1.

[60094] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Gamma-glutamyltransferase 2 (GGT2, Accession XP_290331.1) is another GAM8358 target gene, herein designated TARGET GENE. GGT2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GGT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT2 BINDING SITE, designated SEQ ID:5411, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60095] Another function of GAM8358 is therefore inhibition of Gamma-glutamyltransferase 2 (GGT2, Accession XP_290331.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGT2.

[60096] G protein-coupled receptor kinase-interactor 1 (GIT1, Accession NP_054749.1) is another GAM8358 target gene, herein designated TARGET GENE. GIT1 BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by GIT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GIT1 BINDING SITE, designated SEQ ID:599, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60097] Another function of GAM8358 is therefore inhibition of G protein-coupled receptor kinase-interactor 1 (GIT1, Accession NP_054749.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GIT1.

[60098] G protein pathway suppressor 2 (GPS2, Accession NP_004480.1) is another GAM8358 target gene, herein designated TARGET GENE. GPS2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GPS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPS2 BINDING SITE, designated SEQ ID:16530, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[60099] Another function of GAM8358 is therefore inhibition of G protein pathway suppressor 2 (GPS2, Accession NP_004480.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPS2.

[60100] Glutamate receptor, metabotropic 4 (GRM4, Accession NP_000832.1) is another GAM8358 target gene, herein designated TARGET GENE. GRM4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GRM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRM4 BINDING SITE, designated SEQ ID:1955, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60101] Another function of GAM8358 is therefore inhibition of Glutamate receptor, metabotropic 4 (GRM4, Accession NP_000832.1), a gene which is mediated by a g- protein that inhibits adenylate cyclase activity. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

GRM4.

[60102] The function of GRM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. General transcription factor *ie*, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1) is another GAM8358 target gene, herein designated TARGET GENE. GTF2E1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GTF2E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2E1 BINDING SITE, designated SEQ ID:17008, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60103] Another function of GAM8358 is therefore inhibition of General transcription factor *ie*, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2E1.

[60104] Glycophorin b (includes ss blood group) (GYPB, Accession

NP_002091.1) is another GAM8358 target gene, herein designated TARGET GENE. GYPB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GYPB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYPB BINDING SITE, designated SEQ ID:731, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60105] Another function of GAM8358 is therefore inhibition of Glycophorin b (includes ss blood group) (GYPB, Accession NP_002091.1), a gene which is a minor sialoglycoprotein in human erythrocyte membranes and determines the Ss blood group antigens. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYPB.

[60106] The function of GYPB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1095.1. Glycophorin e (GYPE, Accession NP_002093.1) is another GAM8358 target gene, herein designated TARGET GENE. GYPE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by GYPE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYPE BINDING SITE, designated SEQ ID:14090, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60107] Another function of GAM8358 is therefore inhibition of Glycophorin e (GYPE, Accession NP_002093.1), a gene which is a minor sialoglycoprotein in human erythrocyte membranes. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYPE.

[60108] The function of GYPE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1361.1.Huntingtin (huntington disease) (HD, Accession NP_002102.2) is another GAM8358 target gene, herein designated TARGET GENE. HD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of HD BINDING SITE, designated SEQ ID:11900, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60109] Another function of GAM8358 is therefore inhibition of Huntingtin (huntington disease) (HD, Accession NP_002102.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HD.

[60110] HECA (Accession NP_057301.1) is another GAM8358 target gene, herein designated TARGET GENE. HECA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HECA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HECA BINDING SITE, designated SEQ ID:2910, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60111] Another function of GAM8358 is therefore inhibition of HECA (Accession NP_057301.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HECA.

[60112] Hematopoietic protein 1 (HEM1, Accession NP_005328.1) is another GAM8358 target gene, herein designated TARGET GENE. HEM1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by HEM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEM1 BINDING SITE, designated SEQ ID:7159, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60113] Another function of GAM8358 is therefore inhibition of Hematopoietic protein 1 (HEM1, Accession NP_005328.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEM1.

[60114] Hairy/enhancer-of-split related with yrpw motif-like (HEYL, Accession NP_055386.1) is another GAM8358 target gene, herein designated TARGET GENE. HEYL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HEYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEYL BINDING

SITE, designated SEQ ID:781, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

- [60115] Another function of GAM8358 is therefore inhibition of Hairy/enhancer-of-split related with *yrpw* motif-like (HEYL, Accession NP_055386.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEYL.
- [60116] *Herv-h* ltr-associating 1 (HHLA1, Accession NP_005703.1) is another GAM8358 target gene, herein designated TARGET GENE. HHLA1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HHLA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HHLA1 BINDING SITE, designated SEQ ID:11901, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.
- [60117] Another function of GAM8358 is therefore inhibition of *Herv-h* ltr-associating 1 (HHLA1, Accession NP_005703.1), a gene which has unknown function and with low similarity to a region of *S. cerevisiae* WSC4. Ac-

cordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HHLA1.

[60118] The function of HHLA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Major histocompatibility complex, class ii, dr alpha (HLA-DRA, Accession NP_061984.1) is another GAM8358 target gene, herein designated TARGET GENE. HLA-DRA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HLA-DRA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLA-DRA BINDING SITE, designated SEQ ID:9798, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60119] Another function of GAM8358 is therefore inhibition of Major histocompatibility complex, class ii, dr alpha (HLA-DRA, Accession NP_061984.1), a gene which plays a central role in the immune system by presenting peptides derived from extracellular proteins. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with HLA-DRA.

[60120] The function of HLA-DRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM969.1.Homeo box c13 (HOXC13, Accession NP_059106.2) is another GAM8358 target gene, herein designated TARGET GENE. HOXC13 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HOXC13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HOXC13 BINDING SITE, designated SEQ ID:12196, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60121] Another function of GAM8358 is therefore inhibition of Homeo box c13 (HOXC13, Accession NP_059106.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXC13.

[60122] Histidine rich calcium binding protein (HRC, Accession NP_002143.1) is another GAM8358 target gene, herein

designated TARGET GENE. HRC BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by HRC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRC BINDING SITE, designated SEQ ID:7926, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60123] Another function of GAM8358 is therefore inhibition of Histidine rich calcium binding protein (HRC, Accession NP_002143.1), a gene which is a histidine- rich calcium-binding protein. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRC.

[60124] The function of HRC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1722.1. Histamine receptor h1 (HRH1, Accession NP_000852.1) is another GAM8358 target gene, herein designated TARGET GENE. HRH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HRH1, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH1 BINDING SITE, designated SEQ ID:9207, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60125] Another function of GAM8358 is therefore inhibition of Histamine receptor h1 (HRH1, Accession NP_000852.1), a gene which stimulates the synthesis of inositol phosphate. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRH1.

[60126] The function of HRH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.HRI (Accession NP_055228.2) is another GAM8358 target gene, herein designated TARGET GENE. HRI BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HRI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRI BINDING SITE, designated SEQ ID:17628, to the nu-

cleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60127] Another function of GAM8358 is therefore inhibition of HRI (Accession NP_055228.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRI.

[60128] Heparan sulfate (glucosamine) 3-o-sulfotransferase 3b1 (HS3ST3B1, Accession NP_006032.1) is another GAM8358 target gene, herein designated TARGET GENE. HS3ST3B1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HS3ST3B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS3ST3B1 BINDING SITE, designated SEQ ID:16195, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60129] Another function of GAM8358 is therefore inhibition of Heparan sulfate (glucosamine) 3-o-sulfotransferase 3b1 (HS3ST3B1, Accession NP_006032.1), a gene which plays a role in the generation of heparan sulfate proteoglycan. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with HS3ST3B1.

[60130] The function of HS3ST3B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1. Hydroxy- Δ^5 -steroid dehydrogenase, 3 β - and steroid Δ^5 -isomerase 2 (HSD3B2, Accession NP_000189.1) is another GAM8358 target gene, herein designated TARGET GENE. HSD3B2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSD3B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD3B2 BINDING SITE, designated SEQ ID:3135, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60131] Another function of GAM8358 is therefore inhibition of Hydroxy- Δ^5 -steroid dehydrogenase, 3 β - and steroid Δ^5 -isomerase 2 (HSD3B2, Accession NP_000189.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD3B2.

[60132] Inhibitor of dna binding 2, dominant negative helix-

loop-helix protein (ID2, Accession NP_002157.1) is another GAM8358 target gene, herein designated TARGET GENE. ID2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ID2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ID2 BINDING SITE, designated SEQ ID:19404, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60133] Another function of GAM8358 is therefore inhibition of Inhibitor of dna binding 2, dominant negative helix-loop-helix protein (ID2, Accession NP_002157.1), a gene which may be an inhibitor of tissue-specific gene expression. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ID2.

[60134] The function of ID2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM475.2. Isocitrate dehydrogenase 3 (nad+) alpha (IDH3A, Accession NP_005521.1) is another GAM8358 target gene, herein designated TARGET GENE. IDH3A

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IDH3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IDH3A BINDING SITE, designated SEQ ID:14914, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60135] Another function of GAM8358 is therefore inhibition of Isocitrate dehydrogenase 3 (nad+) alpha (IDH3A, Accession NP_005521.1), a gene which decarboxylates isocitrate into alpha-ketoglutarate in the TCA cycle. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IDH3A.

[60136] The function of IDH3A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM248.1. Interferon (alpha, beta and omega) receptor 2 (IFNAR2, Accession NP_000865.2) is another GAM8358 target gene, herein designated TARGET GENE. IFNAR2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IFNAR2, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFNAR2 BINDING SITE, designated SEQ ID:11246, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60137] Another function of GAM8358 is therefore inhibition of Interferon (alpha, beta and omega) receptor 2 (IFNAR2, Accession NP_000865.2), a gene which is a receptor for interferons alpha and beta. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFNAR2.

[60138] The function of IFNAR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Immunoglobulin superfamily, member 2 (IGSF2, Accession NP_004249.1) is another GAM8358 target gene, herein designated TARGET GENE. IGSF2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IGSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IGSF2 BIND-

ING SITE, designated SEQ ID:15726, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60139] Another function of GAM8358 is therefore inhibition of Immunoglobulin superfamily, member 2 (IGSF2, Accession NP_004249.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IGSF2.

[60140] Interleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1) is another GAM8358 target gene, herein designated TARGET GENE. IL16 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL16 BINDING SITE, designated SEQ ID:10757, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60141] Another function of GAM8358 is therefore inhibition of Interleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1), a gene which modulates T- cell activation. Accordingly, utilities of GAM8358 include diag-

nosis, prevention and treatment of diseases and clinical conditions associated with IL16.

[60142] The function of IL16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1. Interleukin 17c (IL17C, Accession NP_037410.1) is another GAM8358 target gene, herein designated TARGET GENE. IL17C BINDING SITE1 and IL17C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IL17C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL17C BINDING SITE1 and IL17C BINDING SITE2, designated SEQ ID:15783 and SEQ ID:17730 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60143] Another function of GAM8358 is therefore inhibition of Interleukin 17c (IL17C, Accession NP_037410.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL17C.

[60144] Itchy homolog e3 ubiquitin protein ligase (mouse) (ITCH, Accession NP_113671.3) is another GAM8358 target gene, herein designated TARGET GENE. ITCH BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by ITCH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITCH BINDING SITE, designated SEQ ID:8893, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60145] Another function of GAM8358 is therefore inhibition of Itchy homolog e3 ubiquitin protein ligase (mouse) (ITCH, Accession NP_113671.3), a gene which accepts ubiquitin from an e2 ubiquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to targeted substrates. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITCH.

[60146] The function of ITCH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) is another GAM8358 target gene, herein designated TARGET GENE. ITPR2 BINDING SITE is a target binding site found in the 5' untranslated

region of mRNA encoded by ITPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPR2 BINDING SITE, designated SEQ ID:7682, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60147] Another function of GAM8358 is therefore inhibition of Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPR2.

[60148] Jumonji homolog (mouse) (JMJ, Accession NP_004964.2) is another GAM8358 target gene, herein designated TARGET GENE. JMJ BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by JMJ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JMJ BINDING SITE, designated SEQ ID:1204, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60149] Another function of GAM8358 is therefore inhibition of

Jumonji homolog (mouse) (JMJ, Accession NP_004964.2), a gene which participates in the negative regulation of cell growth. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JMJ.

[60150] The function of JMJ and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Potassium voltage-gated channel, Isk-related family, member 1-like (KCNE1L, Accession NP_036414.1) is another GAM8358 target gene, herein designated TARGET GENE. KCNE1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KCNE1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNE1L BINDING SITE, designated SEQ ID:5757, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60151] Another function of GAM8358 is therefore inhibition of Potassium voltage-gated channel, Isk-related family, member 1-like (KCNE1L, Accession NP_036414.1), a gene

which is a potassium voltage- gated channel. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNE1L.

[60152] The function of KCNE1L and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.KIAA0193 (Accession NP_055581.2) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0193 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0193 BINDING SITE, designated SEQ ID:19449, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60153] Another function of GAM8358 is therefore inhibition of KIAA0193 (Accession NP_055581.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0193.

[60154] KIAA0237 (Accession NP_055562.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0237 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0237, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0237 BINDING SITE, designated SEQ ID:19327, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60155] Another function of GAM8358 is therefore inhibition of KIAA0237 (Accession NP_055562.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0237.

[60156] KIAA0298 (Accession XP_084529.6) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0298 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0298 BINDING SITE, designated SEQ ID:19243, to the

nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60157] Another function of GAM8358 is therefore inhibition of KIAA0298 (Accession XP_084529.6) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0298.

[60158] KIAA0329 (Accession NP_055659.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0329 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0329 BINDING SITE, designated SEQ ID:4476, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60159] Another function of GAM8358 is therefore inhibition of KIAA0329 (Accession NP_055659.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0329.

[60160] KIAA0377 (Accession NP_055474.1) is another GAM8358

target gene, herein designated TARGET GENE. KIAA0377 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0377 BINDING SITE, designated SEQ ID:1638, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60161] Another function of GAM8358 is therefore inhibition of KIAA0377 (Accession NP_055474.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0377.

[60162] KIAA0404 (Accession XP_290517.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0404 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0404 BINDING SITE, designated SEQ ID:18934, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[60163] Another function of GAM8358 is therefore inhibition of KIAA0404 (Accession XP_290517.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0404.

[60164] KIAA0472 (Accession XP_290898.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0472 BINDING SITE is a target binding site found in the 5` un-translated region of mRNA encoded by KIAA0472, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0472 BINDING SITE, designated SEQ ID:10981, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60165] Another function of GAM8358 is therefore inhibition of KIAA0472 (Accession XP_290898.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0472.

[60166] KIAA0495 (Accession XP_031397.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0495

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0495, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0495 BINDING SITE, designated SEQ ID:7638, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60167] Another function of GAM8358 is therefore inhibition of KIAA0495 (Accession XP_031397.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0495.

[60168] KIAA0534 (Accession XP_049349.8) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0534 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0534, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0534 BINDING SITE, designated SEQ ID:14353, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60169] Another function of GAM8358 is therefore inhibition of KIAA0534 (Accession XP_049349.8) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0534.

[60170] KIAA0551 (Accession XP_039796.7) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0551 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0551, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0551 BINDING SITE, designated SEQ ID:14105, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60171] Another function of GAM8358 is therefore inhibition of KIAA0551 (Accession XP_039796.7) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0551.

[60172] KIAA0555 (Accession NP_055605.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0555 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA0555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:10997, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60173] Another function of GAM8358 is therefore inhibition of KIAA0555 (Accession NP_055605.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0555.

[60174] KIAA0721 (Accession NP_067680.2) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0721 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0721 BINDING SITE, designated SEQ ID:13136, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60175] Another function of GAM8358 is therefore inhibition of

KIAA0721 (Accession NP_067680.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0721.

[60176] KIAA0843 (Accession NP_055760.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0843 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0843 BINDING SITE, designated SEQ ID:3729, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60177] Another function of GAM8358 is therefore inhibition of KIAA0843 (Accession NP_055760.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0843.

[60178] KIAA0962 (Accession XP_290942.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA0962 BINDING SITE1 and KIAA0962 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by KIAA0962, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0962 BINDING SITE1 and KIAA0962 BINDING SITE2, designated SEQ ID:9385 and SEQ ID:18634 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60179] Another function of GAM8358 is therefore inhibition of KIAA0962 (Accession XP_290942.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0962.

[60180] KIAA1045 (Accession XP_048592.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1045 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1045 BINDING SITE, designated SEQ ID:16854, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60181] Another function of GAM8358 is therefore inhibition of KIAA1045 (Accession XP_048592.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1045.

[60182] KIAA1191 (Accession NP_065177.2) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1191 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1191, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1191 BINDING SITE, designated SEQ ID:18347, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60183] Another function of GAM8358 is therefore inhibition of KIAA1191 (Accession NP_065177.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1191.

[60184] KIAA1328 (Accession XP_029429.4) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1328 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1328, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1328 BINDING SITE, designated SEQ ID:19188, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60185] Another function of GAM8358 is therefore inhibition of KIAA1328 (Accession XP_029429.4) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1328.

[60186] KIAA1394 (Accession XP_208522.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1394 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1394 BINDING SITE, designated SEQ ID:17260, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60187] Another function of GAM8358 is therefore inhibition of

KIAA1394 (Accession XP_208522.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1394.

[60188] KIAA1404 (Accession NP_066363.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1404 BINDING SITE1 and KIAA1404 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1404, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1404 BINDING SITE1 and KIAA1404 BINDING SITE2, designated SEQ ID:1732 and SEQ ID:7163 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60189] Another function of GAM8358 is therefore inhibition of KIAA1404 (Accession NP_066363.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1404.

[60190] KIAA1441 (Accession NP_065883.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1441

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1441 BINDING SITE, designated SEQ ID:16287, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60191] Another function of GAM8358 is therefore inhibition of KIAA1441 (Accession NP_065883.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1441.

[60192] KIAA1554 (Accession XP_290768.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1554 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1554, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1554 BINDING SITE, designated SEQ ID:19407, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60193] Another function of GAM8358 is therefore inhibition of KIAA1554 (Accession XP_290768.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1554.

[60194] KIAA1683 (Accession XP_290870.2) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1683 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1683, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1683 BINDING SITE, designated SEQ ID:6606, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60195] Another function of GAM8358 is therefore inhibition of KIAA1683 (Accession XP_290870.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1683.

[60196] KIAA1735 (Accession XP_290496.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1735 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1735 BINDING SITE, designated SEQ ID:8127, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60197] Another function of GAM8358 is therefore inhibition of KIAA1735 (Accession XP_290496.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1735.

[60198] KIAA1750 (Accession NP_277047.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1750 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1750, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1750 BINDING SITE, designated SEQ ID:2837, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60199] Another function of GAM8358 is therefore inhibition of

KIAA1750 (Accession NP_277047.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1750.

[60200] KIAA1872 (Accession NP_149053.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1872 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1872 BINDING SITE, designated SEQ ID:2574, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60201] Another function of GAM8358 is therefore inhibition of KIAA1872 (Accession NP_149053.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1872.

[60202] KIAA1915 (Accession XP_055481.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1915 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1915, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1915 BINDING SITE, designated SEQ ID:8633, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60203] Another function of GAM8358 is therefore inhibition of KIAA1915 (Accession XP_055481.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1915.

[60204] KIAA1940 (Accession XP_086981.2) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1940 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1940 BINDING SITE, designated SEQ ID:20086, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60205] Another function of GAM8358 is therefore inhibition of KIAA1940 (Accession XP_086981.2) . Accordingly, utilities

of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1940.

[60206] KIAA1949 (Accession XP_166376.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:18390, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60207] Another function of GAM8358 is therefore inhibition of KIAA1949 (Accession XP_166376.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[60208] KIAA1949 (Accession XP_300167.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded

by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:18390, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60209] Another function of GAM8358 is therefore inhibition of KIAA1949 (Accession XP_300167.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[60210] KIAA1949 (Accession XP_300202.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:18390, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60211] Another function of GAM8358 is therefore inhibition of KIAA1949 (Accession XP_300202.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[60212] KIAA2018 (Accession XP_291062.1) is another GAM8358 target gene, herein designated TARGET GENE. KIAA2018 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA2018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2018 BINDING SITE, designated SEQ ID:14076, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60213] Another function of GAM8358 is therefore inhibition of KIAA2018 (Accession XP_291062.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2018.

[60214] Kinesin family member 5b (KIF5B, Accession NP_004512.1) is another GAM8358 target gene, herein designated TARGET GENE. KIF5B BINDING SITE is a target

binding site found in the 5' untranslated region of mRNA encoded by KIF5B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF5B BINDING SITE, designated SEQ ID:13109, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60215] Another function of GAM8358 is therefore inhibition of Kinesin family member 5b (KIF5B, Accession NP_004512.1), a gene which is a microtubule-associated force-producing protein that may play a role in organelle transport. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF5B.

[60216] The function of KIF5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM861.2. Karyopherin alpha 6 (importin alpha 7) (KPNA6, Accession NP_036448.1) is another GAM8358 target gene, herein designated TARGET GENE. KPNA6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KPNA6, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KPNA6 BINDING SITE, designated SEQ ID:15175, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60217] Another function of GAM8358 is therefore inhibition of Karyopherin alpha 6 (importin alpha 7) (KPNA6, Accession NP_036448.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KPNA6.

[60218] LBP-9 (Accession NP_055368.1) is another GAM8358 target gene, herein designated TARGET GENE. LBP-9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LBP-9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LBP-9 BINDING SITE, designated SEQ ID:18984, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60219] Another function of GAM8358 is therefore inhibition of LBP-9 (Accession NP_055368.1) . Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LBP-9.

[60220] Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1) is another GAM8358 target gene, herein designated TARGET GENE. LDLR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LDLR BINDING SITE, designated SEQ ID:13935, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60221] Another function of GAM8358 is therefore inhibition of Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1), a gene which also acts as a tumor suppressor. and therefore is associated with Familial hypercholesterolemia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Familial hypercholesterolemia, and of other diseases and clinical conditions associated with LDLR.

[60222] The function of LDLR and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM99.1.Leiomodin 1 (smooth muscle) (LMOD1, Accession NP_036266.1) is another GAM8358 target gene, herein designated TARGET GENE. LMOD1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LMOD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LMOD1 BINDING SITE, designated SEQ ID:15622, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60223] Another function of GAM8358 is therefore inhibition of Leiomodin 1 (smooth muscle) (LMOD1, Accession NP_036266.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LMOD1.

[60224] LOC112885 (Accession NP_612424.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC112885 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC112885, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112885 BINDING SITE, designated SEQ ID:8726, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60225] Another function of GAM8358 is therefore inhibition of LOC112885 (Accession NP_612424.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112885.

[60226] LOC115110 (Accession XP_049825.5) is another GAM8358 target gene, herein designated TARGET GENE. LOC115110 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115110 BINDING SITE, designated SEQ ID:5560, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60227] Another function of GAM8358 is therefore inhibition of LOC115110 (Accession XP_049825.5) . Accordingly, utili-

ties of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115110.

[60228] LOC121838 (Accession XP_071772.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC121838 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC121838, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121838 BINDING SITE, designated SEQ ID:9861, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60229] Another function of GAM8358 is therefore inhibition of LOC121838 (Accession XP_071772.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121838.

[60230] LOC128308 (Accession XP_059233.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC128308 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC128308, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128308 BINDING SITE, designated SEQ ID:8512, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60231] Another function of GAM8358 is therefore inhibition of LOC128308 (Accession XP_059233.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128308.

[60232] LOC134147 (Accession NP_620164.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC134147 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC134147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134147 BINDING SITE, designated SEQ ID:13019, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60233] Another function of GAM8358 is therefore inhibition of LOC134147 (Accession NP_620164.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134147.

[60234] LOC139231 (Accession XP_060020.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC139231 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC139231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139231 BINDING SITE, designated SEQ ID:7841, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60235] Another function of GAM8358 is therefore inhibition of LOC139231 (Accession XP_060020.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139231.

[60236] LOC146488 (Accession XP_047748.5) is another GAM8358 target gene, herein designated TARGET GENE.

LOC146488 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146488 BINDING SITE, designated SEQ ID:17130, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60237] Another function of GAM8358 is therefore inhibition of LOC146488 (Accession XP_047748.5) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146488.

[60238] LOC146850 (Accession XP_097109.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC146850 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146850, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146850 BINDING SITE, designated SEQ ID:19317, to the nucleotide sequence of

GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60239] Another function of GAM8358 is therefore inhibition of LOC146850 (Accession XP_097109.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146850.

[60240] LOC147975 (Accession XP_097351.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC147975 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147975 BINDING SITE, designated SEQ ID:12919, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60241] Another function of GAM8358 is therefore inhibition of LOC147975 (Accession XP_097351.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147975.

[60242] LOC148189 (Accession XP_086087.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC148189 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC148189, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148189 BINDING SITE, designated SEQ ID:1685, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60243] Another function of GAM8358 is therefore inhibition of LOC148189 (Accession XP_086087.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148189.

[60244] LOC148930 (Accession XP_086369.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC148930 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC148930, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC148930 BINDING SITE, designated SEQ ID:8018, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60245] Another function of GAM8358 is therefore inhibition of LOC148930 (Accession XP_086369.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148930.

[60246] LOC149271 (Accession XP_086475.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC149271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149271 BINDING SITE, designated SEQ ID:1162, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60247] Another function of GAM8358 is therefore inhibition of LOC149271 (Accession XP_086475.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC149271.

[60248] LOC149448 (Accession XP_097642.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC149448 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149448 BINDING SITE, designated SEQ ID:3902, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60249] Another function of GAM8358 is therefore inhibition of LOC149448 (Accession XP_097642.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149448.

[60250] LOC149464 (Accession XP_097645.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC149464 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149464, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149464 BINDING SITE, designated SEQ ID:19340, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60251] Another function of GAM8358 is therefore inhibition of LOC149464 (Accession XP_097645.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149464.

[60252] LOC150946 (Accession XP_097977.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC150946 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150946 BINDING SITE, designated SEQ ID:12653, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60253] Another function of GAM8358 is therefore inhibition of

LOC150946 (Accession XP_097977.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150946.

[60254] LOC151154 (Accession XP_098008.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC151154 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC151154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151154 BINDING SITE, designated SEQ ID:12623, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60255] Another function of GAM8358 is therefore inhibition of LOC151154 (Accession XP_098008.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151154.

[60256] LOC152190 (Accession XP_045692.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC152190 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC152190, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152190 BINDING SITE, designated SEQ ID:9697, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60257] Another function of GAM8358 is therefore inhibition of LOC152190 (Accession XP_045692.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152190.

[60258] LOC154877 (Accession XP_098626.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE, designated SEQ ID:12900, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60259] Another function of GAM8358 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[60260] LOC157381 (Accession XP_098754.5) is another GAM8358 target gene, herein designated TARGET GENE. LOC157381 BINDING SITE1 and LOC157381 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC157381, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157381 BINDING SITE1 and LOC157381 BINDING SITE2, designated SEQ ID:11073 and SEQ ID:13288 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60261] Another function of GAM8358 is therefore inhibition of LOC157381 (Accession XP_098754.5) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157381.

[60262] LOC157531 (Accession XP_212210.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC157531 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by LOC157531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157531 BINDING SITE, designated SEQ ID:8038, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60263] Another function of GAM8358 is therefore inhibition of LOC157531 (Accession XP_212210.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157531.

[60264] LOC158318 (Accession XP_098925.7) is another GAM8358 target gene, herein designated TARGET GENE. LOC158318 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC158318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC158318 BINDING SITE, designated SEQ ID:10509, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60265] Another function of GAM8358 is therefore inhibition of LOC158318 (Accession XP_098925.7) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158318.

[60266] LOC164714 (Accession XP_104657.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC164714 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC164714, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164714 BINDING SITE, designated SEQ ID:3977, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60267] Another function of GAM8358 is therefore inhibition of LOC164714 (Accession XP_104657.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC164714.

[60268] LOC164729 (Accession XP_092976.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC164729 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC164729, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164729 BINDING SITE, designated SEQ ID:1980, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60269] Another function of GAM8358 is therefore inhibition of LOC164729 (Accession XP_092976.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164729.

[60270] LOC170371 (Accession XP_096316.5) is another GAM8358 target gene, herein designated TARGET GENE. LOC170371 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC170371, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170371 BINDING SITE, designated SEQ ID:3757, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60271] Another function of GAM8358 is therefore inhibition of LOC170371 (Accession XP_096316.5) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170371.

[60272] LOC170394 (Accession XP_096329.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC170394 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC170394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170394 BINDING SITE, designated SEQ ID:20058, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60273] Another function of GAM8358 is therefore inhibition of

LOC170394 (Accession XP_096329.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170394.

[60274] LOC196996 (Accession XP_113796.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC196996 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC196996, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196996 BINDING SITE, designated SEQ ID:10671, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60275] Another function of GAM8358 is therefore inhibition of LOC196996 (Accession XP_113796.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196996.

[60276] LOC200312 (Accession XP_117224.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC200312 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC200312, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200312 BINDING SITE, designated SEQ ID:4936, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60277] Another function of GAM8358 is therefore inhibition of LOC200312 (Accession XP_117224.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200312.

[60278] LOC221122 (Accession XP_167867.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC221122 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221122 BINDING SITE, designated SEQ ID:14736, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60279] Another function of GAM8358 is therefore inhibition of LOC221122 (Accession XP_167867.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221122.

[60280] LOC253216 (Accession XP_170765.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC253216 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC253216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253216 BINDING SITE, designated SEQ ID:16497, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60281] Another function of GAM8358 is therefore inhibition of LOC253216 (Accession XP_170765.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253216.

[60282] LOC256614 (Accession XP_172864.1) is another

GAM8358 target gene, herein designated TARGET GENE. LOC256614 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256614 BINDING SITE, designated SEQ ID:7454, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60283] Another function of GAM8358 is therefore inhibition of LOC256614 (Accession XP_172864.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256614.

[60284] LOC256949 (Accession XP_170882.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC256949 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256949 BINDING SITE, design-

nated SEQ ID:1184, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60285] Another function of GAM8358 is therefore inhibition of LOC256949 (Accession XP_170882.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256949.

[60286] LOC282972 (Accession XP_210837.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC282972 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282972 BINDING SITE, designated SEQ ID:8517, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60287] Another function of GAM8358 is therefore inhibition of LOC282972 (Accession XP_210837.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC282972.

[60288] LOC282997 (Accession XP_208473.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC282997 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282997, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282997 BINDING SITE, designated SEQ ID:17627, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60289] Another function of GAM8358 is therefore inhibition of LOC282997 (Accession XP_208473.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282997.

[60290] LOC283166 (Accession XP_210906.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC283166 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283166 BINDING SITE, designated SEQ ID:17655, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60291] Another function of GAM8358 is therefore inhibition of LOC283166 (Accession XP_210906.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283166.

[60292] LOC283357 (Accession XP_210991.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC283357 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283357, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283357 BINDING SITE, designated SEQ ID:13210, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60293] Another function of GAM8358 is therefore inhibition of LOC283357 (Accession XP_210991.1) . Accordingly, utili-

ties of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283357.

[60294] LOC283437 (Accession XP_211038.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC283437 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283437, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283437 BINDING SITE, designated SEQ ID:3817, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60295] Another function of GAM8358 is therefore inhibition of LOC283437 (Accession XP_211038.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283437.

[60296] LOC283584 (Accession XP_211108.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC283584 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283584, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283584 BINDING SITE, designated SEQ ID:1675, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60297] Another function of GAM8358 is therefore inhibition of LOC283584 (Accession XP_211108.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283584.

[60298] LOC283816 (Accession XP_208859.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC283816 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283816, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283816 BINDING SITE, designated SEQ ID:4085, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60299] Another function of GAM8358 is therefore inhibition of LOC283816 (Accession XP_208859.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283816.

[60300] LOC283908 (Accession XP_211252.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC283908 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283908, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283908 BINDING SITE, designated SEQ ID:3468, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60301] Another function of GAM8358 is therefore inhibition of LOC283908 (Accession XP_211252.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283908.

[60302] LOC284113 (Accession XP_209021.1) is another GAM8358 target gene, herein designated TARGET GENE.

LOC284113 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284113 BINDING SITE, designated SEQ ID:9360, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60303] Another function of GAM8358 is therefore inhibition of LOC284113 (Accession XP_209021.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284113.

[60304] LOC284167 (Accession XP_208171.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284167 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284167 BINDING SITE, designated SEQ ID:15015, to the nucleotide sequence of

GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60305] Another function of GAM8358 is therefore inhibition of LOC284167 (Accession XP_208171.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284167.

[60306] LOC284214 (Accession XP_302709.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284214 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284214, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284214 BINDING SITE, designated SEQ ID:5281, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60307] Another function of GAM8358 is therefore inhibition of LOC284214 (Accession XP_302709.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284214.

[60308] LOC284297 (Accession XP_209112.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284297 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284297, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284297 BINDING SITE, designated SEQ ID:2290, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60309] Another function of GAM8358 is therefore inhibition of LOC284297 (Accession XP_209112.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284297.

[60310] LOC284360 (Accession XP_211433.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284360 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284360 BINDING SITE, designated SEQ ID:6189, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60311] Another function of GAM8358 is therefore inhibition of LOC284360 (Accession XP_211433.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284360.

[60312] LOC284515 (Accession XP_208210.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284515 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284515, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284515 BINDING SITE, designated SEQ ID:1267, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60313] Another function of GAM8358 is therefore inhibition of LOC284515 (Accession XP_208210.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284515.

[60314] LOC284541 (Accession XP_208213.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284541 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284541, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284541 BINDING SITE, designated SEQ ID:13630, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60315] Another function of GAM8358 is therefore inhibition of LOC284541 (Accession XP_208213.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284541.

[60316] LOC284613 (Accession XP_209289.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284613 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284613, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284613 BINDING SITE, designated SEQ ID:7866, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60317] Another function of GAM8358 is therefore inhibition of LOC284613 (Accession XP_209289.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284613.

[60318] LOC284647 (Accession XP_211569.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284647 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284647 BINDING SITE, designated SEQ ID:8597, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60319] Another function of GAM8358 is therefore inhibition of

LOC284647 (Accession XP_211569.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284647.

[60320] LOC284691 (Accession XP_209321.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284691 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284691, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284691 BINDING SITE, designated SEQ ID:19474, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60321] Another function of GAM8358 is therefore inhibition of LOC284691 (Accession XP_209321.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284691.

[60322] LOC284693 (Accession XP_209323.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284693 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC284693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284693 BINDING SITE, designated SEQ ID:8248, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60323] Another function of GAM8358 is therefore inhibition of LOC284693 (Accession XP_209323.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284693.

[60324] LOC284731 (Accession XP_211604.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC284731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284731 BINDING SITE, designated SEQ ID:10087, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60325] Another function of GAM8358 is therefore inhibition of LOC284731 (Accession XP_211604.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284731.

[60326] LOC284732 (Accession XP_211608.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284732 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284732, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284732 BINDING SITE, designated SEQ ID:19911, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60327] Another function of GAM8358 is therefore inhibition of LOC284732 (Accession XP_211608.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284732.

[60328] LOC284805 (Accession XP_209371.1) is another

GAM8358 target gene, herein designated TARGET GENE. LOC284805 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284805 BINDING SITE, designated SEQ ID:1280, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60329] Another function of GAM8358 is therefore inhibition of LOC284805 (Accession XP_209371.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284805.

[60330] LOC284899 (Accession XP_211680.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC284899 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284899 BINDING SITE, design-

nated SEQ ID:9090, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60331] Another function of GAM8358 is therefore inhibition of LOC284899 (Accession XP_211680.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284899.

[60332] LOC285036 (Accession XP_210798.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285036 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285036 BINDING SITE, designated SEQ ID:5411, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60333] Another function of GAM8358 is therefore inhibition of LOC285036 (Accession XP_210798.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285036.

[60334] LOC285392 (Accession XP_211879.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285392 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285392 BINDING SITE, designated SEQ ID:19896, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60335] Another function of GAM8358 is therefore inhibition of LOC285392 (Accession XP_211879.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285392.

[60336] LOC285397 (Accession XP_211876.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285397 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285397 BINDING SITE, designated SEQ ID:19532, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60337] Another function of GAM8358 is therefore inhibition of LOC285397 (Accession XP_211876.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285397.

[60338] LOC285478 (Accession XP_211909.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285478 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285478 BINDING SITE, designated SEQ ID:11311, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60339] Another function of GAM8358 is therefore inhibition of LOC285478 (Accession XP_211909.1) . Accordingly, utili-

ties of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285478.

[60340] LOC285587 (Accession XP_211947.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285587 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285587 BINDING SITE, designated SEQ ID:18189, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60341] Another function of GAM8358 is therefore inhibition of LOC285587 (Accession XP_211947.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285587.

[60342] LOC285602 (Accession XP_209676.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285602 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC285602, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285602 BINDING SITE, designated SEQ ID:4457, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60343] Another function of GAM8358 is therefore inhibition of LOC285602 (Accession XP_209676.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285602.

[60344] LOC285705 (Accession XP_209726.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285705 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285705, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285705 BINDING SITE, designated SEQ ID:13089, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60345] Another function of GAM8358 is therefore inhibition of LOC285705 (Accession XP_209726.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285705.

[60346] LOC285762 (Accession XP_212011.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285762 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285762, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285762 BINDING SITE, designated SEQ ID:12096, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60347] Another function of GAM8358 is therefore inhibition of LOC285762 (Accession XP_212011.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285762.

[60348] LOC285858 (Accession XP_212037.1) is another GAM8358 target gene, herein designated TARGET GENE.

LOC285858 BINDING SITE1 and LOC285858 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285858, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285858 BINDING SITE1 and LOC285858 BINDING SITE2, designated SEQ ID:4884 and SEQ ID:6422 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60349] Another function of GAM8358 is therefore inhibition of LOC285858 (Accession XP_212037.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285858.

[60350] LOC285924 (Accession XP_209816.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285924 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285924 BINDING SITE, design-

nated SEQ ID:7453, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60351] Another function of GAM8358 is therefore inhibition of LOC285924 (Accession XP_209816.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285924.

[60352] LOC285931 (Accession NP_777609.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285931 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285931 BINDING SITE, designated SEQ ID:17650, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60353] Another function of GAM8358 is therefore inhibition of LOC285931 (Accession NP_777609.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285931.

[60354] LOC285940 (Accession XP_208366.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC285940 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285940 BINDING SITE, designated SEQ ID:13769, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60355] Another function of GAM8358 is therefore inhibition of LOC285940 (Accession XP_208366.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285940.

[60356] LOC286016 (Accession XP_209853.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286016 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286016, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286016 BINDING SITE, designated SEQ ID:3955, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60357] Another function of GAM8358 is therefore inhibition of LOC286016 (Accession XP_209853.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286016.

[60358] LOC286052 (Accession XP_212152.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286052 BINDING SITE1 and LOC286052 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286052, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286052 BINDING SITE1 and LOC286052 BINDING SITE2, designated SEQ ID:4733 and SEQ ID:1344 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60359] Another function of GAM8358 is therefore inhibition of

LOC286052 (Accession XP_212152.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286052.

[60360] LOC286076 (Accession XP_209889.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286076 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286076, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286076 BINDING SITE, designated SEQ ID:10597, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60361] Another function of GAM8358 is therefore inhibition of LOC286076 (Accession XP_209889.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286076.

[60362] LOC286078 (Accession XP_212163.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286078 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC286078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286078 BINDING SITE, designated SEQ ID:6499, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60363] Another function of GAM8358 is therefore inhibition of LOC286078 (Accession XP_212163.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286078.

[60364] LOC286121 (Accession XP_212184.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC286121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286121 BINDING SITE, designated SEQ ID:9669, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60365] Another function of GAM8358 is therefore inhibition of LOC286121 (Accession XP_212184.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286121.

[60366] LOC286217 (Accession XP_212232.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286217 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286217, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286217 BINDING SITE, designated SEQ ID:4906, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60367] Another function of GAM8358 is therefore inhibition of LOC286217 (Accession XP_212232.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286217.

[60368] LOC286374 (Accession XP_212293.1) is another

GAM8358 target gene, herein designated TARGET GENE. LOC286374 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286374, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286374 BINDING SITE, designated SEQ ID:18959, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60369] Another function of GAM8358 is therefore inhibition of LOC286374 (Accession XP_212293.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286374.

[60370] LOC286404 (Accession XP_210036.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286404 BINDING SITE1 and LOC286404 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC286404, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC286404 BINDING SITE1 and LOC286404 BINDING SITE2, designated SEQ ID:4632 and SEQ ID:4632 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60371] Another function of GAM8358 is therefore inhibition of LOC286404 (Accession XP_210036.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286404.

[60372] LOC286404 (Accession XP_210036.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286404 BINDING SITE1 and LOC286404 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC286404, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286404 BINDING SITE1 and LOC286404 BINDING SITE2, designated SEQ ID:3416 and SEQ ID:1033 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60373] Another function of GAM8358 is therefore inhibition of LOC286404 (Accession XP_210036.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286404.

[60374] LOC286456 (Accession XP_210057.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286456 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286456 BINDING SITE, designated SEQ ID:3469, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60375] Another function of GAM8358 is therefore inhibition of LOC286456 (Accession XP_210057.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286456.

[60376] LOC286493 (Accession XP_208437.1) is another GAM8358 target gene, herein designated TARGET GENE.

LOC286493 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286493 BINDING SITE, designated SEQ ID:1737, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60377] Another function of GAM8358 is therefore inhibition of LOC286493 (Accession XP_208437.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286493.

[60378] LOC286529 (Accession XP_210090.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC286529 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286529, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286529 BINDING SITE, designated SEQ ID:13990, to the nucleotide sequence of

GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60379] Another function of GAM8358 is therefore inhibition of LOC286529 (Accession XP_210090.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286529.

[60380] LOC338588 (Accession XP_294659.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC338588 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338588, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338588 BINDING SITE, designated SEQ ID:12673, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60381] Another function of GAM8358 is therefore inhibition of LOC338588 (Accession XP_294659.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338588.

[60382] LOC338773 (Accession XP_290570.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC338773 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338773, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338773 BINDING SITE, designated SEQ ID:5276, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60383] Another function of GAM8358 is therefore inhibition of LOC338773 (Accession XP_290570.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338773.

[60384] LOC338811 (Accession XP_290586.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC338811 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338811, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC338811 BINDING SITE, designated SEQ ID:1697, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60385] Another function of GAM8358 is therefore inhibition of LOC338811 (Accession XP_290586.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338811.

[60386] LOC338959 (Accession XP_294754.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC338959 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338959, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338959 BINDING SITE, designated SEQ ID:4800, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60387] Another function of GAM8358 is therefore inhibition of LOC338959 (Accession XP_294754.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC338959.

[60388] LOC339059 (Accession XP_290682.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339059 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339059, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339059 BINDING SITE, designated SEQ ID:20096, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60389] Another function of GAM8358 is therefore inhibition of LOC339059 (Accession XP_290682.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339059.

[60390] LOC339149 (Accession XP_294830.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339149 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339149, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339149 BINDING SITE, designated SEQ ID:10008, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60391] Another function of GAM8358 is therefore inhibition of LOC339149 (Accession XP_294830.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339149.

[60392] LOC339161 (Accession XP_294835.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339161 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339161 BINDING SITE, designated SEQ ID:13786, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60393] Another function of GAM8358 is therefore inhibition of

LOC339161 (Accession XP_294835.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339161.

[60394] LOC339290 (Accession XP_294901.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339290 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339290 BINDING SITE, designated SEQ ID:11490, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60395] Another function of GAM8358 is therefore inhibition of LOC339290 (Accession XP_294901.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339290.

[60396] LOC339305 (Accession XP_297112.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339305 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC339305, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339305 BINDING SITE, designated SEQ ID:11710, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60397] Another function of GAM8358 is therefore inhibition of LOC339305 (Accession XP_297112.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339305.

[60398] LOC339442 (Accession XP_294957.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339442 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339442 BINDING SITE, designated SEQ ID:14243, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60399] Another function of GAM8358 is therefore inhibition of LOC339442 (Accession XP_294957.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339442.

[60400] LOC339459 (Accession XP_290907.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC339459 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339459 BINDING SITE, designated SEQ ID:10510, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60401] Another function of GAM8358 is therefore inhibition of LOC339459 (Accession XP_290907.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339459.

[60402] LOC339607 (Accession XP_290962.1) is another

GAM8358 target gene, herein designated TARGET GENE. LOC339607 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339607 BINDING SITE, designated SEQ ID:9001, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60403] Another function of GAM8358 is therefore inhibition of LOC339607 (Accession XP_290962.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339607.

[60404] LOC339685 (Accession XP_295032.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339685 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339685, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339685 BINDING SITE, design-

nated SEQ ID:18585, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60405] Another function of GAM8358 is therefore inhibition of LOC339685 (Accession XP_295032.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339685.

[60406] LOC339914 (Accession XP_295099.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC339914 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339914, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339914 BINDING SITE, designated SEQ ID:7941, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60407] Another function of GAM8358 is therefore inhibition of LOC339914 (Accession XP_295099.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339914.

[60408] LOC340204 (Accession XP_291169.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC340204 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340204 BINDING SITE, designated SEQ ID:4985, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60409] Another function of GAM8358 is therefore inhibition of LOC340204 (Accession XP_291169.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340204.

[60410] LOC340232 (Accession XP_290386.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC340232 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340232 BINDING SITE, designated SEQ ID:6120, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60411] Another function of GAM8358 is therefore inhibition of LOC340232 (Accession XP_290386.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340232.

[60412] LOC340290 (Accession XP_291214.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC340290 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340290 BINDING SITE, designated SEQ ID:14581, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60413] Another function of GAM8358 is therefore inhibition of LOC340290 (Accession XP_291214.1) . Accordingly, utili-

ties of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340290.

[60414] LOC344782 (Accession XP_298281.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC344782 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC344782, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC344782 BINDING SITE, designated SEQ ID:17217, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60415] Another function of GAM8358 is therefore inhibition of LOC344782 (Accession XP_298281.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC344782.

[60416] LOC345749 (Accession XP_298978.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC345749 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC345749, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345749 BINDING SITE, designated SEQ ID:9069, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60417] Another function of GAM8358 is therefore inhibition of LOC345749 (Accession XP_298978.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345749.

[60418] LOC347166 (Accession XP_294530.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC347166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347166 BINDING SITE, designated SEQ ID:13274, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60419] Another function of GAM8358 is therefore inhibition of LOC347166 (Accession XP_294530.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347166.

[60420] LOC347767 (Accession XP_300531.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC347767 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC347767, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347767 BINDING SITE, designated SEQ ID:6985, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60421] Another function of GAM8358 is therefore inhibition of LOC347767 (Accession XP_300531.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347767.

[60422] LOC347803 (Accession XP_302604.1) is another GAM8358 target gene, herein designated TARGET GENE.

LOC347803 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC347803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347803 BINDING SITE, designated SEQ ID:13761, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60423] Another function of GAM8358 is therefore inhibition of LOC347803 (Accession XP_302604.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347803.

[60424] LOC348121 (Accession XP_302567.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348121 BINDING SITE, designated SEQ ID:17997, to the nucleotide sequence of

GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60425] Another function of GAM8358 is therefore inhibition of LOC348121 (Accession XP_302567.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348121.

[60426] LOC348155 (Accession XP_211219.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348155 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348155 BINDING SITE, designated SEQ ID:2553, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60427] Another function of GAM8358 is therefore inhibition of LOC348155 (Accession XP_211219.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348155.

[60428] LOC348209 (Accession XP_300304.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348209 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348209 BINDING SITE, designated SEQ ID:17130, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60429] Another function of GAM8358 is therefore inhibition of LOC348209 (Accession XP_300304.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348209.

[60430] LOC348258 (Accession XP_300686.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348258 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348258, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348258 BINDING SITE, designated SEQ ID:12407, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60431] Another function of GAM8358 is therefore inhibition of LOC348258 (Accession XP_300686.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348258.

[60432] LOC348389 (Accession XP_302739.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348389 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348389, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348389 BINDING SITE, designated SEQ ID:7856, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60433] Another function of GAM8358 is therefore inhibition of LOC348389 (Accession XP_302739.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348389.

[60434] LOC348396 (Accession XP_300729.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348396 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348396, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348396 BINDING SITE, designated SEQ ID:10069, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60435] Another function of GAM8358 is therefore inhibition of LOC348396 (Accession XP_300729.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348396.

[60436] LOC348761 (Accession XP_302869.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348761 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348761, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348761 BINDING SITE, designated SEQ ID:17866, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60437] Another function of GAM8358 is therefore inhibition of LOC348761 (Accession XP_302869.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348761.

[60438] LOC348768 (Accession XP_302883.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC348768 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348768, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348768 BINDING SITE, designated SEQ ID:6580, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60439] Another function of GAM8358 is therefore inhibition of

LOC348768 (Accession XP_302883.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348768.

[60440] LOC349101 (Accession XP_173186.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC349101 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349101 BINDING SITE, designated SEQ ID:7453, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60441] Another function of GAM8358 is therefore inhibition of LOC349101 (Accession XP_173186.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349101.

[60442] LOC349278 (Accession XP_301004.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC349278 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC349278, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349278 BINDING SITE, designated SEQ ID:10509, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60443] Another function of GAM8358 is therefore inhibition of LOC349278 (Accession XP_301004.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349278.

[60444] LOC349302 (Accession XP_301017.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC349302 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349302, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349302 BINDING SITE, designated SEQ ID:10509, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60445] Another function of GAM8358 is therefore inhibition of LOC349302 (Accession XP_301017.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349302.

[60446] LOC349337 (Accession XP_301037.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC349337 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349337 BINDING SITE, designated SEQ ID:13247, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60447] Another function of GAM8358 is therefore inhibition of LOC349337 (Accession XP_301037.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349337.

[60448] LOC349430 (Accession XP_301084.1) is another

GAM8358 target gene, herein designated TARGET GENE. LOC349430 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349430, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349430 BINDING SITE, designated SEQ ID:1033, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60449] Another function of GAM8358 is therefore inhibition of LOC349430 (Accession XP_301084.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349430.

[60450] LOC350176 (Accession XP_303855.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC350176 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC350176, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350176 BINDING SITE, design-

nated SEQ ID:16322, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60451] Another function of GAM8358 is therefore inhibition of LOC350176 (Accession XP_303855.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350176.

[60452] LOC350717 (Accession XP_303117.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC350717 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC350717, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350717 BINDING SITE, designated SEQ ID:1938, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60453] Another function of GAM8358 is therefore inhibition of LOC350717 (Accession XP_303117.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC350717.

[60454] LOC350897 (Accession XP_303256.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC350897 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC350897, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350897 BINDING SITE, designated SEQ ID:18754, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60455] Another function of GAM8358 is therefore inhibition of LOC350897 (Accession XP_303256.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350897.

[60456] LOC350935 (Accession XP_304543.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC350935 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC350935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350935 BINDING SITE, designated SEQ ID:17196, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60457] Another function of GAM8358 is therefore inhibition of LOC350935 (Accession XP_304543.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350935.

[60458] LOC51236 (Accession NP_057542.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC51236 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51236, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51236 BINDING SITE, designated SEQ ID:19076, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60459] Another function of GAM8358 is therefore inhibition of LOC51236 (Accession NP_057542.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC51236.

[60460] LOC55954 (Accession NP_061976.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC55954 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC55954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55954 BINDING SITE, designated SEQ ID:17880, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60461] Another function of GAM8358 is therefore inhibition of LOC55954 (Accession NP_061976.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55954.

[60462] LOC81558 (Accession NP_110429.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC81558 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC81558, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC81558 BINDING SITE, designated SEQ ID:16662, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60463] Another function of GAM8358 is therefore inhibition of LOC81558 (Accession NP_110429.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC81558.

[60464] LOC90167 (Accession XP_029570.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC90167 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90167 BINDING SITE, designated SEQ ID:4312, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60465] Another function of GAM8358 is therefore inhibition of LOC90167 (Accession XP_029570.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC90167.

[60466] LOC92078 (Accession XP_042684.1) is another GAM8358 target gene, herein designated TARGET GENE. LOC92078 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC92078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92078 BINDING SITE, designated SEQ ID:1696, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60467] Another function of GAM8358 is therefore inhibition of LOC92078 (Accession XP_042684.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92078.

[60468] LOC92267 (Accession XP_043979.3) is another GAM8358 target gene, herein designated TARGET GENE. LOC92267 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92267, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC92267 BINDING SITE, designated SEQ ID:2289, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60469] Another function of GAM8358 is therefore inhibition of LOC92267 (Accession XP_043979.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92267.

[60470] LOC92973 (Accession XP_048529.2) is another GAM8358 target gene, herein designated TARGET GENE. LOC92973 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC92973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92973 BINDING SITE, designated SEQ ID:7336, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60471] Another function of GAM8358 is therefore inhibition of LOC92973 (Accession XP_048529.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92973.

[60472] Leukotriene b4 receptor 2 (LTB4R2, Accession NP_062813.1) is another GAM8358 target gene, herein designated TARGET GENE. LTB4R2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LTB4R2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTB4R2 BINDING SITE, designated SEQ ID:15287, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60473] Another function of GAM8358 is therefore inhibition of Leukotriene b4 receptor 2 (LTB4R2, Accession NP_062813.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTB4R2.

[60474] Lymphocyte antigen 9 (LY9, Accession NP_002339.1) is another GAM8358 target gene, herein designated TARGET GENE. LY9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LY9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LY9 BINDING SITE, designated SEQ ID:3090, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60475] Another function of GAM8358 is therefore inhibition of Lymphocyte antigen 9 (LY9, Accession NP_002339.1), a gene which may participate in adhesion reactions between t lymphocytes and accessory cells by homophilic interaction. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LY9.

[60476] The function of LY9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM304.1.V-yes-1 yamaguchi sarcoma viral related oncogene homolog (LYN, Accession NP_002341.1) is another GAM8358 target gene, herein designated TARGET GENE. LYN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LYN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYN BINDING SITE, designated SEQ ID:12638, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[60477] Another function of GAM8358 is therefore inhibition of V-yes-1 yamaguchi sarcoma viral related oncogene homolog (LYN, Accession NP_002341.1), a gene which is a Tyrosine kinase with similarity to murine tyrosine kinase p56lck; similar to v-yes protein and the gene products of v-fgr and v-src. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYN.

[60478] The function of LYN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.Mad, mothers against decapentaplegic homolog 6 (drosophila) (MADH6, Accession NP_005576.2) is another GAM8358 target gene, herein designated TARGET GENE. MADH6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MADH6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADH6 BINDING SITE, designated SEQ ID:17896, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ

ID:255.

[60479] Another function of GAM8358 is therefore inhibition of Mad, mothers against decapentaplegic homolog 6 (drosophila) (MADH6, Accession NP_005576.2), a gene which may affect transcription in response to TGF- β superfamily signaling pathways, inhibits BMP/Smad1 (MADH1) signaling. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADH6.

[60480] The function of MADH6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM357.2.MAGEB6 (Accession NP_775794.2) is another GAM8358 target gene, herein designated TARGET GENE. MAGEB6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MAGEB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEB6 BINDING SITE, designated SEQ ID:12419, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60481] Another function of GAM8358 is therefore inhibition of MAGEB6 (Accession NP_775794.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEB6.

[60482] Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_660143.1) is another GAM8358 target gene, herein designated TARGET GENE. MAP2K5 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP2K5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K5 BINDING SITE, designated SEQ ID:3777, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60483] Another function of GAM8358 is therefore inhibition of Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_660143.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K5.

[60484] Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_002748.1) is another GAM8358 target gene,

herein designated TARGET GENE. MAP2K5 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP2K5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K5 BINDING SITE, designated SEQ ID:3777, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60485] Another function of GAM8358 is therefore inhibition of Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_002748.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K5.

[60486] Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_660144.1) is another GAM8358 target gene, herein designated TARGET GENE. MAP2K5 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP2K5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K5 BINDING SITE, designated SEQ ID:3777, to the

nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60487] Another function of GAM8358 is therefore inhibition of Mitogen-activated protein kinase kinase 5 (MAP2K5, Accession NP_660144.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K5.

[60488] MAPBPIP (Accession NP_054736.1) is another GAM8358 target gene, herein designated TARGET GENE. MAPBPIP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAPBPIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPBPIP BINDING SITE, designated SEQ ID:6096, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60489] Another function of GAM8358 is therefore inhibition of MAPBPIP (Accession NP_054736.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPBPIP.

[60490] Mitogen-activated protein kinase 13 (MAPK13, Accession

NP_002745.1) is another GAM8358 target gene, herein designated TARGET GENE. MAPK13 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MAPK13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK13 BINDING SITE, designated SEQ ID:6864, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60491] Another function of GAM8358 is therefore inhibition of Mitogen-activated protein kinase 13 (MAPK13, Accession NP_002745.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK13.

[60492] MAST205 (Accession NP_055927.1) is another GAM8358 target gene, herein designated TARGET GENE. MAST205 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAST205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAST205 BINDING SITE, designated SEQ ID:6973, to the

nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60493] Another function of GAM8358 is therefore inhibition of MAST205 (Accession NP_055927.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAST205.

[60494] MBIP (Accession NP_057670.1) is another GAM8358 target gene, herein designated TARGET GENE. MBIP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MBIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MBIP BINDING SITE, designated SEQ ID:6554, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60495] Another function of GAM8358 is therefore inhibition of MBIP (Accession NP_057670.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBIP.

[60496] Mannosyl (alpha-1,3-)-glycoprotein beta-1,4-n-acetylglucosaminyltransferase, isoenzyme b

(MGAT4B, Accession NP_463459.1) is another GAM8358 target gene, herein designated TARGET GENE. MGAT4B BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MGAT4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGAT4B BINDING SITE, designated SEQ ID:6555, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60497] Another function of GAM8358 is therefore inhibition of Mannosyl (alpha-1,3-)-glycoprotein beta-1,4-n-acetylglucosaminyltransferase, isoenzyme b (MGAT4B, Accession NP_463459.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGAT4B.

[60498] MGC1136 (Accession NP_076930.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC1136 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC1136, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC1136 BINDING SITE, designated SEQ ID:2422, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60499] Another function of GAM8358 is therefore inhibition of MGC1136 (Accession NP_076930.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC1136.

[60500] MGC14859 (Accession XP_030295.3) is another GAM8358 target gene, herein designated TARGET GENE. MGC14859 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14859 BINDING SITE, designated SEQ ID:2435, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60501] Another function of GAM8358 is therefore inhibition of MGC14859 (Accession XP_030295.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC14859.

[60502] MGC15523 (Accession NP_612637.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC15523 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC15523, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15523 BINDING SITE, designated SEQ ID:19724, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60503] Another function of GAM8358 is therefore inhibition of MGC15523 (Accession NP_612637.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15523.

[60504] MGC15885 (Accession XP_294758.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC15885 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC15885, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC15885 BINDING SITE, designated SEQ ID:2341, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60505] Another function of GAM8358 is therefore inhibition of MGC15885 (Accession XP_294758.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15885.

[60506] MGC17330 (Accession NP_443112.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC17330 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC17330, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17330 BINDING SITE, designated SEQ ID:4035, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60507] Another function of GAM8358 is therefore inhibition of MGC17330 (Accession NP_443112.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC17330.

[60508] MGC20398 (Accession NP_443089.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC20398 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC20398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20398 BINDING SITE, designated SEQ ID:1889, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60509] Another function of GAM8358 is therefore inhibition of MGC20398 (Accession NP_443089.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20398.

[60510] MGC23885 (Accession NP_689714.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC23885 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC23885, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC23885 BINDING SITE, designated SEQ ID:11074, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60511] Another function of GAM8358 is therefore inhibition of MGC23885 (Accession NP_689714.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC23885.

[60512] MGC32065 (Accession NP_695003.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC32065 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC32065, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC32065 BINDING SITE, designated SEQ ID:15890, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60513] Another function of GAM8358 is therefore inhibition of MGC32065 (Accession NP_695003.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC32065.

[60514] MGC34830 (Accession NP_689527.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC34830 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC34830, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34830 BINDING SITE, designated SEQ ID:12612, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60515] Another function of GAM8358 is therefore inhibition of MGC34830 (Accession NP_689527.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34830.

[60516] MGC39325 (Accession NP_671722.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC39325 BINDING SITE1 and MGC39325 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC39325, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39325 BINDING SITE1

and MGC39325 BINDING SITE2, designated SEQ ID:7913 and SEQ ID:15215 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60517] Another function of GAM8358 is therefore inhibition of MGC39325 (Accession NP_671722.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39325.

[60518] MGC40555 (Accession NP_689498.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC40555 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC40555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40555 BINDING SITE, designated SEQ ID:10027, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60519] Another function of GAM8358 is therefore inhibition of MGC40555 (Accession NP_689498.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC40555.

[60520] MGC42630 (Accession NP_787119.1) is another GAM8358 target gene, herein designated TARGET GENE. MGC42630 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC42630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC42630 BINDING SITE, designated SEQ ID:10509, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60521] Another function of GAM8358 is therefore inhibition of MGC42630 (Accession NP_787119.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC42630.

[60522] MGC5391 (Accession NP_116129.2) is another GAM8358 target gene, herein designated TARGET GENE. MGC5391 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC5391, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC5391 BINDING SITE, designated SEQ ID:12983, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60523] Another function of GAM8358 is therefore inhibition of MGC5391 (Accession NP_116129.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5391.

[60524] Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009220.1) is another GAM8358 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4104, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60525] Another function of GAM8358 is therefore inhibition of Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession

NP_009220.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[60526] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo- endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1) is another GAM8358 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4104, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60527] Another function of GAM8358 is therefore inhibition of Membrane metallo- endopeptidase (neutral endopepti-

dase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[60528] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo- endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1) is another GAM8358 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4104, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60529] Another function of GAM8358 is therefore inhibition of

Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1), a gene which is thermolysin– like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[60530] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009218.1) is another GAM8358 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4104, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60531] Another function of GAM8358 is therefore inhibition of Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009218.1), a gene which is thermolysin– like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[60532] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Matrix metalloproteinase 2 (gelatinase a, 72kda gelatinase, 72kda type iv collagenase) (MMP2, Accession NP_004521.1) is another GAM8358 target gene, herein designated TARGET GENE. MMP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMP2 BINDING SITE, designated SEQ ID:17651, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also design-

nated SEQ ID:255.

[60533] Another function of GAM8358 is therefore inhibition of Matrix metalloproteinase 2 (gelatinase a, 72kda gelatinase, 72kda type iv collagenase) (MMP2, Accession NP_004521.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP2.

[60534] MOST2 (Accession NP_064635.1) is another GAM8358 target gene, herein designated TARGET GENE. MOST2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MOST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOST2 BINDING SITE, designated SEQ ID:993, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60535] Another function of GAM8358 is therefore inhibition of MOST2 (Accession NP_064635.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOST2.

[60536] Membrane protein, palmitoylated 2 (maguk p55 subfamily member 2) (MPP2, Accession NP_005365.2) is another

GAM8358 target gene, herein designated TARGET GENE. MPP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MPP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPP2 BINDING SITE, designated SEQ ID:3308, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60537] Another function of GAM8358 is therefore inhibition of Membrane protein, palmitoylated 2 (maguk p55 subfamily member 2) (MPP2, Accession NP_005365.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPP2.

[60538] Mitochondrial ribosomal protein I9 (MRPL9, Accession NP_113608.1) is another GAM8358 target gene, herein designated TARGET GENE. MRPL9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MRPL9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL9 BINDING SITE, designated

SEQ ID:14139, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60539] Another function of GAM8358 is therefore inhibition of Mitochondrial ribosomal protein I9 (MRPL9, Accession NP_113608.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL9.

[60540] Musashi homolog 2 (drosophila) (MSI2, Accession NP_733839.1) is another GAM8358 target gene, herein designated TARGET GENE. MSI2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MSI2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSI2 BINDING SITE, designated SEQ ID:13149, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60541] Another function of GAM8358 is therefore inhibition of Musashi homolog 2 (drosophila) (MSI2, Accession NP_733839.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with MSI2.

[60542] 5,10-methylenetetrahydrofolate reductase (nadph) (MTHFR, Accession NP_005948.1) is another GAM8358 target gene, herein designated TARGET GENE. MTHFR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MTHFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTHFR BINDING SITE, designated SEQ ID:8401, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60543] Another function of GAM8358 is therefore inhibition of 5,10-methylenetetrahydrofolate reductase (nadph) (MTHFR, Accession NP_005948.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTHFR.

[60544] V-myb myeloblastosis viral oncogene homolog (avian)-like 2 (MYBL2, Accession NP_002457.1) is another GAM8358 target gene, herein designated TARGET GENE. MYBL2 BINDING SITE1 and MYBL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MYBL2, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYBL2 BINDING SITE1 and MYBL2 BINDING SITE2, designated SEQ ID:18152 and SEQ ID:6152 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60545] Another function of GAM8358 is therefore inhibition of V-myb myeloblastosis viral oncogene homolog (avian)-like 2 (MYBL2, Accession NP_002457.1), a gene which plays an essential role during cell cycle progression. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYBL2.

[60546] The function of MYBL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM215.1. Myosin binding protein c, slow type (MYBPC1, Accession NP_002456.1) is another GAM8358 target gene, herein designated TARGET GENE. MYBPC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYBPC1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYBPC1 BINDING SITE, designated SEQ ID:14764, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60547] Another function of GAM8358 is therefore inhibition of Myosin binding protein c, slow type (MYBPC1, Accession NP_002456.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYBPC1.

[60548] Myosin ib (MYO1B, Accession XP_290989.1) is another GAM8358 target gene, herein designated TARGET GENE. MYO1B BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MYO1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO1B BINDING SITE, designated SEQ ID:15695, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60549] Another function of GAM8358 is therefore inhibition of Myosin ib (MYO1B, Accession XP_290989.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with MYO1B.

[60550] N4BP2 (Accession NP_060647.2) is another GAM8358 target gene, herein designated TARGET GENE. N4BP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by N4BP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of N4BP2 BINDING SITE, designated SEQ ID:13301, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60551] Another function of GAM8358 is therefore inhibition of N4BP2 (Accession NP_060647.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP2.

[60552] N4BP3 (Accession XP_038920.2) is another GAM8358 target gene, herein designated TARGET GENE. N4BP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by N4BP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of N4BP3

BINDING SITE, designated SEQ ID:1115, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60553] Another function of GAM8358 is therefore inhibition of N4BP3 (Accession XP_038920.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP3.

[60554] Ngfi-a binding protein 1 (egr1 binding protein 1) (NAB1, Accession NP_005957.2) is another GAM8358 target gene, herein designated TARGET GENE. NAB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NAB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAB1 BINDING SITE, designated SEQ ID:3469, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60555] Another function of GAM8358 is therefore inhibition of Ngfi-a binding protein 1 (egr1 binding protein 1) (NAB1, Accession NP_005957.2), a gene which acts as a transcriptional repressor for zinc finger transcription factors egr1 and egr2 (by similarity). Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAB1.

[60556] The function of NAB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM499.1.NDFIP1 (Accession NP_085048.1) is another GAM8358 target gene, herein designated TARGET GENE. NDFIP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NDFIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDFIP1 BINDING SITE, designated SEQ ID:8122, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60557] Another function of GAM8358 is therefore inhibition of NDFIP1 (Accession NP_085048.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDFIP1.

[60558] NEBL (Accession NP_006384.1) is another GAM8358 target gene, herein designated TARGET GENE. NEBL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NEBL, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEBL BINDING SITE, designated SEQ ID:7080, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60559] Another function of GAM8358 is therefore inhibition of NEBL (Accession NP_006384.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEBL.

[60560] Neuropilin (nrp) and tolloid (tll)-like 2 (NETO2, Accession NP_060562.3) is another GAM8358 target gene, herein designated TARGET GENE. NETO2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NETO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NETO2 BINDING SITE, designated SEQ ID:2069, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60561] Another function of GAM8358 is therefore inhibition of Neuropilin (nrp) and tolloid (tll)-like 2 (NETO2, Accession

NP_060562.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NETO2.

[60562] NFASC (Accession XP_046808.8) is another GAM8358 target gene, herein designated TARGET GENE. NFASC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NFASC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFASC BINDING SITE, designated SEQ ID:521, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60563] Another function of GAM8358 is therefore inhibition of NFASC (Accession XP_046808.8) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFASC.

[60564] Ninjurin 1 (NINJ1, Accession NP_004139.1) is another GAM8358 target gene, herein designated TARGET GENE. NINJ1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NINJ1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of NINJ1 BINDING SITE, designated SEQ ID:16214, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60565] Another function of GAM8358 is therefore inhibition of Ninjurin 1 (NINJ1, Accession NP_004139.1), a gene which may play a role in nerve regeneration and in the formation and function of other tissues. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NINJ1.

[60566] The function of NINJ1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM558.1. Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2) is another GAM8358 target gene, herein designated TARGET GENE. NKTR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NKTR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKTR BINDING SITE, designated SEQ ID:8666, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[60567] Another function of GAM8358 is therefore inhibition of Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2), a gene which is involved in the function of nk cells. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NKTR.

[60568] The function of NKTR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM467.2. Nucleoredoxin (NXN, Accession NP_071908.1) is another GAM8358 target gene, herein designated TARGET GENE. NXN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NXN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NXN BINDING SITE, designated SEQ ID:18637, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60569] Another function of GAM8358 is therefore inhibition of Nucleoredoxin (NXN, Accession NP_071908.1). Accord-

ingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NXN.

[60570] Ornithine decarboxylase antizyme 3 (OAZ3, Accession NP_057262.1) is another GAM8358 target gene, herein designated TARGET GENE. OAZ3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by OAZ3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OAZ3 BINDING SITE, designated SEQ ID:7561, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60571] Another function of GAM8358 is therefore inhibition of Ornithine decarboxylase antizyme 3 (OAZ3, Accession NP_057262.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OAZ3.

[60572] Outer dense fiber of sperm tails 2 (ODF2, Accession NP_002531.3) is another GAM8358 target gene, herein designated TARGET GENE. ODF2 BINDING SITE is a target binding site found in the 5' untranslated region of multi-

ple transcripts of mRNA encoded by ODF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ODF2 BINDING SITE, designated SEQ ID:2038, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60573] Another function of GAM8358 is therefore inhibition of Outer dense fiber of sperm tails 2 (ODF2, Accession NP_002531.3), a gene which is very strongly similar to rat Odf2 . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ODF2.

[60574] The function of ODF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM515.2.Outer dense fiber of sperm tails 2 (ODF2, Accession NP_702915.1) is another GAM8358 target gene, herein designated TARGET GENE. ODF2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ODF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ODF2 BINDING SITE, designated SEQ ID:2038, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60575] Another function of GAM8358 is therefore inhibition of Outer dense fiber of sperm tails 2 (ODF2, Accession NP_702915.1), a gene which is very strongly similar to rat Odf2 . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ODF2.

[60576] The function of ODF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM515.2.OIP106 (Accession NP_055780.1) is another GAM8358 target gene, herein designated TARGET GENE. OIP106 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by OIP106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OIP106 BINDING SITE, designated SEQ ID:14387, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60577] Another function of GAM8358 is therefore inhibition of OIP106 (Accession NP_055780.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OIP106.

[60578] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_056375.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60579] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_056375.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60580] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570850.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60581] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570850.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60582] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570849.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[60583] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570849.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60584] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570844.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60585] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570844.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60586] Optic atrophy 1 (autosomal dominant) (OPA1, Accession

NP_570845.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60587] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570845.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60588] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570848.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1

BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60589] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570848.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60590] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570847.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60591] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570847.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with OPA1.

[60592] Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570846.1) is another GAM8358 target gene, herein designated TARGET GENE. OPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA1 BINDING SITE, designated SEQ ID:6097, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60593] Another function of GAM8358 is therefore inhibition of Optic atrophy 1 (autosomal dominant) (OPA1, Accession NP_570846.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA1.

[60594] OSCAR (Accession NP_573398.1) is another GAM8358 target gene, herein designated TARGET GENE. OSCAR BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by OSCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSCAR BINDING SITE, designated SEQ ID:18649, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60595] Another function of GAM8358 is therefore inhibition of OSCAR (Accession NP_573398.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSCAR.

[60596] OSCAR (Accession NP_570127.1) is another GAM8358 target gene, herein designated TARGET GENE. OSCAR BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by OSCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSCAR BINDING SITE, designated SEQ ID:18649, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60597] Another function of GAM8358 is therefore inhibition of OSCAR (Accession NP_570127.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with OSCAR.

[60598] OSCAR (Accession NP_573399.1) is another GAM8358 target gene, herein designated TARGET GENE. OSCAR BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by OSCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSCAR BINDING SITE, designated SEQ ID:18649, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60599] Another function of GAM8358 is therefore inhibition of OSCAR (Accession NP_573399.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSCAR.

[60600] OTOP3 (Accession XP_292588.2) is another GAM8358 target gene, herein designated TARGET GENE. OTOP3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by OTOP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTOP3

BINDING SITE, designated SEQ ID:13034, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60601] Another function of GAM8358 is therefore inhibition of OTOP3 (Accession XP_292588.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTOP3.

[60602] Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_002551.2) is another GAM8358 target gene, herein designated TARGET GENE. P2RX4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by P2RX4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX4 BINDING SITE, designated SEQ ID:5900, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60603] Another function of GAM8358 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_002551.2), a gene which acts as a ligand gated ion channel. Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RX4.

[60604] The function of P2RX4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM212.1. Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_780776.1) is another GAM8358 target gene, herein designated TARGET GENE. P2RX4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by P2RX4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX4 BINDING SITE, designated SEQ ID:5900, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60605] Another function of GAM8358 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_780776.1), a gene which acts as a ligand gated ion channel. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RX4.

[60606] The function of P2RX4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM212.1. Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_780777.1) is another GAM8358 target gene, herein designated TARGET GENE. P2RX4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by P2RX4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX4 BINDING SITE, designated SEQ ID:5900, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60607] Another function of GAM8358 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 4 (P2RX4, Accession NP_780777.1), a gene which acts as a ligand gated ion channel. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RX4.

[60608] The function of P2RX4 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM212.1.Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_004145.1) is another GAM8358 target gene, herein designated TARGET GENE. P2RY6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by P2RY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RY6 BINDING SITE, designated SEQ ID:985, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60609] Another function of GAM8358 is therefore inhibition of Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_004145.1), a gene which mediates cellular responses to nucleotides. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RY6.

[60610] The function of P2RY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_789768.1) is another

GAM8358 target gene, herein designated TARGET GENE. P2RY6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by P2RY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RY6 BINDING SITE, designated SEQ ID:985, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60611] Another function of GAM8358 is therefore inhibition of Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_789768.1), a gene which mediates cellular responses to nucleotides. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RY6.

[60612] The function of P2RY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_789766.1) is another GAM8358 target gene, herein designated TARGET GENE. P2RY6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA

encoded by P2RY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RY6 BINDING SITE, designated SEQ ID:985, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60613] Another function of GAM8358 is therefore inhibition of Pyrimidinergic receptor p2y, g-protein coupled, 6 (P2RY6, Accession NP_789766.1), a gene which mediates cellular responses to nucleotides. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RY6.

[60614] The function of P2RY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.P5-1 (Accession NP_006665.1) is another GAM8358 target gene, herein designated TARGET GENE. P5-1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by P5-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P5-1 BINDING SITE, designated SEQ ID:18467, to the nu-

cleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60615] Another function of GAM8358 is therefore inhibition of P5-1 (Accession NP_006665.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P5-1.

[60616] Peptidylglycine alpha-amidating monooxygenase (PAM, Accession NP_055872.1) is another GAM8358 target gene, herein designated TARGET GENE. PAM BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAM BINDING SITE, designated SEQ ID:8824, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60617] Another function of GAM8358 is therefore inhibition of Peptidylglycine alpha-amidating monooxygenase (PAM, Accession NP_055872.1), a gene which converts neuroendocrine peptides to active alpha- amidated products. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with PAM.

[60618] The function of PAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM322.1.PC326 (Accession NP_060912.1) is another GAM8358 target gene, herein designated TARGET GENE. PC326 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PC326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PC326 BINDING SITE, designated SEQ ID:13648, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60619] Another function of GAM8358 is therefore inhibition of PC326 (Accession NP_060912.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PC326.

[60620] Protocadherin 17 (PCDH17, Accession NP_055274.2) is another GAM8358 target gene, herein designated TARGET GENE. PCDH17 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PCDH17, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH17 BINDING SITE, designated SEQ ID:14897, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60621] Another function of GAM8358 is therefore inhibition of Protocadherin 17 (PCDH17, Accession NP_055274.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH17.

[60622] Pecanex homolog (drosophila) (PCNX, Accession NP_055797.1) is another GAM8358 target gene, herein designated TARGET GENE. PCNX BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PCNX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCNX BINDING SITE, designated SEQ ID:2623, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60623] Another function of GAM8358 is therefore inhibition of

Pecanex homolog (drosophila) (PCNX, Accession NP_055797.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCNX.

[60624] Procollagen c–endopeptidase enhancer (PCOLCE, Accession NP_002584.1) is another GAM8358 target gene, herein designated TARGET GENE. PCOLCE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PCOLCE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCOLCE BINDING SITE, designated SEQ ID:16049, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60625] Another function of GAM8358 is therefore inhibition of Procollagen c–endopeptidase enhancer (PCOLCE, Accession NP_002584.1), a gene which binds to the cooh– terminal propeptide of type i procollagen and enhances procollagen c– proteinase activity. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCOLCE.

[60626] The function of PCOLCE and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1. Phosphodiesterase 1b, calmodulin-dependent (PDE1B, Accession NP_000915.1) is another GAM8358 target gene, herein designated TARGET GENE. PDE1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDE1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE1B BINDING SITE, designated SEQ ID:11070, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60627] Another function of GAM8358 is therefore inhibition of Phosphodiesterase 1b, calmodulin-dependent (PDE1B, Accession NP_000915.1), a gene which is a Ca^{2+} -calmodulin dependent phosphodiesterase 1B with a preferred substrate of cGMP. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE1B.

[60628] The function of PDE1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM259.2. Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1) is another GAM8358 target gene, herein designated TARGET GENE. PDGFRB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDGFRB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDGFRB BINDING SITE, designated SEQ ID:1574, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60629] Another function of GAM8358 is therefore inhibition of Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1), a gene which Platelet-derived growth factor receptor beta chain; tyrosine kinase receptor. and therefore may be associated with Chronic myeloproliferative diseases. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Chronic myeloproliferative diseases, and of other diseases and clinical conditions associated with PDGFRB.

[60630] The function of PDGFRB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM579.1. Paternally expressed 10 (PEG10, Accession NP_055883.1) is another GAM8358 target gene, herein designated TARGET GENE. PEG10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PEG10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEG10 BINDING SITE, designated SEQ ID:15770, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60631] Another function of GAM8358 is therefore inhibition of Paternally expressed 10 (PEG10, Accession NP_055883.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEG10.

[60632] Pet112-like (yeast) (PET112L, Accession NP_004555.1) is another GAM8358 target gene, herein designated TARGET GENE. PET112L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PET112L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of PET112L BINDING SITE, designated SEQ ID:6659, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

- [60633] Another function of GAM8358 is therefore inhibition of Pet112-like (yeast) (PET112L, Accession NP_004555.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PET112L.
- [60634] Phd finger protein 1 (PHF1, Accession NP_002627.1) is another GAM8358 target gene, herein designated TARGET GENE. PHF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PHF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHF1 BINDING SITE, designated SEQ ID:13506, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.
- [60635] Another function of GAM8358 is therefore inhibition of Phd finger protein 1 (PHF1, Accession NP_002627.1) . Accordingly, utilities of GAM8358 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with PHF1.

[60636] PI4KII (Accession NP_060895.1) is another GAM8358 target gene, herein designated TARGET GENE. PI4KII BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PI4KII, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PI4KII BINDING SITE, designated SEQ ID:17573, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60637] Another function of GAM8358 is therefore inhibition of PI4KII (Accession NP_060895.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PI4KII.

[60638] PILRB (Accession NP_038468.3) is another GAM8358 target gene, herein designated TARGET GENE. PILRB BINDING SITE1 and PILRB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PILRB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of PILRB BINDING SITE1 and PILRB BINDING SITE2, designated SEQ ID:15545 and SEQ ID:5463 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60639] Another function of GAM8358 is therefore inhibition of PILRB (Accession NP_038468.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PILRB.

[60640] PILRB (Accession NP_778212.2) is another GAM8358 target gene, herein designated TARGET GENE. PILRB BINDING SITE1 and PILRB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PILRB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PILRB BINDING SITE1 and PILRB BINDING SITE2, designated SEQ ID:15545 and SEQ ID:5463 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60641] Another function of GAM8358 is therefore inhibition of PILRB (Accession NP_778212.2) . Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PILRB.

[60642] Pim-2 oncogene (PIM2, Accession NP_006866.1) is another GAM8358 target gene, herein designated TARGET GENE. PIM2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIM2 BINDING SITE, designated SEQ ID:584, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60643] Another function of GAM8358 is therefore inhibition of Pim-2 oncogene (PIM2, Accession NP_006866.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIM2.

[60644] PIP5K2C (Accession NP_079055.2) is another GAM8358 target gene, herein designated TARGET GENE. PIP5K2C BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PIP5K2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PIP5K2C BINDING SITE, designated SEQ ID:13606, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60645] Another function of GAM8358 is therefore inhibition of PIP5K2C (Accession NP_079055.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIP5K2C.

[60646] Pleiomorphic adenoma gene-like 1 (PLAGL1, Accession NP_006709.2) is another GAM8358 target gene, herein designated TARGET GENE. PLAGL1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PLAGL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLAGL1 BINDING SITE, designated SEQ ID:2458, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60647] Another function of GAM8358 is therefore inhibition of Pleiomorphic adenoma gene-like 1 (PLAGL1, Accession NP_006709.2), a gene which regulates apoptosis and cell

cycle arrest. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLAGL1.

[60648] The function of PLAGL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1. Promyelocytic leukemia (PML, Accession NP_150245.1) is another GAM8358 target gene, herein designated TARGET GENE. PML BINDING SITE1 and PML BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PML, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PML BINDING SITE1 and PML BINDING SITE2, designated SEQ ID:1247 and SEQ ID:1247 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60649] Another function of GAM8358 is therefore inhibition of Promyelocytic leukemia (PML, Accession NP_150245.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PML.

[60650] Promyelocytic leukemia (PML, Accession NP_150242.1) is another GAM8358 target gene, herein designated TARGET GENE. PML BINDING SITE1 and PML BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PML, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PML BINDING SITE1 and PML BINDING SITE2, designated SEQ ID:1247 and SEQ ID:1247 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60651] Another function of GAM8358 is therefore inhibition of Promyelocytic leukemia (PML, Accession NP_150242.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PML.

[60652] Promyelocytic leukemia (PML, Accession NP_150241.1) is another GAM8358 target gene, herein designated TARGET GENE. PML BINDING SITE1 and PML BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PML, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PML BINDING SITE1 and PML BINDING SITE2, designated SEQ ID:2434 and SEQ ID:1247 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60653] Another function of GAM8358 is therefore inhibition of Promyelocytic leukemia (PML, Accession NP_150241.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PML.

[60654] Promyelocytic leukemia (PML, Accession NP_150253.1) is another GAM8358 target gene, herein designated TARGET GENE. PML BINDING SITE1 and PML BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PML, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PML BINDING SITE1 and PML BINDING SITE2, designated SEQ ID:1247 and SEQ ID:13657 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60655] Another function of GAM8358 is therefore inhibition of Promyelocytic leukemia (PML, Accession NP_150253.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PML.

[60656] Polymerase (dna directed), theta (POLQ, Accession NP_006587.2) is another GAM8358 target gene, herein designated TARGET GENE. POLQ BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by POLQ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLQ BINDING SITE, designated SEQ ID:2177, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60657] Another function of GAM8358 is therefore inhibition of Polymerase (dna directed), theta (POLQ, Accession NP_006587.2), a gene which enhances untargeted mutagenesis. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLQ.

[60658] The function of POLQ and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1609.1. POLR3D (Accession NP_001713.1) is another GAM8358 target gene, herein designated TARGET GENE. POLR3D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by POLR3D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR3D BINDING SITE, designated SEQ ID:5565, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60659] Another function of GAM8358 is therefore inhibition of POLR3D (Accession NP_001713.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR3D.

[60660] Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_680480.1) is another GAM8358 target gene, herein designated TARGET GENE. PPIL2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPIL2, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL2 BINDING SITE, designated SEQ ID:13963, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60661] Another function of GAM8358 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_680480.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL2.

[60662] Protein phosphatase 1e (pp2c domain containing) (PPM1E, Accession NP_055721.3) is another GAM8358 target gene, herein designated TARGET GENE. PPM1E BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPM1E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPM1E BINDING SITE, designated SEQ ID:5899, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60663] Another function of GAM8358 is therefore inhibition of

Protein phosphatase 1e (pp2c domain containing) (PPM1E, Accession NP_055721.3) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPM1E.

[60664] Protein phosphatase 1, regulatory subunit 3d (PPP1R3D, Accession NP_006233.1) is another GAM8358 target gene, herein designated TARGET GENE. PPP1R3D BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PPP1R3D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R3D BINDING SITE, designated SEQ ID:5493, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60665] Another function of GAM8358 is therefore inhibition of Protein phosphatase 1, regulatory subunit 3d (PPP1R3D, Accession NP_006233.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R3D.

[60666] Protein phosphatase 3 (formerly 2b), regulatory subunit b, 19kda, alpha isoform (calcineurin b, type i) (PPP3R1, Accession NP_000936.1) is another GAM8358 target gene,

herein designated TARGET GENE. PPP3R1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPP3R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP3R1 BINDING SITE, designated SEQ ID:3148, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60667] Another function of GAM8358 is therefore inhibition of Protein phosphatase 3 (formerly 2b), regulatory subunit b, 19kda, alpha isoform (calcineurin b, type i) (PPP3R1, Accession NP_000936.1), a gene which is a regulatory subunit of calcineurin, a calcium-dependent, calmodulin stimulated protein phosphatase 3. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP3R1.

[60668] The function of PPP3R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM369.1. Papillary renal cell carcinoma (translocation-associated) (PRCC, Accession NP_005964.2) is another GAM8358 target gene, herein designated TAR-

GET GENE. PRCC BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PRCC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRCC BINDING SITE, designated SEQ ID:9455, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60669] Another function of GAM8358 is therefore inhibition of Papillary renal cell carcinoma (translocation-associated) (PRCC, Accession NP_005964.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRCC.

[60670] Pr domain containing 7 (PRDM7, Accession NP_443722.1) is another GAM8358 target gene, herein designated TARGET GENE. PRDM7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRDM7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRDM7 BINDING SITE, designated SEQ ID:4427, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ

ID:255.

[60671] Another function of GAM8358 is therefore inhibition of Pr domain containing 7 (PRDM7, Accession NP_443722.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRDM7.

[60672] Pr domain containing 9 (PRDM9, Accession NP_064612.1) is another GAM8358 target gene, herein designated TARGET GENE. PRDM9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRDM9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRDM9 BINDING SITE, designated SEQ ID:4427, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60673] Another function of GAM8358 is therefore inhibition of Pr domain containing 9 (PRDM9, Accession NP_064612.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRDM9.

[60674] Protein-kinase, interferon-inducible double stranded rna

dependent inhibitor, repressor of (p58 repressor) (PRKRIR, Accession NP_004696.2) is another GAM8358 target gene, herein designated TARGET GENE. PRKRIR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRKRIR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKRIR BINDING SITE, designated SEQ ID:2605, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60675] Another function of GAM8358 is therefore inhibition of Protein-kinase, interferon-inducible double stranded rna dependent inhibitor, repressor of (p58 repressor) (PRKRIR, Accession NP_004696.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKRIR.

[60676] PRO0461 (Accession NP_112558.1) is another GAM8358 target gene, herein designated TARGET GENE. PRO0461 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PRO0461, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PRO0461 BINDING SITE, designated SEQ ID:7800, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60677] Another function of GAM8358 is therefore inhibition of PRO0461 (Accession NP_112558.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0461.

[60678] PRO0650 (Accession NP_054856.1) is another GAM8358 target gene, herein designated TARGET GENE. PRO0650 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PRO0650, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0650 BINDING SITE, designated SEQ ID:12955, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60679] Another function of GAM8358 is therefore inhibition of PRO0650 (Accession NP_054856.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

PRO0650.

[60680] Proteasome (prosome, macropain) subunit, alpha type, 5 (PSMA5, Accession NP_002781.2) is another GAM8358 target gene, herein designated TARGET GENE. PSMA5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PSMA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMA5 BINDING SITE, designated SEQ ID:11290, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60681] Another function of GAM8358 is therefore inhibition of Proteasome (prosome, macropain) subunit, alpha type, 5 (PSMA5, Accession NP_002781.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMA5.

[60682] Phosphatidylserine synthase 2 (PTDSS2, Accession NP_110410.1) is another GAM8358 target gene, herein designated TARGET GENE. PTDSS2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTDSS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTDSS2 BINDING SITE, designated SEQ ID:14935, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60683] Another function of GAM8358 is therefore inhibition of Phosphatidylserine synthase 2 (PTDSS2, Accession NP_110410.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTDSS2.

[60684] Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM8358 target gene, herein designated TARGET GENE. PTGIS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGIS BINDING SITE, designated SEQ ID:3522, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60685] Another function of GAM8358 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession

NP_000952.1), a gene which catalyzes the isomerization of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGIS.

[60686] The function of PTGIS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Phosphorylase, glycogen; muscle (mc ardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) is another GAM8358 target gene, herein designated TARGET GENE. PYGM BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PYGM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYGM BINDING SITE, designated SEQ ID:6017, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60687] Another function of GAM8358 is therefore inhibition of Phosphorylase, glycogen; muscle (mc ardle syndrome, glycogen storage disease type v) (PYGM, Accession

NP_005600.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYGM.

[60688] RAB2B (Accession NP_116235.2) is another GAM8358 target gene, herein designated TARGET GENE. RAB2B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB2B BINDING SITE, designated SEQ ID:19612, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60689] Another function of GAM8358 is therefore inhibition of RAB2B (Accession NP_116235.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB2B.

[60690] Rab36, member ras oncogene family (RAB36, Accession NP_004905.1) is another GAM8358 target gene, herein designated TARGET GENE. RAB36 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB36, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB36 BINDING SITE, designated SEQ ID:8203, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60691] Another function of GAM8358 is therefore inhibition of Rab36, member ras oncogene family (RAB36, Accession NP_004905.1), a gene which is involved in protein transport. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB36.

[60692] The function of RAB36 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Rae1 rna export 1 homolog (s. pombe) (RAE1, Accession NP_003601.1) is another GAM8358 target gene, herein designated TARGET GENE. RAE1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAE1 BINDING SITE, designated SEQ ID:12024, to the nucleotide se-

quence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60693] Another function of GAM8358 is therefore inhibition of Rae1 rna export 1 homolog (s. pombe) (RAE1, Accession NP_003601.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAE1.

[60694] Recombination activating gene 2 (RAG2, Accession NP_000527.1) is another GAM8358 target gene, herein designated TARGET GENE. RAG2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAG2 BINDING SITE, designated SEQ ID:15119, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60695] Another function of GAM8358 is therefore inhibition of Recombination activating gene 2 (RAG2, Accession NP_000527.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAG2.

[60696] RALGPS1A (Accession NP_055451.1) is another GAM8358 target gene, herein designated TARGET GENE. RALGPS1A BINDING SITE1 and RALGPS1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RALGPS1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RALGPS1A BINDING SITE1 and RALGPS1A BINDING SITE2, designated SEQ ID:12537 and SEQ ID:3361 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60697] Another function of GAM8358 is therefore inhibition of RALGPS1A (Accession NP_055451.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RALGPS1A.

[60698] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) is another GAM8358 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:11773, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60699] Another function of GAM8358 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[60700] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) is another GAM8358 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:11773, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60701] Another function of GAM8358 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2,

Accession NP_739580.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[60702] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) is another GAM8358 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:11773, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60703] Another function of GAM8358 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[60704] Rna binding motif protein 7 (RBM7, Accession NP_057174.1) is another GAM8358 target gene, herein designated TARGET GENE. RBM7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by RBM7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBM7 BINDING SITE, designated SEQ ID:8778, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60705] Another function of GAM8358 is therefore inhibition of Rna binding motif protein 7 (RBM7, Accession NP_057174.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBM7.

[60706] Retinol dehydrogenase 5 (11-cis and 9-cis) (RDH5, Accession NP_002896.1) is another GAM8358 target gene, herein designated TARGET GENE. RDH5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RDH5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDH5 BINDING SITE, designated SEQ ID:5992, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60707] Another function of GAM8358 is therefore inhibition of Retinol dehydrogenase 5 (11-cis and 9-cis) (RDH5, Accession NP_002896.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDH5.

[60708] Regulator of g-protein signalling 11 (RGS11, Accession NP_003825.1) is another GAM8358 target gene, herein designated TARGET GENE. RGS11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RGS11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS11 BINDING SITE, designated SEQ ID:11687, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60709] Another function of GAM8358 is therefore inhibition of Regulator of g-protein signalling 11 (RGS11, Accession NP_003825.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS11.

[60710] Ring finger protein 1 (RING1, Accession NP_002922.1) is another GAM8358 target gene, herein designated TARGET

GENE. RING1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RING1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RING1 BINDING SITE, designated SEQ ID:14960, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60711] Another function of GAM8358 is therefore inhibition of Ring finger protein 1 (RING1, Accession NP_002922.1), a gene which involves in transcriptional regulation. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RING1.

[60712] The function of RING1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Receptor (tnfrsf)-interacting serine-threonine kinase 1 (RIPK1, Accession NP_003795.1) is another GAM8358 target gene, herein designated TARGET GENE. RIPK1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RIPK1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIPK1 BINDING SITE, designated SEQ ID:13476, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60713] Another function of GAM8358 is therefore inhibition of Receptor (tnfrsf)-interacting serine-threonine kinase 1 (RIPK1, Accession NP_003795.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIPK1.

[60714] Ribonuclease, rnaase a family, 1 (pancreatic) (RNASE1, Accession NP_002924.1) is another GAM8358 target gene, herein designated TARGET GENE. RNASE1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNASE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNASE1 BINDING SITE, designated SEQ ID:1512, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60715] Another function of GAM8358 is therefore inhibition of Ribonuclease, rnaase a family, 1 (pancreatic) (RNASE1, Ac-

cession NP_002924.1), a gene which is a Pancreatic ribonuclease; a pyrimidine-specific endonuclease that generates 2',3'- cyclic phosphate products. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNASE1.

[60716] The function of RNASE1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM483.1. Ring finger protein 38 (RNF38, Accession NP_073618.2) is another GAM8358 target gene, herein designated TARGET GENE. RNF38 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNF38, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF38 BINDING SITE, designated SEQ ID:2759, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60717] Another function of GAM8358 is therefore inhibition of Ring finger protein 38 (RNF38, Accession NP_073618.2). Accordingly, utilities of GAM8358 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with RNF38.

[60718] RNPC4 (Accession NP_060577.2) is another GAM8358 target gene, herein designated TARGET GENE. RNPC4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RNPC4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNPC4 BINDING SITE, designated SEQ ID:18636, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60719] Another function of GAM8358 is therefore inhibition of RNPC4 (Accession NP_060577.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNPC4.

[60720] RODH (Accession NP_003716.2) is another GAM8358 target gene, herein designated TARGET GENE. RODH BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RODH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RODH BIND-

ING SITE, designated SEQ ID:19289, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60721] Another function of GAM8358 is therefore inhibition of RODH (Accession NP_003716.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RODH.

[60722] RP4-622L5 (Accession NP_061991.2) is another GAM8358 target gene, herein designated TARGET GENE. RP4-622L5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RP4-622L5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP4-622L5 BINDING SITE, designated SEQ ID:17249, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60723] Another function of GAM8358 is therefore inhibition of RP4-622L5 (Accession NP_061991.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP4-622L5.

[60724] S100A15 (Accession NP_789793.1) is another GAM8358

target gene, herein designated TARGET GENE. S100A15 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by S100A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S100A15 BINDING SITE, designated SEQ ID:13112, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60725] Another function of GAM8358 is therefore inhibition of S100A15 (Accession NP_789793.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with S100A15.

[60726] SARM1 (Accession NP_055892.1) is another GAM8358 target gene, herein designated TARGET GENE. SARM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SARM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SARM1 BINDING SITE, designated SEQ ID:7757, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[60727] Another function of GAM8358 is therefore inhibition of SARM1 (Accession NP_055892.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM1.

[60728] SBZF3 (Accession XP_300732.1) is another GAM8358 target gene, herein designated TARGET GENE. SBZF3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SBZF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBZF3 BINDING SITE, designated SEQ ID:9443, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60729] Another function of GAM8358 is therefore inhibition of SBZF3 (Accession XP_300732.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBZF3.

[60730] Sec14-like 1 (*s. cerevisiae*) (SEC14L1, Accession NP_002994.1) is another GAM8358 target gene, herein designated TARGET GENE. SEC14L1 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SEC14L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC14L1 BINDING SITE, designated SEQ ID:13770, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60731] Another function of GAM8358 is therefore inhibition of Sec14-like 1 (*s. cerevisiae*) (SEC14L1, Accession NP_002994.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC14L1.

[60732] Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 6 (SERPINB6, Accession NP_004559.3) is another GAM8358 target gene, herein designated TARGET GENE. SERPINB6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SERPINB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB6 BINDING SITE, designated SEQ ID:11491, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA,

also designated SEQ ID:255.

[60733] Another function of GAM8358 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 6 (SERPINB6, Accession NP_004559.3), a gene which inhibits thrombin. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB6.

[60734] The function of SERPINB6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM830.1. Sh3 domain binding glutamic acid-rich protein like (SH3BGRL, Accession NP_003013.1) is another GAM8358 target gene, herein designated TARGET GENE. SH3BGRL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH3BGRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BGRL BINDING SITE, designated SEQ ID:16703, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60735] Another function of GAM8358 is therefore inhibition of

Sh3 domain binding glutamic acid-rich protein like (SH3BGRL, Accession NP_003013.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BGRL.

[60736] Sh3-domain kinase binding protein 1 (SH3KBP1, Accession NP_114098.1) is another GAM8358 target gene, herein designated TARGET GENE. SH3KBP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH3KBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3KBP1 BINDING SITE, designated SEQ ID:15834, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60737] Another function of GAM8358 is therefore inhibition of Sh3-domain kinase binding protein 1 (SH3KBP1, Accession NP_114098.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3KBP1.

[60738] Solute carrier family 25 (mitochondrial carrier; dicarboxylate transporter), member 10 (SLC25A10, Accession

NP_036272.2) is another GAM8358 target gene, herein designated TARGET GENE. SLC25A10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC25A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC25A10 BINDING SITE, designated SEQ ID:6324, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60739] Another function of GAM8358 is therefore inhibition of Solute carrier family 25 (mitochondrial carrier; dicarboxylate transporter), member 10 (SLC25A10, Accession NP_036272.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC25A10.

[60740] Solute carrier family 25 (mitochondrial carrier; ornithine transporter) member 15 (SLC25A15, Accession NP_055067.1) is another GAM8358 target gene, herein designated TARGET GENE. SLC25A15 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC25A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC25A15 BINDING SITE, designated SEQ ID:14932, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60741] Another function of GAM8358 is therefore inhibition of Solute carrier family 25 (mitochondrial carrier; ornithine transporter) member 15 (SLC25A15, Accession NP_055067.1), a gene which participates the ornithine transport across inner mitochondrial membrane, from the cytoplasm to the matrix and therefore is associated with Hyperornithinemia– hyperammonemia– homocitrullinuria syndrome (hhh syndrome). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Hyperornithinemia– hyperammonemia– homocitrullinuria syndrome (hhh syndrome), and of other diseases and clinical conditions associated with SLC25A15.

[60742] The function of SLC25A15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1. Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) is another GAM8358 target gene, herein designated TARGET GENE.

SLC39A3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC39A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A3 BINDING SITE, designated SEQ ID:11947, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60743] Another function of GAM8358 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC39A3.

[60744] Solute carrier family 6 (neurotransmitter transporter, creatine), member 8 (SLC6A8, Accession NP_005620.1) is another GAM8358 target gene, herein designated TARGET GENE. SLC6A8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC6A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A8 BINDING SITE, designated

SEQ ID:17130, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60745] Another function of GAM8358 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, creatine), member 8 (SLC6A8, Accession NP_005620.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A8.

[60746] Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily d, member 2 (SMARCD2, Accession NP_003068.2) is another GAM8358 target gene, herein designated TARGET GENE. SMARCD2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SMARCD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCD2 BINDING SITE, designated SEQ ID:7747, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60747] Another function of GAM8358 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regu-

lator of chromatin, subfamily d, member 2 (SMARCD2, Accession NP_003068.2), a gene which is involved in chromatin remodeling. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCD2.

[60748] The function of SMARCD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM537.1. Smith-magenis syndrome chromosome region, candidate 7 (SMCR7, Accession NP_631901.2) is another GAM8358 target gene, herein designated TARGET GENE. SMCR7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SMCR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMCR7 BINDING SITE, designated SEQ ID:6215, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60749] Another function of GAM8358 is therefore inhibition of Smith-magenis syndrome chromosome region, candidate 7 (SMCR7, Accession NP_631901.2). Accordingly, utilities

of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMCR7.

[60750] Smith–magenis syndrome chromosome region, candidate 7 (SMCR7, Accession NP_683684.1) is another GAM8358 target gene, herein designated TARGET GENE. SMCR7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SMCR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMCR7 BINDING SITE, designated SEQ ID:6215, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60751] Another function of GAM8358 is therefore inhibition of Smith–magenis syndrome chromosome region, candidate 7 (SMCR7, Accession NP_683684.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMCR7.

[60752] SMP3 (Accession NP_079439.2) is another GAM8358 target gene, herein designated TARGET GENE. SMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMP3, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMP3 BINDING SITE, designated SEQ ID:2105, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60753] Another function of GAM8358 is therefore inhibition of SMP3 (Accession NP_079439.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMP3.

[60754] Sry (sex determining region y)-box 12 (SOX12, Accession NP_008874.2) is another GAM8358 target gene, herein designated TARGET GENE. SOX12 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SOX12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOX12 BINDING SITE, designated SEQ ID:2490, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60755] Another function of GAM8358 is therefore inhibition of Sry (sex determining region y)-box 12 (SOX12, Accession

NP_008874.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX12.

[60756] Sp3 transcription factor (SP3, Accession XP_092672.2) is another GAM8358 target gene, herein designated TARGET GENE. SP3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SP3 BINDING SITE, designated SEQ ID:18359, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60757] Another function of GAM8358 is therefore inhibition of Sp3 transcription factor (SP3, Accession XP_092672.2), a gene which binds to gt and gc boxes promoters elements. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SP3.

[60758] The function of SP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Sialophorin (gp115, leukosialin, cd43) (SPN,

Accession NP_003114.1) is another GAM8358 target gene, herein designated TARGET GENE. SPN BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPN BINDING SITE, designated SEQ ID:15664, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60759] Another function of GAM8358 is therefore inhibition of Sialophorin (gpl115, leukosialin, cd43) (SPN, Accession NP_003114.1), a gene which plays a role in the physico-chemical properties of the t- cell surface and in lectin binding. presents carbohydrate ligands to selectins. . and therefore may be associated with Wiskott- aldrich syndrome. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Wiskott- aldrich syndrome, and of other diseases and clinical conditions associated with SPN.

[60760] The function of SPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM130.1.Spectrin, beta, non-erythrocytic 4 (SPTBN4, Accession NP_079489.1) is another GAM8358 target gene, herein designated TARGET GENE. SPTBN4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SPTBN4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPTBN4 BINDING SITE, designated SEQ ID:14455, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60761] Another function of GAM8358 is therefore inhibition of Spectrin, beta, non-erythrocytic 4 (SPTBN4, Accession NP_079489.1), a gene which is critical for the maintenance of plasma membrane shape and lipid asymmetry. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPTBN4.

[60762] The function of SPTBN4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Sulfotransferase family, cytosolic, 1c, member 2 (SULT1C2, Accession NP_006579.2) is another

GAM8358 target gene, herein designated TARGET GENE. SULT1C2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SULT1C2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SULT1C2 BINDING SITE, designated SEQ ID:17465, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60763] Another function of GAM8358 is therefore inhibition of Sulfotransferase family, cytosolic, 1c, member 2 (SULT1C2, Accession NP_006579.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SULT1C2.

[60764] Synapsin iii (SYN3, Accession NP_598344.1) is another GAM8358 target gene, herein designated TARGET GENE. SYN3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SYN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYN3 BINDING SITE, designated

SEQ ID:2991, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60765] Another function of GAM8358 is therefore inhibition of Synapsin iii (SYN3, Accession NP_598344.1), a gene which may be involved in the regulation of neurotransmitter release and synaptogenesis. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYN3.

[60766] The function of SYN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1089.2. Synapsin iii (SYN3, Accession NP_003481.2) is another GAM8358 target gene, herein designated TARGET GENE. SYN3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SYN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYN3 BINDING SITE, designated SEQ ID:2991, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60767] Another function of GAM8358 is therefore inhibition of Synapsin iii (SYN3, Accession NP_003481.2), a gene which may be involved in the regulation of neurotransmitter release and synaptogenesis. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYN3.

[60768] The function of SYN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1089.2. Synapsin iii (SYN3, Accession NP_598343.1) is another GAM8358 target gene, herein designated TARGET GENE. SYN3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SYN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYN3 BINDING SITE, designated SEQ ID:2991, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60769] Another function of GAM8358 is therefore inhibition of Synapsin iii (SYN3, Accession NP_598343.1), a gene which may be involved in the regulation of neurotransmitter re-

lease and synaptogenesis. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYN3.

[60770] The function of SYN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1089.2.Tar (hiv) rna binding protein 2 (TARBP2, Accession NP_599151.1) is another GAM8358 target gene, herein designated TARGET GENE. TARBP2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TARBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TARBP2 BINDING SITE, designated SEQ ID:15955, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60771] Another function of GAM8358 is therefore inhibition of Tar (hiv) rna binding protein 2 (TARBP2, Accession NP_599151.1), a gene which is involved in the regulation of HIV replication. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TARBP2.

[60772] The function of TARBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM309.1. Tar (hiv) rna binding protein 2 (TARBP2, Accession NP_599150.1) is another GAM8358 target gene, herein designated TARGET GENE. TARBP2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TARBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TARBP2 BINDING SITE, designated SEQ ID:15955, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60773] Another function of GAM8358 is therefore inhibition of Tar (hiv) rna binding protein 2 (TARBP2, Accession NP_599150.1), a gene which is involved in the regulation of HIV replication. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TARBP2.

[60774] The function of TARBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM309.1.Transducin (beta)-like 2 (TBL2, Accession NP_116783.1) is another GAM8358 target gene, herein designated TARGET GENE. TBL2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TBL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBL2 BINDING SITE, designated SEQ ID:4498, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60775] Another function of GAM8358 is therefore inhibition of Transducin (beta)-like 2 (TBL2, Accession NP_116783.1), a gene which is of unknown function. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBL2.

[60776] The function of TBL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM467.2.Transcription factor 6-like 1 (mitochondrial transcription factor 1-like) (TCF6L1, Accession NP_003192.1) is another GAM8358 target gene, herein designated TARGET GENE. TCF6L1 BINDING SITE is a tar-

get binding site found in the 5` untranslated region of mRNA encoded by TCF6L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCF6L1 BINDING SITE, designated SEQ ID:4205, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60777] Another function of GAM8358 is therefore inhibition of Transcription factor 6-like 1 (mitochondrial transcription factor 1-like) (TCF6L1, Accession NP_003192.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCF6L1.

[60778] Treacher collins-franceschetti syndrome 1 (TCOF1, Accession NP_000347.1) is another GAM8358 target gene, herein designated TARGET GENE. TCOF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TCOF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCOF1 BINDING SITE, designated SEQ ID:12390, to the nucleotide se-

quence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60779] Another function of GAM8358 is therefore inhibition of Treacher collins-franceschetti syndrome 1 (TCOF1, Accession NP_000347.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCOF1.

[60780] Tgfb1-induced anti-apoptotic factor 1 (TIAF1, Accession NP_510880.2) is another GAM8358 target gene, herein designated TARGET GENE. TIAF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TIAF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIAF1 BINDING SITE, designated SEQ ID:16620, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60781] Another function of GAM8358 is therefore inhibition of Tgfb1-induced anti-apoptotic factor 1 (TIAF1, Accession NP_510880.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIAF1.

[60782] Tgfb1-induced anti-apoptotic factor 1 (TIAF1, Accession NP_004731.2) is another GAM8358 target gene, herein designated TARGET GENE. TIAF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TIAF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIAF1 BINDING SITE, designated SEQ ID:16620, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60783] Another function of GAM8358 is therefore inhibition of Tgfb1-induced anti-apoptotic factor 1 (TIAF1, Accession NP_004731.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIAF1.

[60784] Thyroid transcription factor 1 (TITF1, Accession NP_003308.1) is another GAM8358 target gene, herein designated TARGET GENE. TITF1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TITF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of TITF1 BINDING SITE, designated SEQ ID:11075, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60785] Another function of GAM8358 is therefore inhibition of Thyroid transcription factor 1 (TITF1, Accession NP_003308.1), a gene which plays a role in thyroid and lung development; and surfactant homeostasis and therefore may be associated with Thyroglobulin defect. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Thyroglobulin defect, and of other diseases and clinical conditions associated with TITF1.

[60786] The function of TITF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.2. Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1) is another GAM8358 target gene, herein designated TARGET GENE. TK2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TK2 BINDING SITE, design-

nated SEQ ID:9571, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60787] Another function of GAM8358 is therefore inhibition of Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1), a gene which phosphorylates thymidine, deoxycytidine, deoxyuridine, and also anti-viral and anti-cancer nucleoside analogs and therefore may be associated with Mitochondrial dna depletion myopathy. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Mitochondrial dna depletion myopathy, and of other diseases and clinical conditions associated with TK2.

[60788] The function of TK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.1. Talin 1 (TLN1, Accession NP_006280.2) is another GAM8358 target gene, herein designated TARGET GENE. TLN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TLN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of TLN1 BINDING SITE, designated SEQ ID:2014, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60789] Another function of GAM8358 is therefore inhibition of Talin 1 (TLN1, Accession NP_006280.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLN1.

[60790] Trinucleotide repeat containing 4 (TNRC4, Accession NP_009116.2) is another GAM8358 target gene, herein designated TARGET GENE. TNRC4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNRC4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNRC4 BINDING SITE, designated SEQ ID:3329, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60791] Another function of GAM8358 is therefore inhibition of Trinucleotide repeat containing 4 (TNRC4, Accession NP_009116.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TNRC4.

[60792] TP53I5 (Accession XP_290532.2) is another GAM8358 target gene, herein designated TARGET GENE. TP53I5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TP53I5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53I5 BINDING SITE, designated SEQ ID:19129, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60793] Another function of GAM8358 is therefore inhibition of TP53I5 (Accession XP_290532.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53I5.

[60794] Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1) is another GAM8358 target gene, herein designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

TRAF5 BINDING SITE, designated SEQ ID:12305, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60795] Another function of GAM8358 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[60796] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2. Tnf receptor-associated factor 5 (TRAF5, Accession NP_665702.1) is another GAM8358 target gene, herein designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF5 BINDING SITE, designated SEQ ID:12305, to the nucleotide sequence of GAM8358 RNA, herein designated

GAM RNA, also designated SEQ ID:255.

[60797] Another function of GAM8358 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession NP_665702.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[60798] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2. TRAM2 (Accession NP_036420.1) is another GAM8358 target gene, herein designated TARGET GENE. TRAM2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRAM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAM2 BINDING SITE, designated SEQ ID:5325, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60799] Another function of GAM8358 is therefore inhibition of TRAM2 (Accession NP_036420.1) . Accordingly, utilities of

GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAM2.

[60800] Tripartite motif-containing 29 (TRIM29, Accession NP_036233.2) is another GAM8358 target gene, herein designated TARGET GENE. TRIM29 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRIM29, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM29 BINDING SITE, designated SEQ ID:673, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60801] Another function of GAM8358 is therefore inhibition of Tripartite motif-containing 29 (TRIM29, Accession NP_036233.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM29.

[60802] TRIM47 (Accession XP_290731.1) is another GAM8358 target gene, herein designated TARGET GENE. TRIM47 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIM47, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM47 BINDING SITE, designated SEQ ID:3214, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60803] Another function of GAM8358 is therefore inhibition of TRIM47 (Accession XP_290731.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM47.

[60804] Ubiquitin-conjugating enzyme e2q (putative) (UBE2Q, Accession NP_060052.3) is another GAM8358 target gene, herein designated TARGET GENE. UBE2Q BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UBE2Q, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2Q BINDING SITE, designated SEQ ID:13750, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60805] Another function of GAM8358 is therefore inhibition of Ubiquitin-conjugating enzyme e2q (putative) (UBE2Q, Accession NP_060052.3) . Accordingly, utilities of GAM8358

include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2Q.

[60806] Usher syndrome 1g (autosomal recessive) (USH1G, Accession NP_775748.1) is another GAM8358 target gene, herein designated TARGET GENE. USH1G BINDING SITE1 and USH1G BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by USH1G, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USH1G BINDING SITE1 and USH1G BINDING SITE2, designated SEQ ID:12873 and SEQ ID:4086 respectively, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60807] Another function of GAM8358 is therefore inhibition of Usher syndrome 1g (autosomal recessive) (USH1G, Accession NP_775748.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USH1G.

[60808] Vang-like 2 (van gogh, drosophila) (VANGL2, Accession XP_049695.4) is another GAM8358 target gene, herein designated TARGET GENE. VANGL2 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by VANGL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VANGL2 BINDING SITE, designated SEQ ID:17930, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60809] Another function of GAM8358 is therefore inhibition of Vang-like 2 (van gogh, drosophila) (VANGL2, Accession XP_049695.4), a gene which may take part in defining the lateral boundary of floorplate differentiation and therefore may be associated with Neural tube defects. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of Neural tube defects, and of other diseases and clinical conditions associated with VANGL2.

[60810] The function of VANGL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Vesicle amine transport protein 1 homolog (t californica) (VAT1, Accession NP_006364.2) is another GAM8358 target gene, herein designated TARGET GENE. VAT1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VAT1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VAT1 BINDING SITE, designated SEQ ID:7020, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60811] Another function of GAM8358 is therefore inhibition of Vesicle amine transport protein 1 homolog (t californica) (VAT1, Accession NP_006364.2), a gene which is a membrane protein of cholinergic synaptic vesicles. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VAT1.

[60812] The function of VAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM330.2. Von willebrand factor (VWF, Accession NP_000543.1) is another GAM8358 target gene, herein designated TARGET GENE. VWF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VWF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of VWF BINDING SITE, designated SEQ ID:13033, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60813] Another function of GAM8358 is therefore inhibition of Von willebrand factor (VWF, Accession NP_000543.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VWF.

[60814] WDR22 (Accession XP_031102.1) is another GAM8358 target gene, herein designated TARGET GENE. WDR22 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WDR22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR22 BINDING SITE, designated SEQ ID:16841, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60815] Another function of GAM8358 is therefore inhibition of WDR22 (Accession XP_031102.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR22.

[60816] Wd repeat domain 7 (WDR7, Accession NP_056100.1) is another GAM8358 target gene, herein designated TARGET GENE. WDR7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR7 BINDING SITE, designated SEQ ID:570, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60817] Another function of GAM8358 is therefore inhibition of Wd repeat domain 7 (WDR7, Accession NP_056100.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR7.

[60818] Wd repeat domain 7 (WDR7, Accession NP_443066.1) is another GAM8358 target gene, herein designated TARGET GENE. WDR7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity

ity of the nucleotide sequences of WDR7 BINDING SITE, designated SEQ ID:570, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60819] Another function of GAM8358 is therefore inhibition of Wd repeat domain 7 (WDR7, Accession NP_443066.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR7.

[60820] Wd repeat domain 9 (WDR9, Accession NP_061836.2) is another GAM8358 target gene, herein designated TARGET GENE. WDR9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDR9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR9 BINDING SITE, designated SEQ ID:15650, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60821] Another function of GAM8358 is therefore inhibition of Wd repeat domain 9 (WDR9, Accession NP_061836.2) . Accordingly, utilities of GAM8358 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with WDR9.

[60822] Wolfram syndrome 1 (wolframin) (WFS1, Accession NP_005996.1) is another GAM8358 target gene, herein designated TARGET GENE. WFS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WFS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WFS1 BINDING SITE, designated SEQ ID:6581, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60823] Another function of GAM8358 is therefore inhibition of Wolfram syndrome 1 (wolframin) (WFS1, Accession NP_005996.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WFS1.

[60824] Winged-helix nude (WHN, Accession NP_003584.2) is another GAM8358 target gene, herein designated TARGET GENE. WHN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WHN, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHN BINDING SITE, designated SEQ ID:18123, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60825] Another function of GAM8358 is therefore inhibition of Winged-helix nude (WHN, Accession NP_003584.2), a gene which plays a role in transcriptional regulation and therefore may be associated with T- cell immunodeficiency, the skin disorder congenital alopecia, and nail dystrophy. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of T- cell immunodeficiency, the skin disorder congenital alopecia, and nail dystrophy., and of other diseases and clinical conditions associated with WHN.

[60826] The function of WHN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Wolf-hirschhorn syndrome candidate 1-like 1 (WHSC1L1, Accession NP_060248.2) is another GAM8358 target gene, herein designated TARGET GENE. WHSC1L1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded

by WHSC1L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1L1 BINDING SITE, designated SEQ ID:1808, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60827] Another function of GAM8358 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1-like 1 (WHSC1L1, Accession NP_060248.2), a gene which restores repair of base- base and single- nucleotide insertion- deletion mismatches, and increases the proficiency to process heteroduplexes with insertion- deletion mismatches. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WHSC1L1.

[60828] The function of WHSC1L1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM412.1.WSB2 (Accession NP_061109.1) is another GAM8358 target gene, herein designated TARGET GENE. WSB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WSB2, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WSB2 BINDING SITE, designated SEQ ID:17131, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60829] Another function of GAM8358 is therefore inhibition of WSB2 (Accession NP_061109.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WSB2.

[60830] Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_647539.1) is another GAM8358 target gene, herein designated TARGET GENE. YWHAB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by YWHAB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YWHAB BINDING SITE, designated SEQ ID:8275, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60831] Another function of GAM8358 is therefore inhibition of Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_647539.1), a gene which activates tyrosine and tryptophan hydroxylases in the presence of protein kinase ii, and strongly activates protein kinase c. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YWHAB.

[60832] The function of YWHAB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2. Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_003395.1) is another GAM8358 target gene, herein designated TARGET GENE. YWHAB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by YWHAB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YWHAB BINDING SITE, designated SEQ ID:8275, to the nucleotide sequence of GAM8358

RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60833] Another function of GAM8358 is therefore inhibition of Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_003395.1), a gene which activates tyrosine and tryptophan hydroxylases in the presence of protein kinase ii, and strongly activates protein kinase c. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YWHAB.

[60834] The function of YWHAB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2. Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_003395.1) is another GAM8358 target gene, herein designated TARGET GENE. YWHAB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by YWHAB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of YWHAB BINDING SITE, designated SEQ ID:8275, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60835] Another function of GAM8358 is therefore inhibition of Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, beta polypeptide (YWHAB, Accession NP_003395.1), a gene which activates tyrosine and tryptophan hydroxylases in the presence of protein kinase ii, and strongly activates protein kinase c. Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YWHAB.

[60836] The function of YWHAB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.ZDHHC14 (Accession NP_714968.1) is another GAM8358 target gene, herein designated TARGET GENE. ZDHHC14 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZDHHC14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of ZDHHC14 BINDING SITE, designated SEQ ID:11339, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60837] Another function of GAM8358 is therefore inhibition of ZDHHC14 (Accession NP_714968.1) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZDHHC14.

[60838] ZDHHC14 (Accession NP_078906.2) is another GAM8358 target gene, herein designated TARGET GENE. ZDHHC14 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZDHHC14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZDHHC14 BINDING SITE, designated SEQ ID:11339, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60839] Another function of GAM8358 is therefore inhibition of ZDHHC14 (Accession NP_078906.2) . Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with ZD-HHC14.

[60840] Zinc finger protein 302 (ZNF302, Accession NP_061145.1) is another GAM8358 target gene, herein designated TARGET GENE. ZNF302 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZNF302, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF302 BINDING SITE, designated SEQ ID:15235, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60841] Another function of GAM8358 is therefore inhibition of Zinc finger protein 302 (ZNF302, Accession NP_061145.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF302.

[60842] Zinc finger protein 302 (ZNF302, Accession NP_060913.1) is another GAM8358 target gene, herein designated TARGET GENE. ZNF302 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZNF302, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF302 BINDING SITE, designated SEQ ID:15235, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60843] Another function of GAM8358 is therefore inhibition of Zinc finger protein 302 (ZNF302, Accession NP_060913.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF302.

[60844] Zinc finger protein 313 (ZNF313, Accession NP_061153.1) is another GAM8358 target gene, herein designated TARGET GENE. ZNF313 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF313 BINDING SITE, designated SEQ ID:13901, to the nucleotide sequence of GAM8358 RNA, herein designated GAM RNA, also designated SEQ ID:255.

[60845] Another function of GAM8358 is therefore inhibition of

Zinc finger protein 313 (ZNF313, Accession NP_061153.1). Accordingly, utilities of GAM8358 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF313.

[60846]

[60847] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 8554 (GAM8554), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[60848] GAM8554 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM8554 was detected is described hereinabove with reference to Figs. 8–15.

[60849] GAM8554 gene, herein designated GAM GENE, and GAM8554 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[60850] GAM8554 gene encodes a GAM8554 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM8554 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide se–

quence of GAM8554 precursor RNA is designated SEQ ID:1, and is provided hereinbelow with reference to the sequence listing part.

[60851] GAM8554 precursor RNA folds onto itself, forming GAM8554 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[60852] GAM8554 precursor RNA folds onto itself, forming GAM8554 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[60853] Nucleotide sequence of GAM8554 precursor RNA, designated SEQ-ID: 1, and a schematic representation of a pre-

dicted secondary folding of GAM8554 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[60854] An enzyme complex designated DICER COMPLEX, `dices` the GAM8554 folded precursor RNA into GAM8554 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM8554 RNA is designated SEQ ID:388, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[60855] GAM8554 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM8554 target RNA, herein designated GAM TARGET RNA. GAM8554 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[60856] GAM8554 RNA, herein designated GAM RNA, binds com-

plementarily to one or more target binding sites located in untranslated regions of GAM8554 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM8554 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM8554 RNA may have a different number of target binding sites in untranslated regions of a GAM8554 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only. These target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[60857] The complementary binding of GAM8554 RNA, herein designated GAM RNA, to target binding sites on GAM8554 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM8554 target RNA into GAM8554

target protein, herein designated GAM TARGET PROTEIN.
GAM target protein is therefore outlined by a broken line.

[60858] It is appreciated that GAM8554 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM8554 target genes. The mRNA of each one of this plurality of GAM8554 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM8554 RNA, herein designated GAM RNA, and which when bound by GAM8554 RNA causes inhibition of translation of respective one or more GAM8554 target proteins.

[60859] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM8554 gene, herein designated GAM GENE, on one or more GAM8554 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other

genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[60860] It is appreciated that specific functions and accordingly utilities of GAM8554 correlate with, and may be deduced from, the identity of the target genes which GAM8554 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[60861]

[60862]

[60863] V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_005148.1) is a GAM8554 target gene, herein designated TARGET GENE. ABL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABL1 BINDING SITE, designated SEQ ID:4735, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60864] A function of GAM8554 is therefore inhibition of V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_005148.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABL1.

[60865] V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_009297.1) is another GAM8554 target gene, herein designated TARGET GENE. ABL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABL1 BINDING SITE, designated SEQ ID:4735, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60866] Another function of GAM8554 is therefore inhibition of V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_009297.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABL1.

[60867] Afg3 atpase family gene 3-like 1 (yeast) (AFG3L1, Accession NP_001123.1) is another GAM8554 target gene,

herein designated TARGET GENE. AFG3L1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AFG3L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AFG3L1 BINDING SITE, designated SEQ ID:4913, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60868] Another function of GAM8554 is therefore inhibition of Afg3 atpase family gene 3-like 1 (yeast) (AFG3L1, Accession NP_001123.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AFG3L1.

[60869] Aldehyde dehydrogenase 4 family, member a1 (ALDH4A1, Accession NP_003739.2) is another GAM8554 target gene, herein designated TARGET GENE. ALDH4A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ALDH4A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH4A1 BINDING SITE, designated

SEQ ID:4955, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60870] Another function of GAM8554 is therefore inhibition of Aldehyde dehydrogenase 4 family, member a1 (ALDH4A1, Accession NP_003739.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH4A1.

[60871] Aldehyde dehydrogenase 4 family, member a1 (ALDH4A1, Accession NP_733844.1) is another GAM8554 target gene, herein designated TARGET GENE. ALDH4A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ALDH4A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH4A1 BINDING SITE, designated SEQ ID:4955, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60872] Another function of GAM8554 is therefore inhibition of Aldehyde dehydrogenase 4 family, member a1 (ALDH4A1, Accession NP_733844.1) . Accordingly, utilities of

GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH4A1.

[60873] Adaptor-related protein complex 1, gamma 1 subunit (AP1G1, Accession NP_001119.2) is another GAM8554 target gene, herein designated TARGET GENE. AP1G1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AP1G1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1G1 BINDING SITE, designated SEQ ID:18932, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60874] Another function of GAM8554 is therefore inhibition of Adaptor-related protein complex 1, gamma 1 subunit (AP1G1, Accession NP_001119.2), a gene which promotes the formation of clathrin-coated pits and vesicles. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1G1.

[60875] The function of AP1G1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM388.2.Adaptor-related protein complex 1, mu 1 subunit (AP1M1, Accession NP_115882.1) is another GAM8554 target gene, herein designated TARGET GENE. AP1M1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AP1M1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1M1 BINDING SITE, designated SEQ ID:7039, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60876] Another function of GAM8554 is therefore inhibition of Adaptor-related protein complex 1, mu 1 subunit (AP1M1, Accession NP_115882.1), a gene which promotes the formation of clathrin-coated pits and vesicles. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1M1.

[60877] The function of AP1M1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.APRG1 (Accession NP_848029.1) is another GAM8554 target gene, herein designated TARGET GENE.

APRG1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by APRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APRG1 BINDING SITE, designated SEQ ID:9637, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60878] Another function of GAM8554 is therefore inhibition of APRG1 (Accession NP_848029.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APRG1.

[60879] APRG1 (Accession NP_848028.1) is another GAM8554 target gene, herein designated TARGET GENE. APRG1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by APRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APRG1 BINDING SITE, designated SEQ ID:9637, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ

ID:388.

[60880] Another function of GAM8554 is therefore inhibition of APRG1 (Accession NP_848028.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APRG1.

[60881] APRG1 (Accession NP_848032.1) is another GAM8554 target gene, herein designated TARGET GENE. APRG1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APRG1 BINDING SITE, designated SEQ ID:9637, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60882] Another function of GAM8554 is therefore inhibition of APRG1 (Accession NP_848032.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APRG1.

[60883] ARH (Accession NP_056442.1) is another GAM8554 target gene, herein designated TARGET GENE. ARH BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by ARH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARH BINDING SITE, designated SEQ ID:18536, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60884] Another function of GAM8554 is therefore inhibition of ARH (Accession NP_056442.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARH.

[60885] Adp-ribosylation factor-like 2 (ARL2, Accession NP_001658.1) is another GAM8554 target gene, herein designated TARGET GENE. ARL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ARL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARL2 BINDING SITE, designated SEQ ID:9268, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60886] Another function of GAM8554 is therefore inhibition of

Adp-ribosylation factor-like 2 (ARL2, Accession NP_001658.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARL2.

[60887] Actin related protein 2/3 complex, subunit 3, 21kda (ARPC3, Accession NP_005710.1) is another GAM8554 target gene, herein designated TARGET GENE. ARPC3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ARPC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPC3 BINDING SITE, designated SEQ ID:10193, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60888] Another function of GAM8554 is therefore inhibition of Actin related protein 2/3 complex, subunit 3, 21kda (ARPC3, Accession NP_005710.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPC3.

[60889] ASF1B (Accession NP_060624.1) is another GAM8554 target gene, herein designated TARGET GENE. ASF1B BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by ASF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASF1B BINDING SITE, designated SEQ ID:4386, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60890] Another function of GAM8554 is therefore inhibition of ASF1B (Accession NP_060624.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASF1B.

[60891] Atpase, class v, type 10a (ATP10A, Accession NP_077816.1) is another GAM8554 target gene, herein designated TARGET GENE. ATP10A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ATP10A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP10A BINDING SITE, designated SEQ ID:12086, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60892] Another function of GAM8554 is therefore inhibition of

Atpase, class v, type 10a (ATP10A, Accession NP_077816.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP10A.

[60893] Atpase inhibitory factor 1 (ATPIF1, Accession NP_835498.1) is another GAM8554 target gene, herein designated TARGET GENE. ATPIF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ATPIF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATPIF1 BINDING SITE, designated SEQ ID:19002, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60894] Another function of GAM8554 is therefore inhibition of Atpase inhibitory factor 1 (ATPIF1, Accession NP_835498.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATPIF1.

[60895] Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1) is another GAM8554 target gene, herein designated TARGET GENE.

BACH2 BINDING SITE1 and BACH2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BACH2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACH2 BINDING SITE1 and BACH2 BINDING SITE2, designated SEQ ID:17751 and SEQ ID:19189 respectively, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60896] Another function of GAM8554 is therefore inhibition of Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1), a gene which acts as repressor or activator, binds to maf recognition elements and therefore may be associated with Non-hodgkin lymphoma. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Non-hodgkin lymphoma, and of other diseases and clinical conditions associated with BACH2.

[60897] The function of BACH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.BOP (Accession XP_097915.2) is another

GAM8554 target gene, herein designated TARGET GENE. BOP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BOP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BOP BINDING SITE, designated SEQ ID:3691, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60898] Another function of GAM8554 is therefore inhibition of BOP (Accession XP_097915.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BOP.

[60899] C14orf113 (Accession NP_060100.1) is another GAM8554 target gene, herein designated TARGET GENE. C14orf113 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf113 BINDING SITE, designated SEQ ID:13492, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60900] Another function of GAM8554 is therefore inhibition of C14orf113 (Accession NP_060100.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf113.

[60901] Chromosome 9 open reading frame 19 (C9orf19, Accession NP_071738.1) is another GAM8554 target gene, herein designated TARGET GENE. C9orf19 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C9orf19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf19 BINDING SITE, designated SEQ ID:4682, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60902] Another function of GAM8554 is therefore inhibition of Chromosome 9 open reading frame 19 (C9orf19, Accession NP_071738.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf19.

[60903] Chromosome 9 open reading frame 25 (C9orf25, Accession NP_671735.1) is another GAM8554 target gene,

herein designated TARGET GENE. C9orf25 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C9orf25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf25 BINDING SITE, designated SEQ ID:1932, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60904] Another function of GAM8554 is therefore inhibition of Chromosome 9 open reading frame 25 (C9orf25, Accession NP_671735.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf25.

[60905] Carbonic anhydrase vi (CA6, Accession NP_001206.1) is another GAM8554 target gene, herein designated TARGET GENE. CA6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CA6 BINDING SITE, designated SEQ ID:4909, to the nucleotide sequence of GAM8554 RNA, herein design-

nated GAM RNA, also designated SEQ ID:388.

[60906] Another function of GAM8554 is therefore inhibition of Carbonic anhydrase vi (CA6, Accession NP_001206.1), a gene which has a function of reversible hydration of carbon dioxide. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CA6.

[60907] The function of CA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1617.1. Calcium channel, voltage-dependent, alpha 2/delta subunit 2 (CACNA2D2, Accession NP_006021.1) is another GAM8554 target gene, herein designated TARGET GENE. CACNA2D2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CACNA2D2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNA2D2 BINDING SITE, designated SEQ ID:8973, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60908] Another function of GAM8554 is therefore inhibition of

Calcium channel, voltage-dependent, alpha 2/delta sub-unit 2 (CACNA2D2, Accession NP_006021.1), a gene which is a calcium channel protein which plays an important role in excitation-contraction coupling. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNA2D2.

[60909] The function of CACNA2D2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.CAP350 (Accession NP_055625.2) is another GAM8554 target gene, herein designated TARGET GENE. CAP350 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CAP350, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAP350 BINDING SITE, designated SEQ ID:11531, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60910] Another function of GAM8554 is therefore inhibition of CAP350 (Accession NP_055625.2). Accordingly, utilities

of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAP350.

[60911] Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1) is another GAM8554 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:14684, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60912] Another function of GAM8554 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor-induced apoptosis. and therefore may be associated with Huntington-related neurodegenerative diseases. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Huntington-related neurodegenerative dis-

eases, and of other diseases and clinical conditions associated with CASP8.

[60913] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Chemokine (c-c motif) receptor 7 (CCR7, Accession NP_001829.1) is another GAM8554 target gene, herein designated TARGET GENE. CCR7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CCR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR7 BINDING SITE, designated SEQ ID:1279, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60914] Another function of GAM8554 is therefore inhibition of Chemokine (c-c motif) receptor 7 (CCR7, Accession NP_001829.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR7.

[60915] Chromodomain helicase dna binding protein 4 (CHD4, Accession NP_001264.1) is another GAM8554 target gene,

herein designated TARGET GENE. CHD4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CHD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHD4 BINDING SITE, designated SEQ ID:2554, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60916] Another function of GAM8554 is therefore inhibition of Chromodomain helicase dna binding protein 4 (CHD4, Accession NP_001264.1), a gene which may regulate gene expression and chromatin structure and therefore may be associated with Dermatomyositis. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Dermatomyositis, and of other diseases and clinical conditions associated with CHD4.

[60917] The function of CHD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Carbohydrate (n-acetylglucosamine-6-o) sulfotransferase 2 (CHST2, Accession NP_004258.2) is another GAM8554 target gene, herein designated TARGET

GENE. CHST2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CHST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHST2 BINDING SITE, designated SEQ ID:5960, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60918] Another function of GAM8554 is therefore inhibition of Carbohydrate (n-acetylglucosamine-6-o) sulfotransferase 2 (CHST2, Accession NP_004258.2), a gene which may serve as a transmembrane domain for a type II protein or as a Golgi retention signal. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST2.

[60919] The function of CHST2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.1. Ciliary neurotrophic factor (CNTF, Accession NP_000605.1) is another GAM8554 target gene, herein designated TARGET GENE. CNTF BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNTF BINDING SITE, designated SEQ ID:19190, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60920] Another function of GAM8554 is therefore inhibition of Ciliary neurotrophic factor (CNTF, Accession NP_000605.1), a gene which is a survival factor for various neuronal cell types. and therefore may be associated with Ciliary neurotrophic factor polymorphism. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Ciliary neurotrophic factor polymorphism, and of other diseases and clinical conditions associated with CNTF.

[60921] The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Carnitine acetyltransferase (CRAT, Accession NP_003994.2) is another GAM8554 target gene, herein designated TARGET GENE. CRAT BINDING SITE is a target binding site found in the 5' untranslated region of multi-

ple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRAT BINDING SITE, designated SEQ ID:8044, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60922] Another function of GAM8554 is therefore inhibition of Carnitine acetyltransferase (CRAT, Accession NP_003994.2), a gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions associated with CRAT.

[60923] The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM229.1.Corticotropin releasing hormone (CRH, Accession NP_000747.1) is another GAM8554 target gene, herein designated TARGET GENE. CRH BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by CRH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRH BINDING SITE, designated SEQ ID:7497, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60924] Another function of GAM8554 is therefore inhibition of Corticotropin releasing hormone (CRH, Accession NP_000747.1), a gene which regulates the release of corticotropin from pituitary gland. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions associated with CRH.

[60925] The function of CRH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM371.1. Chemokine (c-x-c motif) ligand 9 (CXCL9, Accession NP_002407.1) is another GAM8554 target gene, herein designated TARGET GENE. CXCL9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CXCL9, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXCL9 BINDING SITE, designated SEQ ID:548, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60926] Another function of GAM8554 is therefore inhibition of Chemokine (c-x-c motif) ligand 9 (CXCL9, Accession NP_002407.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXCL9.

[60927] Daz associated protein 2 (DAZAP2, Accession NP_055579.1) is another GAM8554 target gene, herein designated TARGET GENE. DAZAP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DAZAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DAZAP2 BINDING SITE, designated SEQ ID:12754, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60928] Another function of GAM8554 is therefore inhibition of

Daz associated protein 2 (DAZAP2, Accession NP_055579.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAZAP2.

[60929] DC2 (Accession NP_067050.1) is another GAM8554 target gene, herein designated TARGET GENE. DC2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DC2 BINDING SITE, designated SEQ ID:4382, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60930] Another function of GAM8554 is therefore inhibition of DC2 (Accession NP_067050.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DC2.

[60931] Desmin (DES, Accession NP_001918.2) is another GAM8554 target gene, herein designated TARGET GENE. DES BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DES, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DES BINDING SITE, designated SEQ ID:17929, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60932] Another function of GAM8554 is therefore inhibition of Desmin (DES, Accession NP_001918.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DES.

[60933] Deoxyguanosine kinase (DGUOK, Accession NP_550440.1) is another GAM8554 target gene, herein designated TARGET GENE. DGUOK BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DGUOK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGUOK BINDING SITE, designated SEQ ID:2183, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60934] Another function of GAM8554 is therefore inhibition of Deoxyguanosine kinase (DGUOK, Accession

NP_550440.1), a gene which is deoxyguanosine kinase and mediates phosphorylation of several deoxyribonucleosides and therefore may be associated with Mitochondrial dna depletion syndromes . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Mitochondrial dna depletion syndromes ., and of other diseases and clinical conditions associated with DGUOK.

[60935] The function of DGUOK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM385.2. Deoxyguanosine kinase (DGUOK, Accession NP_550438.1) is another GAM8554 target gene, herein designated TARGET GENE. DGUOK BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DGUOK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGUOK BINDING SITE, designated SEQ ID:2183, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60936] Another function of GAM8554 is therefore inhibition of Deoxyguanosine kinase (DGUOK, Accession

NP_550438.1), a gene which is deoxyguanosine kinase and mediates phosphorylation of several deoxyribonucleosides and therefore may be associated with Mitochondrial dna depletion syndromes . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Mitochondrial dna depletion syndromes ., and of other diseases and clinical conditions associated with DGUOK.

[60937] The function of DGUOK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM385.2.DHDDS (Accession NP_079163.1) is another GAM8554 target gene, herein designated TARGET GENE. DHDDS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHDDS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DHDDS BINDING SITE, designated SEQ ID:6851, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60938] Another function of GAM8554 is therefore inhibition of DHDDS (Accession NP_079163.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with DHDDS.

[60939] DHRS1 (Accession NP_612461.1) is another GAM8554 target gene, herein designated TARGET GENE. DHRS1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DHRS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DHRS1 BINDING SITE, designated SEQ ID:10467, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60940] Another function of GAM8554 is therefore inhibition of DHRS1 (Accession NP_612461.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DHRS1.

[60941] DKFZP434F2021 (Accession NP_056227.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP434F2021 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434F2021, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F2021 BINDING SITE,

designated SEQ ID:10822, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60942] Another function of GAM8554 is therefore inhibition of DKFZP434F2021 (Accession NP_056227.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F2021.

[60943] DKFZP434H132 (Accession NP_056307.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP434H132 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434H132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434H132 BINDING SITE, designated SEQ ID:12087, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60944] Another function of GAM8554 is therefore inhibition of DKFZP434H132 (Accession NP_056307.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP434H132.

[60945] DKFZP434J046 (Accession NP_056486.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP434J046 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP434J046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434J046 BINDING SITE, designated SEQ ID:12435, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60946] Another function of GAM8554 is therefore inhibition of DKFZP434J046 (Accession NP_056486.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434J046.

[60947] DKFZP564O0423 (Accession XP_166254.2) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP564O0423 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564O0423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O0423 BINDING SITE, designated SEQ ID:2580, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60948] Another function of GAM8554 is therefore inhibition of DKFZP564O0423 (Accession XP_166254.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O0423.

[60949] DKFZP566K1924 (Accession NP_056278.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP566K1924 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP566K1924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566K1924 BINDING SITE, designated SEQ ID:2609, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60950] Another function of GAM8554 is therefore inhibition of DKFZP566K1924 (Accession NP_056278.1) . Accordingly,

utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566K1924.

[60951] DKFZP586I2223 (Accession NP_542768.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP586I2223 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DKFZP586I2223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586I2223 BINDING SITE, designated SEQ ID:8692, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60952] Another function of GAM8554 is therefore inhibition of DKFZP586I2223 (Accession NP_542768.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586I2223.

[60953] DKFZP586I2223 (Accession NP_542769.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP586I2223 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts

of mRNA encoded by DKFZP586I2223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586I2223 BINDING SITE, designated SEQ ID:8692, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60954] Another function of GAM8554 is therefore inhibition of DKFZP586I2223 (Accession NP_542769.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586I2223.

[60955] DKFZP586I2223 (Accession NP_056253.2) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP586I2223 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DKFZP586I2223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586I2223 BINDING SITE, designated SEQ ID:8692, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60956] Another function of GAM8554 is therefore inhibition of DKFZP586I2223 (Accession NP_056253.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586I2223.

[60957] DKFZp761B107 (Accession NP_775734.1) is another GAM8554 target gene, herein designated TARGET GENE. DKFZp761B107 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761B107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B107 BINDING SITE, designated SEQ ID:11144, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60958] Another function of GAM8554 is therefore inhibition of DKFZp761B107 (Accession NP_775734.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B107.

[60959] DKFZp761O2018 (Accession XP_044062.3) is another GAM8554 target gene, herein designated TARGET GENE.

DKFZp761O2018 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761O2018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761O2018 BINDING SITE, designated SEQ ID:14901, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60960] Another function of GAM8554 is therefore inhibition of DKFZp761O2018 (Accession XP_044062.3) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761O2018.

[60961] DKFZP762N2316 (Accession NP_067047.2) is another GAM8554 target gene, herein designated TARGET GENE. DKFZP762N2316 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DKFZP762N2316, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP762N2316 BINDING SITE, designated SEQ ID:19658, to

the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60962] Another function of GAM8554 is therefore inhibition of DKFZP762N2316 (Accession NP_067047.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP762N2316.

[60963] Eukaryotic translation initiation factor 4 gamma, 1 (EIF4G1, Accession NP_004944.1) is another GAM8554 target gene, herein designated TARGET GENE. EIF4G1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EIF4G1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF4G1 BINDING SITE, designated SEQ ID:7541, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60964] Another function of GAM8554 is therefore inhibition of Eukaryotic translation initiation factor 4 gamma, 1 (EIF4G1, Accession NP_004944.1), a gene which is a Translation initiation factor. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with EIF4G1.

[60965] The function of EIF4G1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM221.1. Ectonucleoside triphosphate diphosphohydrolase 6 (putative function) (ENTPD6, Accession NP_001238.1) is another GAM8554 target gene, herein designated TARGET GENE. ENTPD6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ENTPD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ENTPD6 BINDING SITE, designated SEQ ID:12576, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60966] Another function of GAM8554 is therefore inhibition of Ectonucleoside triphosphate diphosphohydrolase 6 (putative function) (ENTPD6, Accession NP_001238.1), a gene which might support glycosylation reactions in the golgi apparatus and, when released from cells, might catalyze the hydrolysis of extracellular nucleotides. Accordingly, utilities of GAM8554 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with ENTPD6.

[60967] The function of ENTPD6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.ERK8 (Accession NP_620590.1) is another GAM8554 target gene, herein designated TARGET GENE. ERK8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ERK8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERK8 BINDING SITE, designated SEQ ID:15517, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60968] Another function of GAM8554 is therefore inhibition of ERK8 (Accession NP_620590.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERK8.

[60969] Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) is another GAM8554 target gene, herein designated TARGET GENE. EVI5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by EVI5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVI5 BINDING SITE, designated SEQ ID:5538, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60970] Another function of GAM8554 is therefore inhibition of Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVI5.

[60971] Family with sequence similarity 10, member a3 (FAM10A3, Accession XP_015334.4) is another GAM8554 target gene, herein designated TARGET GENE. FAM10A3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FAM10A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAM10A3 BINDING SITE, designated SEQ ID:874, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60972] Another function of GAM8554 is therefore inhibition of Family with sequence similarity 10, member a3 (FAM10A3, Accession XP_015334.4) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAM10A3.

[60973] FBXO16 (Accession NP_758954.1) is another GAM8554 target gene, herein designated TARGET GENE. FBXO16 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FBXO16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO16 BINDING SITE, designated SEQ ID:9967, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60974] Another function of GAM8554 is therefore inhibition of FBXO16 (Accession NP_758954.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO16.

[60975] FLJ00007 (Accession NP_258260.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ00007 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ00007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00007 BINDING SITE, designated SEQ ID:4850, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60976] Another function of GAM8554 is therefore inhibition of FLJ00007 (Accession NP_258260.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00007.

[60977] FLJ11301 (Accession NP_060855.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ11301 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11301, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11301 BINDING SITE, designated SEQ ID:18187, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60978] Another function of GAM8554 is therefore inhibition of

FLJ11301 (Accession NP_060855.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11301.

[60979] FLJ12895 (Accession NP_076415.2) is another GAM8554 target gene, herein designated TARGET GENE. FLJ12895 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ12895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12895 BINDING SITE, designated SEQ ID:18925, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60980] Another function of GAM8554 is therefore inhibition of FLJ12895 (Accession NP_076415.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12895.

[60981] FLJ12960 (Accession NP_078914.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ12960 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12960, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12960 BINDING SITE, designated SEQ ID:13088, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60982] Another function of GAM8554 is therefore inhibition of FLJ12960 (Accession NP_078914.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12960.

[60983] FLJ20707 (Accession NP_060406.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ20707 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FLJ20707, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20707 BINDING SITE, designated SEQ ID:16918, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60984] Another function of GAM8554 is therefore inhibition of

FLJ20707 (Accession NP_060406.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20707.

[60985] FLJ20898 (Accession NP_078876.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ20898 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ20898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20898 BINDING SITE, designated SEQ ID:12410, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60986] Another function of GAM8554 is therefore inhibition of FLJ20898 (Accession NP_078876.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20898.

[60987] FLJ22944 (Accession NP_079421.2) is another GAM8554 target gene, herein designated TARGET GENE. FLJ22944 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ22944, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22944 BINDING SITE, designated SEQ ID:10158, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60988] Another function of GAM8554 is therefore inhibition of FLJ22944 (Accession NP_079421.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22944.

[60989] FLJ23867 (Accession NP_689875.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ23867 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23867, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23867 BINDING SITE, designated SEQ ID:13980, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60990] Another function of GAM8554 is therefore inhibition of FLJ23867 (Accession NP_689875.1) . Accordingly, utilities

of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23867.

[60991] FLJ25756 (Accession NP_776175.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ25756 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ25756, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25756 BINDING SITE, designated SEQ ID:3815, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60992] Another function of GAM8554 is therefore inhibition of FLJ25756 (Accession NP_776175.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25756.

[60993] FLJ30934 (Accession NP_689973.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ30934 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30934, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30934 BINDING SITE, designated SEQ ID:13660, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60994] Another function of GAM8554 is therefore inhibition of FLJ30934 (Accession NP_689973.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30934.

[60995] FLJ31166 (Accession NP_694567.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ31166 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31166 BINDING SITE, designated SEQ ID:17040, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60996] Another function of GAM8554 is therefore inhibition of FLJ31166 (Accession NP_694567.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ31166.

[60997] FLJ31318 (Accession NP_689499.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ31318 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31318 BINDING SITE, designated SEQ ID:10740, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[60998] Another function of GAM8554 is therefore inhibition of FLJ31318 (Accession NP_689499.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31318.

[60999] FLJ32825 (Accession NP_689705.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ32825 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ32825, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ32825 BINDING SITE, designated SEQ ID:11776, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61000] Another function of GAM8554 is therefore inhibition of FLJ32825 (Accession NP_689705.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32825.

[61001] FLJ35936 (Accession NP_775735.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ35936 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ35936, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35936 BINDING SITE, designated SEQ ID:1674, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61002] Another function of GAM8554 is therefore inhibition of FLJ35936 (Accession NP_775735.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ35936.

[61003] FLJ38499 (Accession NP_776158.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ38499 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ38499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38499 BINDING SITE, designated SEQ ID:16881, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61004] Another function of GAM8554 is therefore inhibition of FLJ38499 (Accession NP_776158.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38499.

[61005] FLJ39106 (Accession NP_775900.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ39106 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ39106 BINDING SITE, designated SEQ ID:8062, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61006] Another function of GAM8554 is therefore inhibition of FLJ39106 (Accession NP_775900.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39106.

[61007] FLJ40852 (Accession NP_775948.1) is another GAM8554 target gene, herein designated TARGET GENE. FLJ40852 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40852, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40852 BINDING SITE, designated SEQ ID:1720, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61008] Another function of GAM8554 is therefore inhibition of FLJ40852 (Accession NP_775948.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40852.

[61009] Forkhead box d4 (FOXD4, Accession XP_095746.6) is another GAM8554 target gene, herein designated TARGET GENE. FOXD4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FOXD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXD4 BINDING SITE, designated SEQ ID:10798, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61010] Another function of GAM8554 is therefore inhibition of Forkhead box d4 (FOXD4, Accession XP_095746.6). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXD4.

[61011] FOXD4L1 (Accession NP_036316.1) is another GAM8554 target gene, herein designated TARGET GENE. FOXD4L1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FOXD4L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FOXD4L1 BINDING SITE, designated SEQ ID:14436, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61012] Another function of GAM8554 is therefore inhibition of FOXD4L1 (Accession NP_036316.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXD4L1.

[61013] FUK (Accession NP_659496.1) is another GAM8554 target gene, herein designated TARGET GENE. FUK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUK BINDING SITE, designated SEQ ID:16844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61014] Another function of GAM8554 is therefore inhibition of FUK (Accession NP_659496.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUK.

[61015] Fucosyltransferase 3 (galactoside

3(4)-l-fucosyltransferase, lewis blood group included) (FUT3, Accession NP_000140.1) is another GAM8554 target gene, herein designated TARGET GENE. FUT3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT3 BINDING SITE, designated SEQ ID:2915, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61016] Another function of GAM8554 is therefore inhibition of Fucosyltransferase 3 (galactoside 3(4)-l-fucosyltransferase, lewis blood group included) (FUT3, Accession NP_000140.1), a gene which may catalyze alpha- 1,3 and alpha- 1,4 glycosidic linkages involved in the expression of vim- 2, lewis a, lewis b, sialyl lewis x and lewis x/ssea- 1 antigens. and therefore may be associated with Lewis- negative disease. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Lewis- negative disease., and of other diseases and clinical conditions associated with FUT3.

[61017] The function of FUT3 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.1. Fucosyltransferase 5 (alpha (1,3) fucosyltransferase) (FUT5, Accession NP_002025.1) is another GAM8554 target gene, herein designated TARGET GENE. FUT5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT5 BINDING SITE, designated SEQ ID:2915, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61018] Another function of GAM8554 is therefore inhibition of Fucosyltransferase 5 (alpha (1,3) fucosyltransferase) (FUT5, Accession NP_002025.1), a gene which may catalyse alpha- 1,3 glycosidic linkages involved in the expression of vim- 2, lewis x/ssea- 1 and sialyl lewis x antigens. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT5.

[61019] The function of FUT5 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM180.1. Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1) is another GAM8554 target gene, herein designated TARGET GENE. FUT6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT6 BINDING SITE, designated SEQ ID:7499, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61020] Another function of GAM8554 is therefore inhibition of Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1), a gene which is involved in the biosynthesis of the e-selectin ligand, sialyl-lewis x. catalyzes the transfer of fucose from gdp-beta-fucose to alpha-2,3 sialylated substrates. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT6.

[61021] The function of FUT6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM47.1.Fucosyltransferase 9 (alpha (1,3) fucosyltransferase) (FUT9, Accession NP_006572.1) is another GAM8554 target gene, herein designated TARGET GENE. FUT9 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FUT9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT9 BINDING SITE, designated SEQ ID:16065, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61022] Another function of GAM8554 is therefore inhibition of Fucosyltransferase 9 (alpha (1,3) fucosyltransferase) (FUT9, Accession NP_006572.1), a gene which catalyzes alpha- 1,3 glycosidic linkages. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT9.

[61023] The function of FUT9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.1.Grb2-associated binding protein 2 (GAB2, Accession NP_036428.1) is another GAM8554 target gene, herein designated TARGET GENE. GAB2 BINDING SITE is a

target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GAB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAB2 BINDING SITE, designated SEQ ID:7231, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61024] Another function of GAM8554 is therefore inhibition of Grb2-associated binding protein 2 (GAB2, Accession NP_036428.1), a gene which act as adapters for transmitting various signals. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAB2.

[61025] The function of GAB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Grb2-associated binding protein 2 (GAB2, Accession NP_536739.1) is another GAM8554 target gene, herein designated TARGET GENE. GAB2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GAB2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAB2 BINDING SITE, designated SEQ ID:7231, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61026] Another function of GAM8554 is therefore inhibition of Grb2-associated binding protein 2 (GAB2, Accession NP_536739.1), a gene which act as adapters for transmitting various signals. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAB2.

[61027] The function of GAB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Growth arrest-specific 7 (GAS7, Accession NP_005881.1) is another GAM8554 target gene, herein designated TARGET GENE. GAS7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GAS7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAS7 BINDING SITE, designated SEQ ID:19750, to the nucleotide

sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61028] Another function of GAM8554 is therefore inhibition of Growth arrest-specific 7 (GAS7, Accession NP_005881.1), a gene which may play a role in promoting maturation and morphological differentiation of cerebellar neurons. and therefore may be associated with Leukemias with myeloid/lymphoid (mll). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Leukemias with myeloid/lymphoid (mll), and of other diseases and clinical conditions associated with GAS7.

[61029] The function of GAS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Growth arrest-specific 7 (GAS7, Accession NP_003635.1) is another GAM8554 target gene, herein designated TARGET GENE. GAS7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GAS7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAS7 BINDING SITE, designated SEQ ID:19750, to the nucleotide

sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61030] Another function of GAM8554 is therefore inhibition of Growth arrest-specific 7 (GAS7, Accession NP_003635.1), a gene which may play a role in promoting maturation and morphological differentiation of cerebellar neurons. and therefore may be associated with Leukemias with myeloid/lymphoid (mll). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Leukemias with myeloid/lymphoid (mll), and of other diseases and clinical conditions associated with GAS7.

[61031] The function of GAS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Golgi autoantigen, golgin subfamily a, 1 (GOLGA1, Accession NP_002068.1) is another GAM8554 target gene, herein designated TARGET GENE. GOLGA1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GOLGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA1 BINDING SITE, designated SEQ ID:5615, to the

nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61032] Another function of GAM8554 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 1 (GOLGA1, Accession NP_002068.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA1.

[61033] Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) is another GAM8554 target gene, herein designated TARGET GENE. GRIN2B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GRIN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN2B BINDING SITE, designated SEQ ID:10992, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61034] Another function of GAM8554 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

GRIN2B.

[61035] G1 to s phase transition 2 (GSPT2, Accession NP_060564.1) is another GAM8554 target gene, herein designated TARGET GENE. GSPT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GSPT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSPT2 BINDING SITE, designated SEQ ID:8094, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61036] Another function of GAM8554 is therefore inhibition of G1 to s phase transition 2 (GSPT2, Accession NP_060564.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSPT2.

[61037] Hepatoma-derived growth factor (high-mobility group protein 1-like) (HDGF, Accession NP_004485.1) is another GAM8554 target gene, herein designated TARGET GENE. HDGF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HDGF, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HDGF BINDING SITE, designated SEQ ID:2702, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61038] Another function of GAM8554 is therefore inhibition of Hepatoma-derived growth factor (high-mobility group protein 1-like) (HDGF, Accession NP_004485.1), a gene which is a heparin-binding protein, with mitogenic activity for fibroblasts. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HDGF.

[61039] The function of HDGF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM204.2.HELNF1 (Accession XP_033511.7) is another GAM8554 target gene, herein designated TARGET GENE. HELNF1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HELNF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HELNF1 BINDING SITE, designated

SEQ ID:18562, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61040] Another function of GAM8554 is therefore inhibition of HELSNF1 (Accession XP_033511.7) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEL-SNF1.

[61041] HEMK (Accession NP_057257.1) is another GAM8554 target gene, herein designated TARGET GENE. HEMK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HEMK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:15386, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61042] Another function of GAM8554 is therefore inhibition of HEMK (Accession NP_057257.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK.

[61043] High mobility group at-hook 1 (HMGA1, Accession

NP_665909.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61044] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665909.1), a gene which orchestrates the assembly of a virus-induced enhanceosome by mediating a network of protein-DNA and protein-protein interactions. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61045] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. High mobility group at-hook 1 (HMGA1, Accession NP_002122.1) is another GAM8554 target gene,

herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61046] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_002122.1), a gene which orchestrates the assembly of a virus-induced enhanceosome by mediating a network of protein-DNA and protein-protein interactions. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61047] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. High mobility group at-hook 1 (HMGA1, Accession NP_665912.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61048] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665912.1), a gene which orchestrates the assembly of a virus- induced enhanceosome by mediating a network of protein- DNA and protein- protein interactions . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61049] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.High mobility group at-hook 1 (HMGA1, Accession NP_665906.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3` untranslated region

of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61050] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665906.1), a gene which orchestrates the assembly of a virus- induced enhanceosome by mediating a network of protein- DNA and protein- protein interactions . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61051] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.High mobility group at-hook 1 (HMGA1, Accession NP_665911.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HMGA1, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61052] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665911.1), a gene which orchestrates the assembly of a virus-induced enhanceosome by mediating a network of protein-DNA and protein-protein interactions. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61053] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. High mobility group at-hook 1 (HMGA1, Accession NP_665910.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61054] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665910.1), a gene which orchestrates the assembly of a virus- induced enhanceosome by mediating a network of protein- DNA and protein- protein interactions . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61055] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.High mobility group at-hook 1 (HMGA1, Accession NP_665907.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

illustrates the complementarity of the nucleotide sequences of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61056] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665907.1), a gene which orchestrates the assembly of a virus- induced enhanceosome by mediating a network of protein- DNA and protein- protein interactions . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61057] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. High mobility group at-hook 1 (HMGA1, Accession NP_665908.1) is another GAM8554 target gene, herein designated TARGET GENE. HMGA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HMGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of HMGA1 BINDING SITE, designated SEQ ID:13844, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61058] Another function of GAM8554 is therefore inhibition of High mobility group at-hook 1 (HMGA1, Accession NP_665908.1), a gene which orchestrates the assembly of a virus- induced enhanceosome by mediating a network of protein- DNA and protein- protein interactions . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA1.

[61059] The function of HMGA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Hermansky-pudlak syndrome 1 (HPS1, Accession NP_000186.1) is another GAM8554 target gene, herein designated TARGET GENE. HPS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPS1 BINDING SITE, designated SEQ ID:8078, to the nucleotide sequence of

GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61060] Another function of GAM8554 is therefore inhibition of Hermansky-pudlak syndrome 1 (HPS1, Accession NP_000186.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HPS1.

[61061] HRIHFB2122 (Accession NP_008963.2) is another GAM8554 target gene, herein designated TARGET GENE. HRIHFB2122 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HRIHFB2122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRIHFB2122 BINDING SITE, designated SEQ ID:3658, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61062] Another function of GAM8554 is therefore inhibition of HRIHFB2122 (Accession NP_008963.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRIHFB2122.

[61063] Heparan sulfate (glucosamine) 3-o-sulfotransferase 2 (HS3ST2, Accession NP_006034.1) is another GAM8554 target gene, herein designated TARGET GENE. HS3ST2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HS3ST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS3ST2 BINDING SITE, designated SEQ ID:3906, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61064] Another function of GAM8554 is therefore inhibition of Heparan sulfate (glucosamine) 3-o-sulfotransferase 2 (HS3ST2, Accession NP_006034.1), a gene which plays a role in the generation of heparan sulfate proteoglycan. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS3ST2.

[61065] The function of HS3ST2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM767.1. Heparan sulfate 6-o-sulfotransferase 2 (HS6ST2, Accession NP_671704.2) is another GAM8554

target gene, herein designated TARGET GENE. HS6ST2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by HS6ST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS6ST2 BINDING SITE, designated SEQ ID:13150, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61066] Another function of GAM8554 is therefore inhibition of Heparan sulfate 6-o-sulfotransferase 2 (HS6ST2, Accession NP_671704.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS6ST2.

[61067] Inducible t-cell co-stimulator (ICOS, Accession NP_036224.1) is another GAM8554 target gene, herein designated TARGET GENE. ICOS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ICOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICOS BINDING SITE, designated

SEQ ID:16504, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61068] Another function of GAM8554 is therefore inhibition of Inducible t-cell co-stimulator (ICOS, Accession NP_036224.1), a gene which forms homodimers and functions as an inducible T- cell co- stimulator. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICOS.

[61069] The function of ICOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM369.2. Interleukin 18 receptor 1 (IL18R1, Accession NP_003846.1) is another GAM8554 target gene, herein designated TARGET GENE. IL18R1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL18R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL18R1 BINDING SITE, designated SEQ ID:950, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61070] Another function of GAM8554 is therefore inhibition of Interleukin 18 receptor 1 (IL18R1, Accession NP_003846.1), a gene which is required for dorsal- ventral embryonic polarity and promotes heterophilic cellular adhesion. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL18R1.

[61071] The function of IL18R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1. Integrin beta 3 binding protein (beta3-endonexin) (ITGB3BP, Accession NP_055103.3) is another GAM8554 target gene, herein designated TARGET GENE. ITGB3BP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ITGB3BP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGB3BP BINDING SITE, designated SEQ ID:6219, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61072] Another function of GAM8554 is therefore inhibition of

Integrin beta 3 binding protein (beta3–endonexin) (ITGB3BP, Accession NP_055103.3), a gene which interacts with the cytoplasmic tail of the integrin beta– 3 subunit. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGB3BP.

[61073] The function of ITGB3BP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1701.2. Jun d proto–oncogene (JUND, Accession NP_005345.2) is another GAM8554 target gene, herein designated TARGET GENE. JUND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JUND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JUND BINDING SITE, designated SEQ ID:9711, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61074] Another function of GAM8554 is therefore inhibition of Jun d proto–oncogene (JUND, Accession NP_005345.2), a gene which binds an ap– 1 site. Accordingly, utilities of

GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JUND.

[61075] The function of JUND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM104.1.KAB (Accession NP_055627.1) is another GAM8554 target gene, herein designated TARGET GENE. KAB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KAB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KAB BINDING SITE, designated SEQ ID:6558, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61076] Another function of GAM8554 is therefore inhibition of KAB (Accession NP_055627.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KAB.

[61077] KIAA0375 (Accession XP_048462.1) is another GAM8554 target gene, herein designated TARGET GENE. KIAA0375 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0375, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0375 BINDING SITE, designated SEQ ID:12790, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61078] Another function of GAM8554 is therefore inhibition of KIAA0375 (Accession XP_048462.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0375.

[61079] KIAA0599 (Accession XP_085127.6) is another GAM8554 target gene, herein designated TARGET GENE. KIAA0599 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0599, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0599 BINDING SITE, designated SEQ ID:16996, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61080] Another function of GAM8554 is therefore inhibition of KIAA0599 (Accession XP_085127.6) . Accordingly, utilities

of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0599.

[61081] KIAA0953 (Accession XP_039733.2) is another GAM8554 target gene, herein designated TARGET GENE. KIAA0953 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0953 BINDING SITE, designated SEQ ID:2253, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61082] Another function of GAM8554 is therefore inhibition of KIAA0953 (Accession XP_039733.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0953.

[61083] KIAA0984 (Accession XP_037557.2) is another GAM8554 target gene, herein designated TARGET GENE. KIAA0984 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0984, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0984 BINDING SITE, designated SEQ ID:4106, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61084] Another function of GAM8554 is therefore inhibition of KIAA0984 (Accession XP_037557.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0984.

[61085] KIAA1045 (Accession XP_048592.1) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1045 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1045 BINDING SITE, designated SEQ ID:5832, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61086] Another function of GAM8554 is therefore inhibition of KIAA1045 (Accession XP_048592.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1045.

[61087] KIAA1394 (Accession XP_208522.1) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1394 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1394 BINDING SITE, designated SEQ ID:3139, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61088] Another function of GAM8554 is therefore inhibition of KIAA1394 (Accession XP_208522.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1394.

[61089] KIAA1713 (Accession XP_290811.1) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1713 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1713 BINDING SITE, designated SEQ ID:10338, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61090] Another function of GAM8554 is therefore inhibition of KIAA1713 (Accession XP_290811.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1713.

[61091] KIAA1843 (Accession XP_030838.3) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1843 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1843 BINDING SITE, designated SEQ ID:15579, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61092] Another function of GAM8554 is therefore inhibition of KIAA1843 (Accession XP_030838.3) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1843.

[61093] KIAA1870 (Accession NP_116277.1) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1870 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1870 BINDING SITE, designated SEQ ID:11147, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61094] Another function of GAM8554 is therefore inhibition of KIAA1870 (Accession NP_116277.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1870.

[61095] KIAA1940 (Accession XP_086981.2) is another GAM8554 target gene, herein designated TARGET GENE. KIAA1940 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1940 BINDING SITE, designated SEQ ID:16455, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61096] Another function of GAM8554 is therefore inhibition of KIAA1940 (Accession XP_086981.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1940.

[61097] Kinesin family member 13b (KIF13B, Accession NP_056069.1) is another GAM8554 target gene, herein designated TARGET GENE. KIF13B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF13B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF13B BINDING SITE, designated SEQ ID:11786, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61098] Another function of GAM8554 is therefore inhibition of Kinesin family member 13b (KIF13B, Accession NP_056069.1) . Accordingly, utilities of GAM8554 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF13B.

[61099] Kinesin family member 3c (KIF3C, Accession NP_002245.2) is another GAM8554 target gene, herein designated TARGET GENE. KIF3C BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF3C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF3C BINDING SITE, designated SEQ ID:16548, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61100] Another function of GAM8554 is therefore inhibition of Kinesin family member 3c (KIF3C, Accession NP_002245.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF3C.

[61101] Kallikrein 3, (prostate specific antigen) (KLK3, Accession NP_665863.1) is another GAM8554 target gene, herein designated TARGET GENE. KLK3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KLK3, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLK3 BINDING SITE, designated SEQ ID:14566, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61102] Another function of GAM8554 is therefore inhibition of Kallikrein 3, (prostate specific antigen) (KLK3, Accession NP_665863.1), a gene which functions in the liquefaction of seminal coagulum and therefore may be associated with Prostatic carcinoma. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Prostatic carcinoma, and of other diseases and clinical conditions associated with KLK3.

[61103] The function of KLK3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2. Kallikrein 3, (prostate specific antigen) (KLK3, Accession NP_001639.1) is another GAM8554 target gene, herein designated TARGET GENE. KLK3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KLK3, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLK3 BINDING SITE, designated SEQ ID:14566, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61104] Another function of GAM8554 is therefore inhibition of Kallikrein 3, (prostate specific antigen) (KLK3, Accession NP_001639.1), a gene which functions in the liquefaction of seminal coagulum and therefore may be associated with Prostatic carcinoma. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Prostatic carcinoma, and of other diseases and clinical conditions associated with KLK3.

[61105] The function of KLK3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2.L(3)mbt-like 2 (drosophila) (L3MBTL2, Accession NP_113676.2) is another GAM8554 target gene, herein designated TARGET GENE. L3MBTL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by L3MBTL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of L3MBTL2 BINDING SITE, designated SEQ ID:796, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61106] Another function of GAM8554 is therefore inhibition of L(3)mbt-like 2 (drosophila) (L3MBTL2, Accession NP_113676.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with L3MBTL2.

[61107] Laminin, gamma 2 (LAMC2, Accession NP_005553.1) is another GAM8554 target gene, herein designated TARGET GENE. LAMC2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LAMC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMC2 BINDING SITE, designated SEQ ID:13196, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61108] Another function of GAM8554 is therefore inhibition of Laminin, gamma 2 (LAMC2, Accession NP_005553.1) . Accordingly, utilities of GAM8554 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with LAMC2.

[61109] Lymphocyte cytosolic protein 2 (sh2 domain containing leukocyte protein of 76kda) (LCP2, Accession NP_005556.1) is another GAM8554 target gene, herein designated TARGET GENE. LCP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCP2 BINDING SITE, designated SEQ ID:7204, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61110] Another function of GAM8554 is therefore inhibition of Lymphocyte cytosolic protein 2 (sh2 domain containing leukocyte protein of 76kda) (LCP2, Accession NP_005556.1), a gene which involved in t cell antigen receptor mediated signaling. and therefore may be associated with Fetal hemorrhage and platelet dysfunction. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Fetal hemorrhage and platelet dysfunction, and of other diseases and clinical conditions as-

sociated with LCP2.

[61111] The function of LCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1. Lim domains containing 1 (LIMD1, Accession NP_055055.1) is another GAM8554 target gene, herein designated TARGET GENE. LIMD1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LIMD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMD1 BINDING SITE, designated SEQ ID:8280, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61112] Another function of GAM8554 is therefore inhibition of Lim domains containing 1 (LIMD1, Accession NP_055055.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMD1.

[61113] LOC116123 (Accession NP_620139.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC116123 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC116123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116123 BINDING SITE, designated SEQ ID:3173, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61114] Another function of GAM8554 is therefore inhibition of LOC116123 (Accession NP_620139.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116123.

[61115] LOC121952 (Accession XP_062872.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC121952 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC121952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121952 BINDING SITE, designated SEQ ID:15313, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also design-

nated SEQ ID:388.

[61116] Another function of GAM8554 is therefore inhibition of LOC121952 (Accession XP_062872.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121952.

[61117] LOC130752 (Accession XP_059468.3) is another GAM8554 target gene, herein designated TARGET GENE. LOC130752 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC130752, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130752 BINDING SITE, designated SEQ ID:10806, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61118] Another function of GAM8554 is therefore inhibition of LOC130752 (Accession XP_059468.3) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130752.

[61119] LOC139547 (Accession XP_066756.4) is another

GAM8554 target gene, herein designated TARGET GENE. LOC139547 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC139547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139547 BINDING SITE, designated SEQ ID:6100, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61120] Another function of GAM8554 is therefore inhibition of LOC139547 (Accession XP_066756.4) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139547.

[61121] LOC146909 (Accession XP_085634.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC146909 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146909 BINDING SITE, design-

nated SEQ ID:14000, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61122] Another function of GAM8554 is therefore inhibition of LOC146909 (Accession XP_085634.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146909.

[61123] LOC148710 (Accession XP_097506.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC148710 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC148710, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148710 BINDING SITE, designated SEQ ID:17195, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61124] Another function of GAM8554 is therefore inhibition of LOC148710 (Accession XP_097506.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC148710.

[61125] LOC149603 (Accession XP_047499.3) is another GAM8554 target gene, herein designated TARGET GENE. LOC149603 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149603 BINDING SITE, designated SEQ ID:7264, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61126] Another function of GAM8554 is therefore inhibition of LOC149603 (Accession XP_047499.3) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149603.

[61127] LOC150819 (Accession XP_097954.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC150819 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC150819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150819 BINDING SITE, designated SEQ ID:9583, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61128] Another function of GAM8554 is therefore inhibition of LOC150819 (Accession XP_097954.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150819.

[61129] LOC152765 (Accession XP_087519.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC152765 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152765, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152765 BINDING SITE, designated SEQ ID:4063, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61130] Another function of GAM8554 is therefore inhibition of LOC152765 (Accession XP_087519.1) . Accordingly, utili-

ties of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152765.

[61131] LOC158298 (Accession XP_098916.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC158298 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC158298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158298 BINDING SITE, designated SEQ ID:7028, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61132] Another function of GAM8554 is therefore inhibition of LOC158298 (Accession XP_098916.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158298.

[61133] LOC203082 (Accession XP_114620.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC203082 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC203082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203082 BINDING SITE, designated SEQ ID:4227, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61134] Another function of GAM8554 is therefore inhibition of LOC203082 (Accession XP_114620.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203082.

[61135] LOC253499 (Accession XP_172902.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC253499 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC253499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253499 BINDING SITE, designated SEQ ID:16092, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61136] Another function of GAM8554 is therefore inhibition of LOC253499 (Accession XP_172902.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253499.

[61137] LOC253992 (Accession XP_172953.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC253992 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC253992, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253992 BINDING SITE, designated SEQ ID:3239, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61138] Another function of GAM8554 is therefore inhibition of LOC253992 (Accession XP_172953.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253992.

[61139] LOC255849 (Accession XP_172855.1) is another GAM8554 target gene, herein designated TARGET GENE.

LOC255849 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC255849, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255849 BINDING SITE, designated SEQ ID:9954, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61140] Another function of GAM8554 is therefore inhibition of LOC255849 (Accession XP_172855.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255849.

[61141] LOC256861 (Accession XP_173004.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC256861 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256861 BINDING SITE, designated SEQ ID:14030, to the nucleotide sequence of

GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61142] Another function of GAM8554 is therefore inhibition of LOC256861 (Accession XP_173004.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256861.

[61143] LOC282915 (Accession XP_212579.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC282915 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282915, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282915 BINDING SITE, designated SEQ ID:8045, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61144] Another function of GAM8554 is therefore inhibition of LOC282915 (Accession XP_212579.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282915.

[61145] LOC282951 (Accession XP_212627.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC282951 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282951 BINDING SITE, designated SEQ ID:8045, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61146] Another function of GAM8554 is therefore inhibition of LOC282951 (Accession XP_212627.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282951.

[61147] LOC283028 (Accession XP_210862.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283028 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283028 BINDING SITE, designated SEQ ID:19511, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61148] Another function of GAM8554 is therefore inhibition of LOC283028 (Accession XP_210862.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283028.

[61149] LOC283278 (Accession XP_210961.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283278 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283278, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283278 BINDING SITE, designated SEQ ID:18729, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61150] Another function of GAM8554 is therefore inhibition of LOC283278 (Accession XP_210961.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283278.

[61151] LOC283314 (Accession XP_210969.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283314 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283314, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283314 BINDING SITE, designated SEQ ID:8601, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61152] Another function of GAM8554 is therefore inhibition of LOC283314 (Accession XP_210969.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283314.

[61153] LOC283690 (Accession XP_211167.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283690 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283690, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283690 BINDING SITE, designated SEQ ID:11309, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61154] Another function of GAM8554 is therefore inhibition of LOC283690 (Accession XP_211167.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283690.

[61155] LOC283849 (Accession NP_848611.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283849 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC283849, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283849 BINDING SITE, designated SEQ ID:2526, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61156] Another function of GAM8554 is therefore inhibition of

LOC283849 (Accession NP_848611.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283849.

[61157] LOC283861 (Accession NP_787095.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC283861 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283861 BINDING SITE, designated SEQ ID:13934, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61158] Another function of GAM8554 is therefore inhibition of LOC283861 (Accession NP_787095.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283861.

[61159] LOC283911 (Accession XP_211259.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC283911 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC283911, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283911 BINDING SITE, designated SEQ ID:17942, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61160] Another function of GAM8554 is therefore inhibition of LOC283911 (Accession XP_211259.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283911.

[61161] LOC284109 (Accession XP_211330.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC284109 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284109, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284109 BINDING SITE, designated SEQ ID:18036, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61162] Another function of GAM8554 is therefore inhibition of LOC284109 (Accession XP_211330.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284109.

[61163] LOC284999 (Accession XP_211728.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC284999 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284999 BINDING SITE, designated SEQ ID:11242, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61164] Another function of GAM8554 is therefore inhibition of LOC284999 (Accession XP_211728.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284999.

[61165] LOC285281 (Accession XP_211829.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285281 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285281 BINDING SITE, designated SEQ ID:8759, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61166] Another function of GAM8554 is therefore inhibition of LOC285281 (Accession XP_211829.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285281.

[61167] LOC285456 (Accession XP_209617.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285456 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285456 BINDING SITE, designated SEQ ID:683, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61168] Another function of GAM8554 is therefore inhibition of LOC285456 (Accession XP_209617.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285456.

[61169] LOC285602 (Accession XP_209676.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285602 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285602, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285602 BINDING SITE, designated SEQ ID:7057, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61170] Another function of GAM8554 is therefore inhibition of LOC285602 (Accession XP_209676.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285602.

[61171] LOC285727 (Accession XP_212000.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285727 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285727 BINDING SITE, designated SEQ ID:16880, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61172] Another function of GAM8554 is therefore inhibition of

LOC285727 (Accession XP_212000.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285727.

[61173] LOC285733 (Accession XP_212006.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285733 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285733, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285733 BINDING SITE, designated SEQ ID:18454, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61174] Another function of GAM8554 is therefore inhibition of LOC285733 (Accession XP_212006.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285733.

[61175] LOC285779 (Accession XP_212016.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285779 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC285779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285779 BINDING SITE, designated SEQ ID:10046, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61176] Another function of GAM8554 is therefore inhibition of LOC285779 (Accession XP_212016.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285779.

[61177] LOC285804 (Accession XP_212029.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285804 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285804, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285804 BINDING SITE, designated SEQ ID:15481, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also design-

nated SEQ ID:388.

[61178] Another function of GAM8554 is therefore inhibition of LOC285804 (Accession XP_212029.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285804.

[61179] LOC285833 (Accession XP_209790.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285833 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285833 BINDING SITE, designated SEQ ID:8045, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61180] Another function of GAM8554 is therefore inhibition of LOC285833 (Accession XP_209790.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285833.

[61181] LOC285843 (Accession XP_212034.1) is another

GAM8554 target gene, herein designated TARGET GENE. LOC285843 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285843 BINDING SITE, designated SEQ ID:2900, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61182] Another function of GAM8554 is therefore inhibition of LOC285843 (Accession XP_212034.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285843.

[61183] LOC285946 (Accession XP_212103.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC285946 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285946 BINDING SITE, design-

nated SEQ ID:1695, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61184] Another function of GAM8554 is therefore inhibition of LOC285946 (Accession XP_212103.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285946.

[61185] LOC286040 (Accession XP_209870.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC286040 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286040 BINDING SITE, designated SEQ ID:11421, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61186] Another function of GAM8554 is therefore inhibition of LOC286040 (Accession XP_209870.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286040.

[61187] LOC286258 (Accession XP_209972.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC286258 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286258, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286258 BINDING SITE, designated SEQ ID:15299, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61188] Another function of GAM8554 is therefore inhibition of LOC286258 (Accession XP_209972.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286258.

[61189] LOC286374 (Accession XP_212293.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC286374 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286374, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286374 BINDING SITE, designated SEQ ID:10194, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61190] Another function of GAM8554 is therefore inhibition of LOC286374 (Accession XP_212293.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286374.

[61191] LOC286380 (Accession XP_208412.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC286380 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286380, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286380 BINDING SITE, designated SEQ ID:867, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61192] Another function of GAM8554 is therefore inhibition of LOC286380 (Accession XP_208412.1) . Accordingly, utili-

ties of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286380.

[61193] LOC338682 (Accession XP_290521.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC338682 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338682 BINDING SITE, designated SEQ ID:10670, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61194] Another function of GAM8554 is therefore inhibition of LOC338682 (Accession XP_290521.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338682.

[61195] LOC339483 (Accession NP_848641.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC339483 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of

mRNA encoded by LOC339483, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339483 BINDING SITE, designated SEQ ID:10107, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61196] Another function of GAM8554 is therefore inhibition of LOC339483 (Accession NP_848641.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339483.

[61197] LOC339883 (Accession XP_291056.2) is another GAM8554 target gene, herein designated TARGET GENE. LOC339883 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339883, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339883 BINDING SITE, designated SEQ ID:9637, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61198] Another function of GAM8554 is therefore inhibition of LOC339883 (Accession XP_291056.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339883.

[61199] LOC340319 (Accession XP_295216.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC340319 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340319, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340319 BINDING SITE, designated SEQ ID:4660, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61200] Another function of GAM8554 is therefore inhibition of LOC340319 (Accession XP_295216.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340319.

[61201] LOC340390 (Accession XP_291269.1) is another GAM8554 target gene, herein designated TARGET GENE.

LOC340390 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340390, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340390 BINDING SITE, designated SEQ ID:2836, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61202] Another function of GAM8554 is therefore inhibition of LOC340390 (Accession XP_291269.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340390.

[61203] LOC348428 (Accession XP_302753.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC348428 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348428, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348428 BINDING SITE, designated SEQ ID:2990, to the nucleotide sequence of

GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61204] Another function of GAM8554 is therefore inhibition of LOC348428 (Accession XP_302753.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348428.

[61205] LOC348797 (Accession XP_302888.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC348797 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348797, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348797 BINDING SITE, designated SEQ ID:1312, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61206] Another function of GAM8554 is therefore inhibition of LOC348797 (Accession XP_302888.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348797.

[61207] LOC349192 (Accession XP_300973.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC349192 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349192, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349192 BINDING SITE, designated SEQ ID:13730, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61208] Another function of GAM8554 is therefore inhibition of LOC349192 (Accession XP_300973.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349192.

[61209] LOC349308 (Accession XP_302590.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC349308 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349308, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC349308 BINDING SITE, designated SEQ ID:8798, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61210] Another function of GAM8554 is therefore inhibition of LOC349308 (Accession XP_302590.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349308.

[61211] LOC349318 (Accession XP_300480.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC349318 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349318 BINDING SITE, designated SEQ ID:867, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61212] Another function of GAM8554 is therefore inhibition of LOC349318 (Accession XP_300480.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349318.

[61213] LOC349334 (Accession XP_300488.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC349334 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349334 BINDING SITE, designated SEQ ID:867, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61214] Another function of GAM8554 is therefore inhibition of LOC349334 (Accession XP_300488.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349334.

[61215] LOC349466 (Accession XP_303269.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC349466 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349466, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349466 BINDING SITE, designated SEQ ID:7281, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61216] Another function of GAM8554 is therefore inhibition of LOC349466 (Accession XP_303269.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349466.

[61217] LOC51161 (Accession NP_057294.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC51161 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51161 BINDING SITE, designated SEQ ID:12236, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61218] Another function of GAM8554 is therefore inhibition of LOC51161 (Accession NP_057294.1) . Accordingly, utili-

ties of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51161.

[61219] LOC90268 (Accession NP_612357.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC90268 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90268 BINDING SITE, designated SEQ ID:12418, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61220] Another function of GAM8554 is therefore inhibition of LOC90268 (Accession NP_612357.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90268.

[61221] LOC90499 (Accession XP_032170.1) is another GAM8554 target gene, herein designated TARGET GENE. LOC90499 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90499, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90499 BINDING SITE, designated SEQ ID:2928, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61222] Another function of GAM8554 is therefore inhibition of LOC90499 (Accession XP_032170.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90499.

[61223] Lysyl oxidase-like 3 (LOXL3, Accession NP_115992.1) is another GAM8554 target gene, herein designated TARGET GENE. LOXL3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOXL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOXL3 BINDING SITE, designated SEQ ID:11442, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61224] Another function of GAM8554 is therefore inhibition of Lysyl oxidase-like 3 (LOXL3, Accession NP_115992.1), a gene which is expressed in many tissues, the highest lev-

els seen in placenta, heart, ovary, testis, small intestine and spleen. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOXL3.

[61225] The function of LOXL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM664.2.LPHN1 (Accession NP_055736.1) is another GAM8554 target gene, herein designated TARGET GENE. LPHN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LPHN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LPHN1 BINDING SITE, designated SEQ ID:7496, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61226] Another function of GAM8554 is therefore inhibition of LPHN1 (Accession NP_055736.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LPHN1.

[61227] LRRC8 (Accession XP_026998.2) is another GAM8554 target gene, herein designated TARGET GENE. LRRC8 BIND-

ING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LRRC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRC8 BINDING SITE, designated SEQ ID:14275, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61228] Another function of GAM8554 is therefore inhibition of LRRC8 (Accession XP_026998.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRC8.

[61229] LYK5 (Accession NP_699166.1) is another GAM8554 target gene, herein designated TARGET GENE. LYK5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LYK5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYK5 BINDING SITE, designated SEQ ID:15716, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61230] Another function of GAM8554 is therefore inhibition of

LYK5 (Accession NP_699166.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYK5.

[61231] Mad, mothers against decapentaplegic homolog 9 (drosophila) (MADH9, Accession NP_005896.1) is another GAM8554 target gene, herein designated TARGET GENE. MADH9 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MADH9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADH9 BINDING SITE, designated SEQ ID:15488, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61232] Another function of GAM8554 is therefore inhibition of Mad, mothers against decapentaplegic homolog 9 (drosophila) (MADH9, Accession NP_005896.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADH9.

[61233] Mitogen-activated protein kinase kinase 1 interacting protein 1 (MAP2K1IP1, Accession NP_068805.1) is another GAM8554 target gene, herein designated TARGET GENE.

MAP2K1IP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAP2K1IP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K1IP1 BINDING SITE, designated SEQ ID:5192, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61234] Another function of GAM8554 is therefore inhibition of Mitogen-activated protein kinase kinase 1 interacting protein 1 (MAP2K1IP1, Accession NP_068805.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K1IP1.

[61235] Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2) is another GAM8554 target gene, herein designated TARGET GENE. MAP3K8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAP3K8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MAP3K8 BINDING SITE, designated SEQ ID:13588, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61236] Another function of GAM8554 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2), a gene which is able to activate nf- kappa- b 1 by stimulating proteasome-mediated p. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K8.

[61237] The function of MAP3K8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Mcm3 minichromosome maintenance deficient 3 (*s. cerevisiae*) associated protein, antisense (MCM3APAS, Accession NP_060588.1) is another GAM8554 target gene, herein designated TARGET GENE. MCM3APAS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MCM3APAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCM3APAS BINDING SITE, desig-

nated SEQ ID:5637, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61238] Another function of GAM8554 is therefore inhibition of Mcm3 minichromosome maintenance deficient 3 (*S. cerevisiae*) associated protein, antisense (MCM3APAS, Accession NP_060588.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCM3APAS.

[61239] Microfibrillar-associated protein 3 (MFAP3, Accession NP_005918.1) is another GAM8554 target gene, herein designated TARGET GENE. MFAP3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MFAP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFAP3 BINDING SITE, designated SEQ ID:18666, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61240] Another function of GAM8554 is therefore inhibition of Microfibrillar-associated protein 3 (MFAP3, Accession NP_005918.1). Accordingly, utilities of GAM8554 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MFAP3.

[61241] MGC29898 (Accession NP_659485.1) is another GAM8554 target gene, herein designated TARGET GENE. MGC29898 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC29898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29898 BINDING SITE, designated SEQ ID:817, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61242] Another function of GAM8554 is therefore inhibition of MGC29898 (Accession NP_659485.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29898.

[61243] MGC3101 (Accession NP_076948.1) is another GAM8554 target gene, herein designated TARGET GENE. MGC3101 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC3101 BINDING SITE, designated SEQ ID:10658, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61244] Another function of GAM8554 is therefore inhibition of MGC3101 (Accession NP_076948.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3101.

[61245] MGC3234 (Accession NP_076436.2) is another GAM8554 target gene, herein designated TARGET GENE. MGC3234 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3234, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3234 BINDING SITE, designated SEQ ID:4854, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61246] Another function of GAM8554 is therefore inhibition of MGC3234 (Accession NP_076436.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC3234.

[61247] MGC35048 (Accession NP_694940.1) is another GAM8554 target gene, herein designated TARGET GENE. MGC35048 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC35048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35048 BINDING SITE, designated SEQ ID:13468, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61248] Another function of GAM8554 is therefore inhibition of MGC35048 (Accession NP_694940.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35048.

[61249] MGC7036 (Accession NP_659495.1) is another GAM8554 target gene, herein designated TARGET GENE. MGC7036 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC7036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC7036 BINDING SITE, designated SEQ ID:14389, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61250] Another function of GAM8554 is therefore inhibition of MGC7036 (Accession NP_659495.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC7036.

[61251] Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009218.1) is another GAM8554 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:10848, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61252] Another function of GAM8554 is therefore inhibition of Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession

NP_009218.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[61253] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo- endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009220.1) is another GAM8554 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:10848, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61254] Another function of GAM8554 is therefore inhibition of Membrane metallo- endopeptidase (neutral endopepti-

dase, enkephalinase, calla, cd10) (MME, Accession NP_009220.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[61255] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo- endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1) is another GAM8554 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:10848, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61256] Another function of GAM8554 is therefore inhibition of

Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1), a gene which is thermolysin– like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[61257] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1) is another GAM8554 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:10848, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61258] Another function of GAM8554 is therefore inhibition of Membrane metallo–endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1), a gene which is thermolysin– like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[61259] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Msh homeo box homolog 2 (drosophila) (MSX2, Accession NP_002440.2) is another GAM8554 target gene, herein designated TARGET GENE. MSX2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MSX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSX2 BINDING SITE, designated SEQ ID:14467, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61260] Another function of GAM8554 is therefore inhibition of Msh homeo box homolog 2 (drosophila) (MSX2, Accession NP_002440.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSX2.

[61261] C-myc binding protein (MYCBP, Accession NP_036465.1) is another GAM8554 target gene, herein designated TARGET GENE. MYCBP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYCBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYCBP BINDING SITE, designated SEQ ID:6531, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61262] Another function of GAM8554 is therefore inhibition of C-myc binding protein (MYCBP, Accession NP_036465.1), a gene which binds c- Myc stimulating the activation of E-box- dependent transcription. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYCBP.

[61263] The function of MYCBP and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM378.2. Neuroligin 4 (NLGN4, Accession NP_065793.1) is another GAM8554 target gene, herein designated TARGET GENE. NLGN4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by NLGN4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NLGN4 BINDING SITE, designated SEQ ID:425, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61264] Another function of GAM8554 is therefore inhibition of Neuroligin 4 (NLGN4, Accession NP_065793.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLGN4.

[61265] Neuroligin 4 (NLGN4, Accession NP_851849.1) is another GAM8554 target gene, herein designated TARGET GENE. NLGN4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by NLGN4, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NLGN4 BINDING SITE, designated SEQ ID:425, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61266] Another function of GAM8554 is therefore inhibition of Neuroligin 4 (NLGN4, Accession NP_851849.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLGN4.

[61267] P5326 (Accession NP_113638.1) is another GAM8554 target gene, herein designated TARGET GENE. P5326 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by P5326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P5326 BINDING SITE, designated SEQ ID:7667, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61268] Another function of GAM8554 is therefore inhibition of P5326 (Accession NP_113638.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with P5326.

[61269] PACAP (Accession NP_057543.1) is another GAM8554 target gene, herein designated TARGET GENE. PACAP BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PACAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PACAP BINDING SITE, designated SEQ ID:19792, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61270] Another function of GAM8554 is therefore inhibition of PACAP (Accession NP_057543.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PACAP.

[61271] Programmed cell death 2 (PDCD2, Accession NP_659005.1) is another GAM8554 target gene, herein designated TARGET GENE. PDCD2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PDCD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PDCD2 BINDING SITE, designated SEQ ID:11383, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61272] Another function of GAM8554 is therefore inhibition of Programmed cell death 2 (PDCD2, Accession NP_659005.1), a gene which may be a dna- binding protein with a regulatory function. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDCD2.

[61273] The function of PDCD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM451.1.PEPP3 (Accession NP_055750.1) is another GAM8554 target gene, herein designated TARGET GENE. PEPP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PEPP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEPP3 BINDING SITE, designated SEQ ID:1056, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61274] Another function of GAM8554 is therefore inhibition of

PEPP3 (Accession NP_055750.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEPP3.

[61275] Phosphatidylserine decarboxylase (PISD, Accession NP_055153.1) is another GAM8554 target gene, herein designated TARGET GENE. PISD BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PISD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PISD BINDING SITE, designated SEQ ID:1719, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61276] Another function of GAM8554 is therefore inhibition of Phosphatidylserine decarboxylase (PISD, Accession NP_055153.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PISD.

[61277] PLPL (Accession NP_064566.1) is another GAM8554 target gene, herein designated TARGET GENE. PLPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLPL, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLPL BINDING SITE, designated SEQ ID:5391, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61278] Another function of GAM8554 is therefore inhibition of PLPL (Accession NP_064566.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLPL.

[61279] Plexin b1 (PLXNB1, Accession NP_002664.1) is another GAM8554 target gene, herein designated TARGET GENE. PLXNB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLXNB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLXNB1 BINDING SITE, designated SEQ ID:15214, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61280] Another function of GAM8554 is therefore inhibition of Plexin b1 (PLXNB1, Accession NP_002664.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with PLXNB1.

[61281] Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) is another GAM8554 target gene, herein designated TARGET GENE. PPARD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPARD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPARD BINDING SITE, designated SEQ ID:5618, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61282] Another function of GAM8554 is therefore inhibition of Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPARD.

[61283] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) is another GAM8554 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded

by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:18026, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61284] Another function of GAM8554 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[61285] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) is another GAM8554 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:18026, to the nucleotide sequence of GAM8554

RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61286] Another function of GAM8554 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[61287] Protein kinase, camp-dependent, catalytic, beta (PRKACB, Accession NP_002722.1) is another GAM8554 target gene, herein designated TARGET GENE. PRKACB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRKACB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKACB BINDING SITE, designated SEQ ID:19320, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61288] Another function of GAM8554 is therefore inhibition of Protein kinase, camp-dependent, catalytic, beta (PRKACB, Accession NP_002722.1), a gene which is the catalytic beta subunit of cAMP- dependent protein kinase (PKA).

Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKACB.

[61289] The function of PRKACB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.2.ProSAPiP1 (Accession NP_055546.1) is another GAM8554 target gene, herein designated TARGET GENE. ProSAPiP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ProSAPiP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ProSAPiP1 BINDING SITE, designated SEQ ID:13653, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61290] Another function of GAM8554 is therefore inhibition of ProSAPiP1 (Accession NP_055546.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ProSAPiP1.

[61291] PRTD-NY3 (Accession NP_112186.2) is another GAM8554

target gene, herein designated TARGET GENE. PRTD-NY3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRTD-NY3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRTD-NY3 BINDING SITE, designated SEQ ID:13126, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61292] Another function of GAM8554 is therefore inhibition of PRTD-NY3 (Accession NP_112186.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRTD-NY3.

[61293] Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) is another GAM8554 target gene, herein designated TARGET GENE. PTPRT BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTPRT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE, designated SEQ ID:17911, to the nu-

cleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61294] Another function of GAM8554 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[61295] Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_008981.2) is another GAM8554 target gene, herein designated TARGET GENE. PTPRT BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTPRT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE, designated SEQ ID:17911, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61296] Another function of GAM8554 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_008981.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[61297] RAB11-FIP4 (Accession NP_116321.2) is another GAM8554 target gene, herein designated TARGET GENE. RAB11-FIP4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB11-FIP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB11-FIP4 BINDING SITE, designated SEQ ID:5886, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61298] Another function of GAM8554 is therefore inhibition of RAB11-FIP4 (Accession NP_116321.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB11-FIP4.

[61299] Receptor (calcitonin) activity modifying protein 3 (RAMP3, Accession NP_005847.1) is another GAM8554 target gene, herein designated TARGET GENE. RAMP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of RAMP3 BINDING SITE, designated SEQ ID:19598, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61300] Another function of GAM8554 is therefore inhibition of Receptor (calcitonin) activity modifying protein 3 (RAMP3, Accession NP_005847.1), a gene which is required to transport calcitonin- receptor- like receptor (crlr) to the plasma membrane. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAMP3.

[61301] The function of RAMP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM625.1.Regulator of g-protein signalling 16 (RGS16, Accession NP_002919.1) is another GAM8554 target gene, herein designated TARGET GENE. RGS16 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RGS16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS16 BINDING SITE, designated SEQ ID:14356, to the nucleotide sequence of

GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61302] Another function of GAM8554 is therefore inhibition of Regulator of G-protein signalling 16 (RGS16, Accession NP_002919.1), a gene which inhibits signal transduction. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS16.

[61303] The function of RGS16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.1.RIS (Accession NP_057647.1) is another GAM8554 target gene, herein designated TARGET GENE. RIS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIS BINDING SITE, designated SEQ ID:4407, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61304] Another function of GAM8554 is therefore inhibition of RIS (Accession NP_057647.1) . Accordingly, utilities of

GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIS.

[61305] Rna (guanine-7-) methyltransferase (RNMT, Accession NP_003790.1) is another GAM8554 target gene, herein designated TARGET GENE. RNMT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNMT BINDING SITE, designated SEQ ID:12208, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61306] Another function of GAM8554 is therefore inhibition of Rna (guanine-7-) methyltransferase (RNMT, Accession NP_003790.1), a gene which catalyzes the methylation of GpppN- at the guanine N7 position. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNMT.

[61307] The function of RNMT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.2.Receptor tyrosine kinase-like orphan recep-

tor 2 (ROR2, Accession NP_004551.2) is another GAM8554 target gene, herein designated TARGET GENE. ROR2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ROR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ROR2 BINDING SITE, designated SEQ ID:6454, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61308] Another function of GAM8554 is therefore inhibition of Receptor tyrosine kinase-like orphan receptor 2 (ROR2, Accession NP_004551.2), a gene which may be involved in the early formation of the chondrocytes. and therefore is associated with Robinow syndrome, autosomal recessive ;brachydactyly, type. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of Robinow syndrome, autosomal recessive ;brachydactyly, type, and of other diseases and clinical conditions associated with ROR2.

[61309] The function of ROR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM500.2.RP4-622L5 (Accession NP_061991.2) is another GAM8554 target gene, herein designated TARGET GENE. RP4-622L5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RP4-622L5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP4-622L5 BINDING SITE, designated SEQ ID:7263, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61310] Another function of GAM8554 is therefore inhibition of RP4-622L5 (Accession NP_061991.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP4-622L5.

[61311] Retinoschisis (x-linked, juvenile) 1 (RS1, Accession NP_000321.1) is another GAM8554 target gene, herein designated TARGET GENE. RS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of RS1 BINDING SITE, designated SEQ ID:17639, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

- [61312] Another function of GAM8554 is therefore inhibition of Retinoschisis (x-linked, juvenile) 1 (RS1, Accession NP_000321.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RS1.
- [61313] S164 (Accession XP_027330.5) is another GAM8554 target gene, herein designated TARGET GENE. S164 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by S164, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S164 BINDING SITE, designated SEQ ID:15155, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.
- [61314] Another function of GAM8554 is therefore inhibition of S164 (Accession XP_027330.5) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with S164.

[61315] Squamous cell carcinoma antigen recognised by t cells 3 (SART3, Accession NP_055521.1) is another GAM8554 target gene, herein designated TARGET GENE. SART3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SART3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SART3 BINDING SITE, designated SEQ ID:16857, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61316] Another function of GAM8554 is therefore inhibition of Squamous cell carcinoma antigen recognised by t cells 3 (SART3, Accession NP_055521.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SART3.

[61317] SBZF3 (Accession NP_065127.2) is another GAM8554 target gene, herein designated TARGET GENE. SBZF3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SBZF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of SBZF3 BINDING SITE, designated SEQ ID:420, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61318] Another function of GAM8554 is therefore inhibition of SBZF3 (Accession NP_065127.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBZF3.

[61319] SBZF3 (Accession XP_300732.1) is another GAM8554 target gene, herein designated TARGET GENE. SBZF3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SBZF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBZF3 BINDING SITE, designated SEQ ID:420, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61320] Another function of GAM8554 is therefore inhibition of SBZF3 (Accession XP_300732.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBZF3.

[61321] Sodium channel, voltage-gated, type iv, beta polypeptide (SCN4B, Accession NP_777594.1) is another GAM8554

target gene, herein designated TARGET GENE. SCN4B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SCN4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN4B BINDING SITE, designated SEQ ID:6820, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61322] Another function of GAM8554 is therefore inhibition of Sodium channel, voltage-gated, type iv, beta polypeptide (SCN4B, Accession NP_777594.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN4B.

[61323] Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) is another GAM8554 target gene, herein designated TARGET GENE. SDC3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SDC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDC3 BINDING SITE, designated SEQ ID:13246, to the nucleotide sequence of GAM8554 RNA,

herein designated GAM RNA, also designated SEQ ID:388.

[61324] Another function of GAM8554 is therefore inhibition of Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDC3.

[61325] SFMBT (Accession NP_057413.1) is another GAM8554 target gene, herein designated TARGET GENE. SFMBT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SFMBT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFMBT BINDING SITE, designated SEQ ID:18612, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61326] Another function of GAM8554 is therefore inhibition of SFMBT (Accession NP_057413.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFMBT.

[61327] Sh3-domain grb2-like 2 (SH3GL2, Accession NP_003017.1) is another GAM8554 target gene, herein designated TARGET GENE. SH3GL2 BINDING SITE is a tar-

get binding site found in the 3' untranslated region of mRNA encoded by SH3GL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3GL2 BINDING SITE, designated SEQ ID:1385, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61328] Another function of GAM8554 is therefore inhibition of Sh3-domain grb2-like 2 (SH3GL2, Accession NP_003017.1), a gene which plays a role in synaptic vesicle recycling, in particular in clathrin-mediated vesicle endocytosis. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3GL2.

[61329] The function of SH3GL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM513.1. Signal-induced proliferation-associated gene 1 (SIPA1, Accession NP_694985.28) is another GAM8554 target gene, herein designated TARGET GENE. SIPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA en-

coded by SIPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIPA1 BINDING SITE, designated SEQ ID:4806, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61330] Another function of GAM8554 is therefore inhibition of Signal-induced proliferation-associated gene 1 (SIPA1, Accession NP_694985.28) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIPA1.

[61331] Signal-induced proliferation-associated gene 1 (SIPA1, Accession NP_006738.2) is another GAM8554 target gene, herein designated TARGET GENE. SIPA1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SIPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIPA1 BINDING SITE, designated SEQ ID:4806, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61332] Another function of GAM8554 is therefore inhibition of Signal-induced proliferation-associated gene 1 (SIPA1, Accession NP_006738.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIPA1.

[61333] Solute carrier family 20 (phosphate transporter), member 1 (SLC20A1, Accession NP_005406.3) is another GAM8554 target gene, herein designated TARGET GENE. SLC20A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC20A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC20A1 BINDING SITE, designated SEQ ID:17340, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61334] Another function of GAM8554 is therefore inhibition of Solute carrier family 20 (phosphate transporter), member 1 (SLC20A1, Accession NP_005406.3), a gene which could be a sodium- phosphate symporter. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC20A1.

[61335] The function of SLC20A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM391.1. Solute carrier family 25 (mitochondrial carrier; peroxisomal membrane protein, 34kda), member 17 (SLC25A17, Accession NP_006349.1) is another GAM8554 target gene, herein designated TARGET GENE. SLC25A17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC25A17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC25A17 BINDING SITE, designated SEQ ID:2699, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61336] Another function of GAM8554 is therefore inhibition of Solute carrier family 25 (mitochondrial carrier; peroxisomal membrane protein, 34kda), member 17 (SLC25A17, Accession NP_006349.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC25A17.

[61337] Swi/snf related, matrix associated, actin dependent regu-

lator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_060920.4) is another GAM8554 target gene, herein designated TARGET GENE. SMARCF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SMARCF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCF1 BINDING SITE, designated SEQ ID:11978, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61338] Another function of GAM8554 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_060920.4) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCF1.

[61339] SPBPBP (Accession NP_006683.1) is another GAM8554 target gene, herein designated TARGET GENE. SPBPBP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SPBPBP, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPBPBP BINDING SITE, designated SEQ ID:9243, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61340] Another function of GAM8554 is therefore inhibition of SPBPBP (Accession NP_006683.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPBPBP.

[61341] Synaptojanin 2 (SYNJ2, Accession NP_003889.1) is another GAM8554 target gene, herein designated TARGET GENE. SYNJ2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SYNJ2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYNJ2 BINDING SITE, designated SEQ ID:7330, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61342] Another function of GAM8554 is therefore inhibition of Synaptojanin 2 (SYNJ2, Accession NP_003889.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with SYNJ2.

[61343] Treacher collins-franceschetti syndrome 1 (TCOF1, Accession NP_000347.1) is another GAM8554 target gene, herein designated TARGET GENE. TCOF1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TCOF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCOF1 BINDING SITE, designated SEQ ID:1511, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61344] Another function of GAM8554 is therefore inhibition of Treacher collins-franceschetti syndrome 1 (TCOF1, Accession NP_000347.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCOF1.

[61345] Transforming growth factor, beta 3 (TGFB3, Accession NP_003230.1) is another GAM8554 target gene, herein designated TARGET GENE. TGFB3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TGFB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGFB3 BINDING SITE, designated SEQ ID:3958, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61346] Another function of GAM8554 is therefore inhibition of Transforming growth factor, beta 3 (TGFB3, Accession NP_003230.1), a gene which is involved in embryogenesis and cell differentiation. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGFB3.

[61347] The function of TGFB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM483.1.TOLLIP (Accession NP_061882.2) is another GAM8554 target gene, herein designated TARGET GENE. TOLLIP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TOLLIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOLLIP BINDING SITE, designated SEQ ID:1045, to the nucleotide sequence of GAM8554 RNA, herein designated

GAM RNA, also designated SEQ ID:388.

[61348] Another function of GAM8554 is therefore inhibition of TOLLIP (Accession NP_061882.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOLLIP.

[61349] TU3A (Accession NP_009108.1) is another GAM8554 target gene, herein designated TARGET GENE. TU3A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TU3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU3A BINDING SITE, designated SEQ ID:17216, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61350] Another function of GAM8554 is therefore inhibition of TU3A (Accession NP_009108.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU3A.

[61351] Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1) is another GAM8554 target gene, herein designated TARGET GENE. UGDH BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by UGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGDH BINDING SITE, designated SEQ ID:18136, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61352] Another function of GAM8554 is therefore inhibition of Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1), a gene which is an UDP- glucose dehydrogenase. Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGDH.

[61353] The function of UGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Unc-84 homolog a (c. elegans) (UNC84A, Accession XP_291219.1) is another GAM8554 target gene, herein designated TARGET GENE. UNC84A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UNC84A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of UNC84A BINDING SITE, designated SEQ ID:4603, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61354] Another function of GAM8554 is therefore inhibition of Unc-84 homolog a (c. elegans) (UNC84A, Accession XP_291219.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC84A.

[61355] URF2 (Accession NP_689519.2) is another GAM8554 target gene, herein designated TARGET GENE. URF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by URF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of URF2 BINDING SITE, designated SEQ ID:2555, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61356] Another function of GAM8554 is therefore inhibition of URF2 (Accession NP_689519.2) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with URF2.

[61357] VprBP (Accession NP_055518.1) is another GAM8554 target gene, herein designated TARGET GENE. VprBP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VprBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VprBP BINDING SITE, designated SEQ ID:5213, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61358] Another function of GAM8554 is therefore inhibition of VprBP (Accession NP_055518.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VprBP.

[61359] WDFY1 (Accession NP_065881.1) is another GAM8554 target gene, herein designated TARGET GENE. WDFY1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDFY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDFY1 BINDING SITE, designated SEQ ID:18013, to the nucleotide sequence of GAM8554

RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61360] Another function of GAM8554 is therefore inhibition of WDFY1 (Accession NP_065881.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDFY1.

[61361] WDFY1 (Accession NP_848127.1) is another GAM8554 target gene, herein designated TARGET GENE. WDFY1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDFY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDFY1 BINDING SITE, designated SEQ ID:18013, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61362] Another function of GAM8554 is therefore inhibition of WDFY1 (Accession NP_848127.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDFY1.

[61363] WFDC10B (Accession NP_742143.1) is another GAM8554 target gene, herein designated TARGET GENE. WFDC10B

BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WFDC10B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WFDC10B BINDING SITE, designated SEQ ID:7903, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61364] Another function of GAM8554 is therefore inhibition of WFDC10B (Accession NP_742143.1). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WFDC10B.

[61365] WFDC10B (Accession NP_742003.1) is another GAM8554 target gene, herein designated TARGET GENE. WFDC10B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WFDC10B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WFDC10B BINDING SITE, designated SEQ ID:7903, to the nucleotide sequence of GAM8554

RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61366] Another function of GAM8554 is therefore inhibition of WFDC10B (Accession NP_742003.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WFDC10B.

[61367] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1) is another GAM8554 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:16764, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61368] Another function of GAM8554 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of

GAM8554 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61369] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Zinc finger protein 91 homolog (mouse) (ZFP91, Accession NP_739574.1) is another GAM8554 target gene, herein designated TARGET GENE. ZFP91 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZFP91, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP91 BINDING SITE, designated SEQ ID:19190, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61370] Another function of GAM8554 is therefore inhibition of Zinc finger protein 91 homolog (mouse) (ZFP91, Accession NP_739574.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP91.

[61371] Zinc finger protein 124 (hzf-16) (ZNF124, Accession NP_003422.1) is another GAM8554 target gene, herein designated TARGET GENE. ZNF124 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ZNF124, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF124 BINDING SITE, designated SEQ ID:18483, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61372] Another function of GAM8554 is therefore inhibition of Zinc finger protein 124 (hzf-16) (ZNF124, Accession NP_003422.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF124.

[61373] Zinc finger protein 239 (ZNF239, Accession NP_005665.1) is another GAM8554 target gene, herein designated TARGET GENE. ZNF239 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ZNF239, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of ZNF239 BINDING SITE, designated SEQ ID:13975, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61374] Another function of GAM8554 is therefore inhibition of Zinc finger protein 239 (ZNF239, Accession NP_005665.1) . Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF239.

[61375] Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) is another GAM8554 target gene, herein designated TARGET GENE. ZNF289 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF289 BINDING SITE, designated SEQ ID:14798, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61376] Another function of GAM8554 is therefore inhibition of Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) . Accordingly, utilities of GAM8554 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF289.

[61377] Zinc finger protein 297 (ZNF297, Accession NP_005444.3) is another GAM8554 target gene, herein designated TARGET GENE. ZNF297 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF297, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF297 BINDING SITE, designated SEQ ID:17593, to the nucleotide sequence of GAM8554 RNA, herein designated GAM RNA, also designated SEQ ID:388.

[61378] Another function of GAM8554 is therefore inhibition of Zinc finger protein 297 (ZNF297, Accession NP_005444.3). Accordingly, utilities of GAM8554 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF297.

[61379]

[61380] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 8678 (GAM8678), which modulates expression of respective

target genes thereof, the function and utility of which target genes is known in the art.

[61381] GAM8678 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM8678 was detected is described hereinabove with reference to Figs. 8–15.

[61382] GAM8678 gene, herein designated GAM GENE, and GAM8678 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[61383] GAM8678 gene encodes a GAM8678 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM8678 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM8678 precursor RNA is designated SEQ ID:11, and is provided hereinbelow with reference to the sequence listing part.

[61384] GAM8678 precursor RNA folds onto itself, forming GAM8678 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence

of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[61385] GAM8678 precursor RNA folds onto itself, forming GAM8678 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[61386] Nucleotide sequence of GAM8678 precursor RNA, designated SEQ-ID: 11, and a schematic representation of a predicted secondary folding of GAM8678 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[61387] An enzyme complex designated DICER COMPLEX, `dices` the GAM8678 folded precursor RNA into GAM8678 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM8678 RNA is designated SEQ ID:347, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[61388] GAM8678 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM8678 target RNA, herein designated GAM TARGET RNA. GAM8678 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5' untranslated region, a protein coding region and a 3' untranslated region, designated 5'UTR, PROTEIN CODING and 3'UTR respectively.

[61389] GAM8678 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM8678 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM8678 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated

that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM8678 RNA may have a different number of target binding sites in untranslated regions of a GAM8678 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only these target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[61390] The complementary binding of GAM8678 RNA, herein designated GAM RNA, to target binding sites on GAM8678 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM8678 target RNA into GAM8678 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[61391] It is appreciated that GAM8678 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM8678 target genes. The mRNA of each one of this plurality of GAM8678 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM8678 RNA, herein designated GAM RNA, and which when bound by

GAM8678 RNA causes inhibition of translation of respective one or more GAM8678 target proteins.

[61392] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM8678 gene, herein designated GAM GENE, on one or more GAM8678 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[61393] It is appreciated that specific functions and accordingly utilities of GAM8678 correlate with, and may be deduced from, the identity of the target genes which GAM8678 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[61394]

[61395]

[61396] Atp-binding cassette, sub-family a (abc1), member 4 (ABCA4, Accession NP_000341.1) is a GAM8678 target gene, herein designated TARGET GENE. ABCA4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ABCA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCA4 BINDING SITE, designated SEQ ID:14902, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61397] A function of GAM8678 is therefore inhibition of Atp-binding cassette, sub-family a (abc1), member 4 (ABCA4, Accession NP_000341.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCA4.

[61398] Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM8678 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3' untranslated region of multi-

ple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:11743, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61399] Another function of GAM8678 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which a calmodulin-sensitive adenylyl cyclase. it may play a role in memory acquisition and learning. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[61400] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1. Alanine-glyoxylate aminotransferase (oxalosis i; hyperoxaluria i; glycolicaciduria; serine-pyruvate aminotransferase) (AGXT, Accession NP_000021.1) is another GAM8678 target gene, herein designated TARGET GENE. AGXT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by AGXT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGXT BINDING SITE, designated SEQ ID:15028, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61401] Another function of GAM8678 is therefore inhibition of Alanine-glyoxylate aminotransferase (oxalosis i; hyperoxaluria i; glycolicaciduria; serine-pyruvate aminotransferase) (AGXT, Accession NP_000021.1), a gene which referred to the a enzyme is expressed only in the liver. and therefore is associated with Primary hyperoxaluria type i (ph1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Primary hyperoxaluria type i (ph1), and of other diseases and clinical conditions associated with AGXT.

[61402] The function of AGXT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM929.2.S-adenosylmethionine decarboxylase 1 (AMD1, Accession NP_001625.1) is another GAM8678 target gene, herein designated TARGET GENE. AMD1 BIND-

ING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AMD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMD1 BINDING SITE, designated SEQ ID:8863, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61403] Another function of GAM8678 is therefore inhibition of S-adenosylmethionine decarboxylase 1 (AMD1, Accession NP_001625.1), a gene which catalyzes the removal of the carboxylate group of S-adenosylmethionine in the polyamine biosynthesis pathway. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMD1.

[61404] The function of AMD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM100.1. ANKRD10 (Accession NP_060134.1) is another GAM8678 target gene, herein designated TARGET GENE. ANKRD10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ANKRD10, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKRD10 BINDING SITE, designated SEQ ID:2626, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61405] Another function of GAM8678 is therefore inhibition of ANKRD10 (Accession NP_060134.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKRD10.

[61406] Ankyrin-like with transmembrane domains 1 (ANKTM1, Accession NP_015628.1) is another GAM8678 target gene, herein designated TARGET GENE. ANKTM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ANKTM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKTM1 BINDING SITE, designated SEQ ID:18718, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61407] Another function of GAM8678 is therefore inhibition of

Ankyrin-like with transmembrane domains 1 (ANKTM1, Accession NP_015628.1), a gene which attaches integral membrane proteins to cytoskeletal elements. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKTM1.

[61408] The function of ANKTM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1.APOB48R (Accession NP_061160.1) is another GAM8678 target gene, herein designated TARGET GENE. APOB48R BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by APOB48R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOB48R BINDING SITE, designated SEQ ID:14532, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61409] Another function of GAM8678 is therefore inhibition of APOB48R (Accession NP_061160.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with APOB48R.

[61410] Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) is another GAM8678 target gene, herein designated TARGET GENE. ATP7A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ATP7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7A BINDING SITE, designated SEQ ID:14456, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61411] Another function of GAM8678 is therefore inhibition of Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7A.

[61412] Bone morphogenetic protein 1 (BMP1, Accession NP_006122.1) is another GAM8678 target gene, herein designated TARGET GENE. BMP1 BINDING SITE is a target binding site found in the 3' untranslated region of multi-

ple transcripts of mRNA encoded by BMP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMP1 BINDING SITE, designated SEQ ID:18997, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61413] Another function of GAM8678 is therefore inhibition of Bone morphogenetic protein 1 (BMP1, Accession NP_006122.1), a gene which cleaves procollagens leading to formation of extracellular matrix. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMP1.

[61414] The function of BMP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1. Bone morphogenetic protein 1 (BMP1, Accession NP_006123.1) is another GAM8678 target gene, herein designated TARGET GENE. BMP1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BMP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of BMP1 BINDING SITE, designated SEQ ID:18997, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

- [61415] Another function of GAM8678 is therefore inhibition of Bone morphogenetic protein 1 (BMP1, Accession NP_006123.1), a gene which cleaves procollagens leading to formation of extracellular matrix. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMP1.
- [61416] The function of BMP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1. Breast cancer 1, early onset (BRCA1, Accession NP_009230.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated

GAM RNA, also designated SEQ ID:347.

[61417] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009230.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61418] Breast cancer 1, early onset (BRCA1, Accession NP_009225.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61419] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009225.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61420] Breast cancer 1, early onset (BRCA1, Accession

NP_009235.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61421] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009235.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61422] Breast cancer 1, early onset (BRCA1, Accession NP_009227.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61423] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009227.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61424] Breast cancer 1, early onset (BRCA1, Accession NP_009236.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61425] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009236.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with BRCA1.

[61426] Breast cancer 1, early onset (BRCA1, Accession NP_009231.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61427] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009231.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61428] Breast cancer 1, early onset (BRCA1, Accession NP_009233.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61429] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009233.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61430] Breast cancer 1, early onset (BRCA1, Accession NP_009229.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61431] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession

NP_009229.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61432] Breast cancer 1, early onset (BRCA1, Accession NP_009232.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61433] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009232.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61434] Breast cancer 1, early onset (BRCA1, Accession NP_009237.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5` untranslated region of multi-

ple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61435] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009237.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61436] Breast cancer 1, early onset (BRCA1, Accession NP_009234.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61437] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009234.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61438] Breast cancer 1, early onset (BRCA1, Accession NP_009228.1) is another GAM8678 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:16053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61439] Another function of GAM8678 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009228.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[61440] C14orf73 (Accession XP_040910.3) is another GAM8678 target gene, herein designated TARGET GENE. C14orf73

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C14orf73, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf73 BINDING SITE, designated SEQ ID:1099, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61441] Another function of GAM8678 is therefore inhibition of C14orf73 (Accession XP_040910.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf73.

[61442] Chromosome 20 open reading frame 142 (C20orf142, Accession XP_300782.1) is another GAM8678 target gene, herein designated TARGET GENE. C20orf142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf142 BINDING SITE, designated SEQ ID:14457, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA,

also designated SEQ ID:347.

[61443] Another function of GAM8678 is therefore inhibition of Chromosome 20 open reading frame 142 (C20orf142, Accession XP_300782.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf142.

[61444] Chromosome 20 open reading frame 155 (C20orf155, Accession NP_061968.1) is another GAM8678 target gene, herein designated TARGET GENE. C20orf155 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C20orf155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf155 BINDING SITE, designated SEQ ID:13151, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61445] Another function of GAM8678 is therefore inhibition of Chromosome 20 open reading frame 155 (C20orf155, Accession NP_061968.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf155.

[61446] Chromosome 21 open reading frame 81 (C21orf81, Ac-

cession NP_715631.1) is another GAM8678 target gene, herein designated TARGET GENE. C21orf81 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C21orf81, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf81 BINDING SITE, designated SEQ ID:14253, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61447] Another function of GAM8678 is therefore inhibition of Chromosome 21 open reading frame 81 (C21orf81, Accession NP_715631.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf81.

[61448] Chromosome 4 open reading frame 6 (C4orf6, Accession NP_005741.1) is another GAM8678 target gene, herein designated TARGET GENE. C4orf6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C4orf6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C4orf6 BINDING SITE, designated

SEQ ID:2254, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61449] Another function of GAM8678 is therefore inhibition of Chromosome 4 open reading frame 6 (C4orf6, Accession NP_005741.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C4orf6.

[61450] Chromosome 5 open reading frame 5 (C5orf5, Accession NP_057687.1) is another GAM8678 target gene, herein designated TARGET GENE. C5orf5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C5orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf5 BINDING SITE, designated SEQ ID:19983, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61451] Another function of GAM8678 is therefore inhibition of Chromosome 5 open reading frame 5 (C5orf5, Accession NP_057687.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with C5orf5.

[61452] Chromosome 5 open reading frame 6 (C5orf6, Accession NP_057689.1) is another GAM8678 target gene, herein designated TARGET GENE. C5orf6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C5orf6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf6 BINDING SITE, designated SEQ ID:5117, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61453] Another function of GAM8678 is therefore inhibition of Chromosome 5 open reading frame 6 (C5orf6, Accession NP_057689.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf6.

[61454] Caspase recruitment domain family, member 15 (CARD15, Accession NP_071445.1) is another GAM8678 target gene, herein designated TARGET GENE. CARD15 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CARD15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD15 BINDING SITE, designated SEQ ID:7952, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61455] Another function of GAM8678 is therefore inhibition of Caspase recruitment domain family, member 15 (CARD15, Accession NP_071445.1), a gene which serves as an intracellular receptor for bacterial products in monocytes and transduces signals leading to NFkB activation. and therefore is associated with Blau syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Blau syndrome, and of other diseases and clinical conditions associated with CARD15.

[61456] The function of CARD15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.Caspase recruitment domain family, member 9 (CARD9, Accession NP_434701.1) is another GAM8678 target gene, herein designated TARGET GENE. CARD9 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CARD9, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD9 BINDING SITE, designated SEQ ID:18998, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61457] Another function of GAM8678 is therefore inhibition of Caspase recruitment domain family, member 9 (CARD9, Accession NP_434701.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD9.

[61458] Caspase recruitment domain family, member 9 (CARD9, Accession NP_434700.1) is another GAM8678 target gene, herein designated TARGET GENE. CARD9 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CARD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD9 BINDING SITE, designated SEQ ID:18998, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61459] Another function of GAM8678 is therefore inhibition of

Caspase recruitment domain family, member 9 (CARD9, Accession NP_434700.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD9.

[61460] Caspase recruitment domain family, member 9 (CARD9, Accession NP_071747.2) is another GAM8678 target gene, herein designated TARGET GENE. CARD9 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CARD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD9 BINDING SITE, designated SEQ ID:18998, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61461] Another function of GAM8678 is therefore inhibition of Caspase recruitment domain family, member 9 (CARD9, Accession NP_071747.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD9.

[61462] Carbonyl reductase 1 (CBR1, Accession NP_001748.1) is another GAM8678 target gene, herein designated TARGET GENE. CBR1 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by CBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBR1 BINDING SITE, designated SEQ ID:3247, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61463] Another function of GAM8678 is therefore inhibition of Carbonyl reductase 1 (CBR1, Accession NP_001748.1), a gene which catalyze the reduction of a wide variety of carbonyl compounds including the antitumor anthracycline antibiotics. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBR1.

[61464] The function of CBR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.CDCP1 (Accession NP_073753.3) is another GAM8678 target gene, herein designated TARGET GENE. CDCP1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDCP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDCP1 BINDING SITE, designated SEQ ID:4987, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61465] Another function of GAM8678 is therefore inhibition of CDCP1 (Accession NP_073753.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDCP1.

[61466] Cyclin-dependent kinase inhibitor 2a (melanoma, p16, inhibits cdk4) (CDKN2A, Accession NP_478104.1) is another GAM8678 target gene, herein designated TARGET GENE. CDKN2A BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDKN2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKN2A BINDING SITE, designated SEQ ID:18494, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61467] Another function of GAM8678 is therefore inhibition of Cyclin-dependent kinase inhibitor 2a (melanoma, p16, in-

hibits cdk4) (CDKN2A, Accession NP_478104.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN2A.

[61468] Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_511042.1) is another GAM8678 target gene, herein designated TARGET GENE. CDKN2B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDKN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKN2B BINDING SITE, designated SEQ ID:18494, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61469] Another function of GAM8678 is therefore inhibition of Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_511042.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN2B.

[61470] Cerebellar degeneration-related protein 1, 34kda (CDR1,

Accession NP_004056.1) is another GAM8678 target gene, herein designated TARGET GENE. CDR1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CDR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDR1 BINDING SITE, designated SEQ ID:18037, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61471] Another function of GAM8678 is therefore inhibition of Cerebellar degeneration-related protein 1, 34kda (CDR1, Accession NP_004056.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDR1.

[61472] Carcinoembryonic antigen-related cell adhesion molecule 1 (biliary glycoprotein) (CEACAM1, Accession NP_001703.2) is another GAM8678 target gene, herein designated TARGET GENE. CEACAM1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CEACAM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CEACAM1 BINDING SITE, designated SEQ ID:13671, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61473] Another function of GAM8678 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 1 (biliary glycoprotein) (CEACAM1, Accession NP_001703.2), a gene which is a major effector of VEGF and may be a target for the inhibition of tumor angiogenesis. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM1.

[61474] The function of CEACAM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.2. Carcinoembryonic antigen-related cell adhesion molecule 5 (CEACAM5, Accession NP_004354.1) is another GAM8678 target gene, herein designated TARGET GENE. CEACAM5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CEACAM5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of CEACAM5 BINDING SITE, designated SEQ ID:12584, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61475] Another function of GAM8678 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 5 (CEACAM5, Accession NP_004354.1), a gene which is a complex immunoreactive glycoprotein and therefore may be associated with Liver metastasis. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Liver metastasis, and of other diseases and clinical conditions associated with CEACAM5.

[61476] The function of CEACAM5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Cgg triplet repeat binding protein 1 (CGGBP1, Accession NP_003654.2) is another GAM8678 target gene, herein designated TARGET GENE. CGGBP1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CGGBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CGGBP1 BINDING SITE, designated SEQ ID:14778, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61477] Another function of GAM8678 is therefore inhibition of Cgg triplet repeat binding protein 1 (CGGBP1, Accession NP_003654.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGGBP1.

[61478] Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 5 (CHST5, Accession NP_036258.1) is another GAM8678 target gene, herein designated TARGET GENE. CHST5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CHST5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHST5 BINDING SITE, designated SEQ ID:9412, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61479] Another function of GAM8678 is therefore inhibition of Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 5 (CHST5, Accession NP_036258.1), a gene which may be involved in sulfation of glycoproteins and proteoglycans.

Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST5.

[61480] The function of CHST5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1. Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 6 (CHST6, Accession NP_067628.1) is another GAM8678 target gene, herein designated TARGET GENE. CHST6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CHST6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHST6 BINDING SITE, designated SEQ ID:20149, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61481] Another function of GAM8678 is therefore inhibition of Carbohydrate (n-acetylglucosamine 6-o) sulfotransferase 6 (CHST6, Accession NP_067628.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST6.

[61482] Claudin 12 (CLDN12, Accession NP_036261.1) is another GAM8678 target gene, herein designated TARGET GENE. CLDN12 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CLDN12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN12 BINDING SITE, designated SEQ ID:8628, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61483] Another function of GAM8678 is therefore inhibition of Claudin 12 (CLDN12, Accession NP_036261.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN12.

[61484] Cannabinoid receptor 2 (macrophage) (CNR2, Accession NP_001832.1) is another GAM8678 target gene, herein designated TARGET GENE. CNR2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CNR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNR2 BINDING SITE, designated

SEQ ID:11056, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61485] Another function of GAM8678 is therefore inhibition of Cannabinoid receptor 2 (macrophage) (CNR2, Accession NP_001832.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNR2.

[61486] Collagen, type xvii, alpha 1 (COL17A1, Accession NP_000485.2) is another GAM8678 target gene, herein designated TARGET GENE. COL17A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by COL17A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL17A1 BINDING SITE, designated SEQ ID:6300, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61487] Another function of GAM8678 is therefore inhibition of Collagen, type xvii, alpha 1 (COL17A1, Accession NP_000485.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with COL17A1.

[61488] Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) is another GAM8678 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by COLEC12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE, designated SEQ ID:19564, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61489] Another function of GAM8678 is therefore inhibition of Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[61490] Collectin sub-family member 12 (COLEC12, Accession NP_569057.1) is another GAM8678 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by COLEC12, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE, designated SEQ ID:19564, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61491] Another function of GAM8678 is therefore inhibition of Collectin sub-family member 12 (COLEC12, Accession NP_569057.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[61492] Cellular repressor of e1a-stimulated genes (CREG, Accession NP_003842.1) is another GAM8678 target gene, herein designated TARGET GENE. CREG BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CREG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CREG BINDING SITE, designated SEQ ID:5534, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61493] Another function of GAM8678 is therefore inhibition of Cellular repressor of e1a-stimulated genes (CREG, Acces-

sion NP_003842.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CREG.

[61494] Cytochrome p450, subfamily ivb, polypeptide 1 (CYP4B1, Accession NP_000770.1) is another GAM8678 target gene, herein designated TARGET GENE. CYP4B1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYP4B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP4B1 BINDING SITE, designated SEQ ID:16905, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61495] Another function of GAM8678 is therefore inhibition of Cytochrome p450, subfamily ivb, polypeptide 1 (CYP4B1, Accession NP_000770.1), a gene which intervenes in an NADPH- dependent electron transport pathway. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP4B1.

[61496] The function of CYP4B1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM1035.1. Doublecortin; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) is another GAM8678 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:18999, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61497] Another function of GAM8678 is therefore inhibition of Doublecortin; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[61498] Doublecortin; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) is another GAM8678 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:18999, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61499] Another function of GAM8678 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[61500] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) is another GAM8678 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:18999, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61501] Another function of GAM8678 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin)

(DCX, Accession NP_835366.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[61502] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) is another GAM8678 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:18999, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61503] Another function of GAM8678 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[61504] Digeorge syndrome critical region gene 9 (DGCR9, Accession XP_097827.1) is another GAM8678 target gene, herein designated TARGET GENE. DGCR9 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by DGCR9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGCR9 BINDING SITE, designated SEQ ID:17341, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61505] Another function of GAM8678 is therefore inhibition of Digorge syndrome critical region gene 9 (DGCR9, Accession XP_097827.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DGCR9.

[61506] DKFZP434F0318 (Accession NP_110444.1) is another GAM8678 target gene, herein designated TARGET GENE. DKFZP434F0318 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434F0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE, designated SEQ ID:9302, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61507] Another function of GAM8678 is therefore inhibition of DKFZP434F0318 (Accession NP_110444.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F0318.

[61508] DKFZP434G1411 (Accession XP_166383.1) is another GAM8678 target gene, herein designated TARGET GENE. DKFZP434G1411 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434G1411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434G1411 BINDING SITE, designated SEQ ID:1085, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61509] Another function of GAM8678 is therefore inhibition of DKFZP434G1411 (Accession XP_166383.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434G1411.

[61510] DKFZP564C103 (Accession NP_056469.2) is another GAM8678 target gene, herein designated TARGET GENE.

DKFZP564C103 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564C103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564C103 BINDING SITE, designated SEQ ID:8255, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61511] Another function of GAM8678 is therefore inhibition of DKFZP564C103 (Accession NP_056469.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564C103.

[61512] DKFZP586M1120 (Accession NP_112584.1) is another GAM8678 target gene, herein designated TARGET GENE. DKFZP586M1120 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP586M1120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586M1120 BINDING SITE, designated SEQ ID:9451, to the nucleotide sequence of

GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61513] Another function of GAM8678 is therefore inhibition of DKFZP586M1120 (Accession NP_112584.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586M1120.

[61514] DKFZp667E0512 (Accession XP_117353.1) is another GAM8678 target gene, herein designated TARGET GENE. DKFZp667E0512 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp667E0512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667E0512 BINDING SITE, designated SEQ ID:4910, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61515] Another function of GAM8678 is therefore inhibition of DKFZp667E0512 (Accession XP_117353.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667E0512.

[61516] DKFZp761K1423 (Accession NP_060892.1) is another GAM8678 target gene, herein designated TARGET GENE. DKFZp761K1423 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp761K1423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761K1423 BINDING SITE, designated SEQ ID:16429, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61517] Another function of GAM8678 is therefore inhibition of DKFZp761K1423 (Accession NP_060892.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761K1423.

[61518] Dystrobrevin, alpha (DTNA, Accession NP_116763.1) is another GAM8678 target gene, herein designated TARGET GENE. DTNA BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by DTNA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of DTNA BINDING SITE, designated SEQ ID:7785, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61519] Another function of GAM8678 is therefore inhibition of Dystrobrevin, alpha (DTNA, Accession NP_116763.1), a gene which may be involved in the formation and stability of synapses. and therefore may be associated with Limb-girdle muscular dystrophy and congenital heart defects. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Limb-girdle muscular dystrophy and congenital heart defects., and of other diseases and clinical conditions associated with DTNA.

[61520] The function of DTNA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM492.2.Dystrobrevin, alpha (DTNA, Accession NP_116762.1) is another GAM8678 target gene, herein designated TARGET GENE. DTNA BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by DTNA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of DTNA BINDING SITE, designated SEQ ID:7785, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61521] Another function of GAM8678 is therefore inhibition of Dystrobrevin, alpha (DTNA, Accession NP_116762.1), a gene which may be involved in the formation and stability of synapses. and therefore may be associated with Limb-girdle muscular dystrophy and congenital heart defects. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Limb-girdle muscular dystrophy and congenital heart defects., and of other diseases and clinical conditions associated with DTNA.

[61522] The function of DTNA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM492.2.EAT2 (Accession NP_444512.1) is another GAM8678 target gene, herein designated TARGET GENE. EAT2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EAT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

EAT2 BINDING SITE, designated SEQ ID:9613, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61523] Another function of GAM8678 is therefore inhibition of EAT2 (Accession NP_444512.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EAT2.

[61524] Ephrin-a5 (EFNA5, Accession NP_001953.1) is another GAM8678 target gene, herein designated TARGET GENE. EFNA5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EFNA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EFNA5 BINDING SITE, designated SEQ ID:2962, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61525] Another function of GAM8678 is therefore inhibition of Ephrin-a5 (EFNA5, Accession NP_001953.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EFNA5.

[61526] E1a binding protein p300 (EP300, Accession

NP_001420.1) is another GAM8678 target gene, herein designated TARGET GENE. EP300 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EP300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EP300 BINDING SITE, designated SEQ ID:5735, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61527] Another function of GAM8678 is therefore inhibition of E1a binding protein p300 (EP300, Accession NP_001420.1), a gene which may have a function in cell cycle regulation. and therefore may be associated with Colorectal cancer. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Colorectal cancer, and of other diseases and clinical conditions associated with EP300.

[61528] The function of EP300 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.Coagulation factor xiii, a1 polypeptide (F13A1, Accession NP_000120.1) is another GAM8678

target gene, herein designated TARGET GENE. F13A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by F13A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F13A1 BINDING SITE, designated SEQ ID:5593, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61529] Another function of GAM8678 is therefore inhibition of Coagulation factor xiii, a1 polypeptide (F13A1, Accession NP_000120.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F13A1.

[61530] Ferm, rhogef (arhgef) and pleckstrin domain protein 1 (chondrocyte-derived) (FARP1, Accession NP_005757.1) is another GAM8678 target gene, herein designated TARGET GENE. FARP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FARP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FARP1 BINDING SITE, designated SEQ

ID:14652, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61531] Another function of GAM8678 is therefore inhibition of Ferm, rhogef (arhgef) and pleckstrin domain protein 1 (chondrocyte-derived) (FARP1, Accession NP_005757.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FARP1.

[61532] FLJ00103 (Accession XP_036104.5) is another GAM8678 target gene, herein designated TARGET GENE. FLJ00103 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ00103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00103 BINDING SITE, designated SEQ ID:4563, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61533] Another function of GAM8678 is therefore inhibition of FLJ00103 (Accession XP_036104.5) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00103.

[61534] FLJ00225 (Accession XP_084552.3) is another GAM8678 target gene, herein designated TARGET GENE. FLJ00225 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ00225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00225 BINDING SITE, designated SEQ ID:19498, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61535] Another function of GAM8678 is therefore inhibition of FLJ00225 (Accession XP_084552.3). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00225.

[61536] FLJ10290 (Accession NP_060517.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ10290 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10290 BINDING SITE, designated SEQ ID:15918, to the

nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61537] Another function of GAM8678 is therefore inhibition of FLJ10290 (Accession NP_060517.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10290.

[61538] FLJ10496 (Accession NP_060584.2) is another GAM8678 target gene, herein designated TARGET GENE. FLJ10496 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10496, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10496 BINDING SITE, designated SEQ ID:2494, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61539] Another function of GAM8678 is therefore inhibition of FLJ10496 (Accession NP_060584.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10496.

[61540] FLJ11301 (Accession NP_060855.1) is another GAM8678

target gene, herein designated TARGET GENE. FLJ11301 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11301, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11301 BINDING SITE, designated SEQ ID:6745, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61541] Another function of GAM8678 is therefore inhibition of FLJ11301 (Accession NP_060855.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11301.

[61542] FLJ11871 (Accession NP_079393.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ11871 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11871, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11871 BINDING SITE, designated SEQ ID:4130, to the nucleotide sequence of GAM8678 RNA, herein designated

GAM RNA, also designated SEQ ID:347.

[61543] Another function of GAM8678 is therefore inhibition of FLJ11871 (Accession NP_079393.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11871.

[61544] FLJ12476 (Accession NP_073621.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ12476 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12476, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12476 BINDING SITE, designated SEQ ID:17053, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61545] Another function of GAM8678 is therefore inhibition of FLJ12476 (Accession NP_073621.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12476.

[61546] FLJ13197 (Accession NP_078890.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ13197

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13197 BINDING SITE, designated SEQ ID:9668, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61547] Another function of GAM8678 is therefore inhibition of FLJ13197 (Accession NP_078890.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13197.

[61548] FLJ13744 (Accession NP_079287.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ13744 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13744 BINDING SITE, designated SEQ ID:7904, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61549] Another function of GAM8678 is therefore inhibition of FLJ13744 (Accession NP_079287.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13744.

[61550] FLJ14001 (Accession NP_078953.2) is another GAM8678 target gene, herein designated TARGET GENE. FLJ14001 BINDING SITE is a target binding site found in the 5` un-translated region of mRNA encoded by FLJ14001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14001 BINDING SITE, designated SEQ ID:5786, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61551] Another function of GAM8678 is therefore inhibition of FLJ14001 (Accession NP_078953.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14001.

[61552] FLJ20618 (Accession NP_060373.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ20618 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ20618, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20618 BINDING SITE, designated SEQ ID:8115, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61553] Another function of GAM8678 is therefore inhibition of FLJ20618 (Accession NP_060373.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20618.

[61554] FLJ20699 (Accession NP_060401.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ20699 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20699, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20699 BINDING SITE, designated SEQ ID:18495, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61555] Another function of GAM8678 is therefore inhibition of

FLJ20699 (Accession NP_060401.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20699.

[61556] FLJ22031 (Accession NP_079350.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ22031 BINDING SITE1 and FLJ22031 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ22031, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22031 BINDING SITE1 and FLJ22031 BINDING SITE2, designated SEQ ID:6101 and SEQ ID:19363 respectively, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61557] Another function of GAM8678 is therefore inhibition of FLJ22031 (Accession NP_079350.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22031.

[61558] FLJ22167 (Accession NP_078809.2) is another GAM8678 target gene, herein designated TARGET GENE. FLJ22167

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22167 BINDING SITE, designated SEQ ID:9412, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61559] Another function of GAM8678 is therefore inhibition of FLJ22167 (Accession NP_078809.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22167.

[61560] FLJ22246 (Accession NP_079508.2) is another GAM8678 target gene, herein designated TARGET GENE. FLJ22246 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22246, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22246 BINDING SITE, designated SEQ ID:11816, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61561] Another function of GAM8678 is therefore inhibition of FLJ22246 (Accession NP_079508.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22246.

[61562] FLJ23342 (Accession NP_078907.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ23342 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23342, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23342 BINDING SITE, designated SEQ ID:18137, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61563] Another function of GAM8678 is therefore inhibition of FLJ23342 (Accession NP_078907.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23342.

[61564] FLJ23614 (Accession NP_689908.2) is another GAM8678 target gene, herein designated TARGET GENE. FLJ23614 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ23614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23614 BINDING SITE, designated SEQ ID:5496, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61565] Another function of GAM8678 is therefore inhibition of FLJ23614 (Accession NP_689908.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23614.

[61566] FLJ25410 (Accession NP_653206.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ25410 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ25410, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25410 BINDING SITE, designated SEQ ID:3189, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61567] Another function of GAM8678 is therefore inhibition of

FLJ25410 (Accession NP_653206.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25410.

[61568] FLJ30313 (Accession NP_689970.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ30313 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ30313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30313 BINDING SITE, designated SEQ ID:12845, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61569] Another function of GAM8678 is therefore inhibition of FLJ30313 (Accession NP_689970.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30313.

[61570] FLJ31364 (Accession NP_689676.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ31364 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31364, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31364 BINDING SITE, designated SEQ ID:14150, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61571] Another function of GAM8678 is therefore inhibition of FLJ31364 (Accession NP_689676.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31364.

[61572] FLJ32063 (Accession NP_694576.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ32063 BINDING SITE1 and FLJ32063 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ32063, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32063 BINDING SITE1 and FLJ32063 BINDING SITE2, designated SEQ ID:7129 and SEQ ID:12524 respectively, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61573] Another function of GAM8678 is therefore inhibition of FLJ32063 (Accession NP_694576.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32063.

[61574] FLJ35487 (Accession NP_776181.1) is another GAM8678 target gene, herein designated TARGET GENE. FLJ35487 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ35487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35487 BINDING SITE, designated SEQ ID:8392, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61575] Another function of GAM8678 is therefore inhibition of FLJ35487 (Accession NP_776181.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35487.

[61576] Ferritin, heavy polypeptide 1 (FTH1, Accession NP_002023.1) is another GAM8678 target gene, herein designated TARGET GENE. FTH1 BINDING SITE is a target

binding site found in the 3' untranslated region of mRNA encoded by FTH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FTH1 BINDING SITE, designated SEQ ID:9044, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61577] Another function of GAM8678 is therefore inhibition of Ferritin, heavy polypeptide 1 (FTH1, Accession NP_002023.1), a gene which stores iron in a soluble, non-toxic, readily available form. and therefore is associated with Iron overload, autosomal dominant . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Iron overload, autosomal dominant ., and of other diseases and clinical conditions associated with FTH1.

[61578] The function of FTH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3177.1.Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1) is another GAM8678 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a

target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:4886, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61579] Another function of GAM8678 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated with GGT1.

[61580] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Guanine nucleotide binding protein (g protein), alpha inhibiting activity polypeptide 2 (GNAI2, Accession NP_002061.1) is another GAM8678 target gene,

herein designated TARGET GENE. GNAI2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GNAI2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNAI2 BINDING SITE, designated SEQ ID:12292, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61581] Another function of GAM8678 is therefore inhibition of Guanine nucleotide binding protein (g protein), alpha inhibiting activity polypeptide 2 (GNAI2, Accession NP_002061.1), a gene which is a human G- alpha inhibitory protein and therefore may be associated with Adrenal cortical tumor. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Adrenal cortical tumor, and of other diseases and clinical conditions associated with GNAI2.

[61582] The function of GNAI2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1. Granulysin (GNLY, Accession NP_036615.1) is another GAM8678 target gene, herein designated TARGET

GENE. GNLY BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GNLY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNLY BINDING SITE, designated SEQ ID:10225, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61583] Another function of GAM8678 is therefore inhibition of Granulysin (GNLY, Accession NP_036615.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNLY.

[61584] Glycoprotein a33 (transmembrane) (GPA33, Accession NP_005805.1) is another GAM8678 target gene, herein designated TARGET GENE. GPA33 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GPA33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPA33 BINDING SITE, designated SEQ ID:8463, to the nucleotide sequence of GAM8678

RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61585] Another function of GAM8678 is therefore inhibition of Glycoprotein a33 (transmembrane) (GPA33, Accession NP_005805.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPA33.

[61586] G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) is another GAM8678 target gene, herein designated TARGET GENE. GPR81 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GPR81, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR81 BINDING SITE, designated SEQ ID:13989, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61587] Another function of GAM8678 is therefore inhibition of G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR81.

[61588] G protein-coupled receptor 86 (GPR86, Accession NP_795713.1) is another GAM8678 target gene, herein designated TARGET GENE. GPR86 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GPR86, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR86 BINDING SITE, designated SEQ ID:9168, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61589] Another function of GAM8678 is therefore inhibition of G protein-coupled receptor 86 (GPR86, Accession NP_795713.1), a gene which plays a role in cell communication. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR86.

[61590] The function of GPR86 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM592.1. G protein-coupled receptor 86 (GPR86, Accession NP_076403.2) is another GAM8678 target gene, herein designated TARGET GENE. GPR86 BINDING SITE is a

target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GPR86, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR86 BINDING SITE, designated SEQ ID:9168, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61591] Another function of GAM8678 is therefore inhibition of G protein-coupled receptor 86 (GPR86, Accession NP_076403.2), a gene which plays a role in cell communication. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR86.

[61592] The function of GPR86 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM592.1. Grip1 associated protein 1 (GRIPAP1, Accession NP_064522.2) is another GAM8678 target gene, herein designated TARGET GENE. GRIPAP1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GRIPAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIPAP1 BINDING SITE, designated SEQ ID:474, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61593] Another function of GAM8678 is therefore inhibition of Grip1 associated protein 1 (GRIPAP1, Accession NP_064522.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIPAP1.

[61594] Histone deacetylase 9 (HDAC9, Accession NP_055522.1) is another GAM8678 target gene, herein designated TARGET GENE. HDAC9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HDAC9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HDAC9 BINDING SITE, designated SEQ ID:747, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61595] Another function of GAM8678 is therefore inhibition of Histone deacetylase 9 (HDAC9, Accession NP_055522.1) .

Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HDAC9.

[61596] Homeo box a1 (HOXA1, Accession NP_705873.1) is another GAM8678 target gene, herein designated TARGET GENE. HOXA1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by HOXA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HOXA1 BINDING SITE, designated SEQ ID:16330, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61597] Another function of GAM8678 is therefore inhibition of Homeo box a1 (HOXA1, Accession NP_705873.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXA1.

[61598] HPS6 (Accession NP_079023.1) is another GAM8678 target gene, herein designated TARGET GENE. HPS6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by HPS6, corresponding to a tar-

get binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPS6 BINDING SITE, designated SEQ ID:16321, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61599] Another function of GAM8678 is therefore inhibition of HPS6 (Accession NP_079023.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HPS6.

[61600] HSPC023 (Accession NP_054766.1) is another GAM8678 target gene, herein designated TARGET GENE. HSPC023 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPC023, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC023 BINDING SITE, designated SEQ ID:3781, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61601] Another function of GAM8678 is therefore inhibition of HSPC023 (Accession NP_054766.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with HSPC023.

[61602] HSPC063 (Accession NP_054874.1) is another GAM8678 target gene, herein designated TARGET GENE. HSPC063 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPC063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC063 BINDING SITE, designated SEQ ID:7756, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61603] Another function of GAM8678 is therefore inhibition of HSPC063 (Accession NP_054874.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC063.

[61604] HUMPPA (Accession XP_290730.2) is another GAM8678 target gene, herein designated TARGET GENE. HUMPPA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HUMPPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of HUMPPA BINDING SITE, designated SEQ ID:3912, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61605] Another function of GAM8678 is therefore inhibition of HUMPPA (Accession XP_290730.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUMPPA.

[61606] IL2-inducible t-cell kinase (ITK, Accession NP_005537.3) is another GAM8678 target gene, herein designated TARGET GENE. ITK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ITK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITK BINDING SITE, designated SEQ ID:14377, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61607] Another function of GAM8678 is therefore inhibition of IL2-inducible t-cell kinase (ITK, Accession NP_005537.3), a gene which plays a role in t cell proliferation and differentiation. and therefore may be associated with Myelodys-

plastic syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Myelodysplastic syndrome, and of other diseases and clinical conditions associated with ITK.

[61608] The function of ITK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.JPHL1 (Accession XP_033366.1) is another GAM8678 target gene, herein designated TARGET GENE. JPHL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by JPHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JPHL1 BINDING SITE, designated SEQ ID:2745, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61609] Another function of GAM8678 is therefore inhibition of JPHL1 (Accession XP_033366.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JPHL1.

[61610] KIAA0258 (Accession NP_055600.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA0258

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0258, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0258 BINDING SITE, designated SEQ ID:824, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61611] Another function of GAM8678 is therefore inhibition of KIAA0258 (Accession NP_055600.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0258.

[61612] KIAA0664 (Accession NP_056044.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA0664 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0664, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0664 BINDING SITE, designated SEQ ID:13478, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61613] Another function of GAM8678 is therefore inhibition of KIAA0664 (Accession NP_056044.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0664.

[61614] KIAA1033 (Accession XP_035313.5) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1033 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1033 BINDING SITE, designated SEQ ID:16075, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61615] Another function of GAM8678 is therefore inhibition of KIAA1033 (Accession XP_035313.5) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1033.

[61616] KIAA1069 (Accession XP_042635.3) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1069 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1069, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1069 BINDING SITE, designated SEQ ID:12231, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61617] Another function of GAM8678 is therefore inhibition of KIAA1069 (Accession XP_042635.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1069.

[61618] KIAA1172 (Accession XP_047889.5) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1172 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1172, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1172 BINDING SITE, designated SEQ ID:19048, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61619] Another function of GAM8678 is therefore inhibition of

KIAA1172 (Accession XP_047889.5) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1172.

[61620] KIAA1404 (Accession NP_066363.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1404 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1404 BINDING SITE, designated SEQ ID:18334, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61621] Another function of GAM8678 is therefore inhibition of KIAA1404 (Accession NP_066363.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1404.

[61622] KIAA1673 (Accession XP_047672.4) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1673 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1673, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1673 BINDING SITE, designated SEQ ID:3546, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61623] Another function of GAM8678 is therefore inhibition of KIAA1673 (Accession XP_047672.4) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1673.

[61624] KIAA1679 (Accession XP_046570.3) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1679 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1679, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1679 BINDING SITE, designated SEQ ID:12115, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61625] Another function of GAM8678 is therefore inhibition of KIAA1679 (Accession XP_046570.3) . Accordingly, utilities

of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1679.

[61626] KIAA1908 (Accession XP_055834.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1908 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1908, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1908 BINDING SITE, designated SEQ ID:13611, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61627] Another function of GAM8678 is therefore inhibition of KIAA1908 (Accession XP_055834.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1908.

[61628] KIAA1920 (Accession XP_085210.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1920 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1920, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1920 BINDING SITE, designated SEQ ID:11223, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61629] Another function of GAM8678 is therefore inhibition of KIAA1920 (Accession XP_085210.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1920.

[61630] KIAA1949 (Accession XP_300202.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:1491, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61631] Another function of GAM8678 is therefore inhibition of KIAA1949 (Accession XP_300202.1) . Accordingly, utilities

of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[61632] KIAA1949 (Accession XP_166376.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:1491, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61633] Another function of GAM8678 is therefore inhibition of KIAA1949 (Accession XP_166376.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[61634] KIAA1949 (Accession XP_300167.1) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded

by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:1491, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61635] Another function of GAM8678 is therefore inhibition of KIAA1949 (Accession XP_300167.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[61636] KIAA1998 (Accession XP_068710.3) is another GAM8678 target gene, herein designated TARGET GENE. KIAA1998 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1998, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1998 BINDING SITE, designated SEQ ID:4429, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61637] Another function of GAM8678 is therefore inhibition of

KIAA1998 (Accession XP_068710.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1998.

[61638] LAPTM4B (Accession NP_060877.3) is another GAM8678 target gene, herein designated TARGET GENE. LAPTM4B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LAPTM4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAPTM4B BINDING SITE, designated SEQ ID:3312, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61639] Another function of GAM8678 is therefore inhibition of LAPTM4B (Accession NP_060877.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAPTM4B.

[61640] Lim domain kinase 1 (LIMK1, Accession NP_058015.1) is another GAM8678 target gene, herein designated TARGET GENE. LIMK1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of

mRNA encoded by LIMK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMK1 BINDING SITE, designated SEQ ID:9080, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

- [61641] Another function of GAM8678 is therefore inhibition of Lim domain kinase 1 (LIMK1, Accession NP_058015.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMK1.
- [61642] Lim and senescent cell antigen-like domains 2 (LIMS2, Accession NP_060450.1) is another GAM8678 target gene, herein designated TARGET GENE. LIMS2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LIMS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMS2 BINDING SITE, designated SEQ ID:4540, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61643] Another function of GAM8678 is therefore inhibition of Lim and senescent cell antigen-like domains 2 (LIMS2, Accession NP_060450.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMS2.

[61644] LOC128387 (Accession XP_059243.2) is another GAM8678 target gene, herein designated TARGET GENE. LOC128387 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC128387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128387 BINDING SITE, designated SEQ ID:6611, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61645] Another function of GAM8678 is therefore inhibition of LOC128387 (Accession XP_059243.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128387.

[61646] LOC142779 (Accession XP_084337.1) is another GAM8678 target gene, herein designated TARGET GENE.

LOC142779 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC142779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142779 BINDING SITE, designated SEQ ID:18014, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61647] Another function of GAM8678 is therefore inhibition of LOC142779 (Accession XP_084337.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142779.

[61648] LOC144248 (Accession XP_084786.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC144248 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC144248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144248 BINDING SITE, designated SEQ ID:5074, to the nucleotide sequence of

GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61649] Another function of GAM8678 is therefore inhibition of LOC144248 (Accession XP_084786.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144248.

[61650] LOC144486 (Accession XP_096608.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC144486 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144486 BINDING SITE, designated SEQ ID:9860, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61651] Another function of GAM8678 is therefore inhibition of LOC144486 (Accession XP_096608.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144486.

[61652] LOC144678 (Accession XP_096656.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC144678 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC144678, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144678 BINDING SITE, designated SEQ ID:17626, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61653] Another function of GAM8678 is therefore inhibition of LOC144678 (Accession XP_096656.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144678.

[61654] LOC145609 (Accession XP_096817.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC145609 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC145609, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC145609 BINDING SITE, designated SEQ ID:16478, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61655] Another function of GAM8678 is therefore inhibition of LOC145609 (Accession XP_096817.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145609.

[61656] LOC150630 (Accession XP_097931.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC150630 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150630 BINDING SITE, designated SEQ ID:3341, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61657] Another function of GAM8678 is therefore inhibition of LOC150630 (Accession XP_097931.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150630.

[61658] LOC152445 (Accession XP_098231.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC152445 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC152445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152445 BINDING SITE, designated SEQ ID:13305, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61659] Another function of GAM8678 is therefore inhibition of LOC152445 (Accession XP_098231.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152445.

[61660] LOC153684 (Accession XP_098412.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC153684 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC153684, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153684 BINDING SITE, designated SEQ ID:2941, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61661] Another function of GAM8678 is therefore inhibition of LOC153684 (Accession XP_098412.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153684.

[61662] LOC154467 (Accession XP_166346.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC154467 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154467 BINDING SITE, designated SEQ ID:17572, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61663] Another function of GAM8678 is therefore inhibition of

LOC154467 (Accession XP_166346.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154467.

[61664] LOC157376 (Accession XP_088301.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC157376 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157376 BINDING SITE, designated SEQ ID:12155, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61665] Another function of GAM8678 is therefore inhibition of LOC157376 (Accession XP_088301.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157376.

[61666] LOC158107 (Accession XP_098873.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC158107 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC158107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158107 BINDING SITE, designated SEQ ID:10149, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61667] Another function of GAM8678 is therefore inhibition of LOC158107 (Accession XP_098873.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158107.

[61668] LOC158527 (Accession XP_088594.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC158527 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC158527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158527 BINDING SITE, designated SEQ ID:17834, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also design-

nated SEQ ID:347.

[61669] Another function of GAM8678 is therefore inhibition of LOC158527 (Accession XP_088594.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158527.

[61670] LOC159121 (Accession XP_099028.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC159121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC159121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159121 BINDING SITE, designated SEQ ID:15930, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61671] Another function of GAM8678 is therefore inhibition of LOC159121 (Accession XP_099028.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159121.

[61672] LOC199777 (Accession NP_660340.1) is another

GAM8678 target gene, herein designated TARGET GENE. LOC199777 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC199777, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199777 BINDING SITE, designated SEQ ID:13813, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61673] Another function of GAM8678 is therefore inhibition of LOC199777 (Accession NP_660340.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199777.

[61674] LOC199796 (Accession XP_058994.3) is another GAM8678 target gene, herein designated TARGET GENE. LOC199796 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC199796, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199796 BINDING SITE, design-

nated SEQ ID:16496, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61675] Another function of GAM8678 is therefore inhibition of LOC199796 (Accession XP_058994.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199796.

[61676] LOC219397 (Accession XP_167889.2) is another GAM8678 target gene, herein designated TARGET GENE. LOC219397 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC219397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219397 BINDING SITE, designated SEQ ID:13531, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61677] Another function of GAM8678 is therefore inhibition of LOC219397 (Accession XP_167889.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC219397.

[61678] LOC220758 (Accession XP_165466.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC220758 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC220758, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220758 BINDING SITE, designated SEQ ID:5833, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61679] Another function of GAM8678 is therefore inhibition of LOC220758 (Accession XP_165466.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220758.

[61680] LOC221122 (Accession XP_167867.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC221122 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221122 BINDING SITE, designated SEQ ID:15261, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61681] Another function of GAM8678 is therefore inhibition of LOC221122 (Accession XP_167867.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221122.

[61682] LOC253609 (Accession XP_172986.2) is another GAM8678 target gene, herein designated TARGET GENE. LOC253609 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253609, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253609 BINDING SITE, designated SEQ ID:9081, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61683] Another function of GAM8678 is therefore inhibition of LOC253609 (Accession XP_172986.2) . Accordingly, utili-

ties of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253609.

[61684] LOC283012 (Accession XP_210847.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283012 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283012 BINDING SITE, designated SEQ ID:11131, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61685] Another function of GAM8678 is therefore inhibition of LOC283012 (Accession XP_210847.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283012.

[61686] LOC283351 (Accession XP_210988.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283351 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283351, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283351 BINDING SITE, designated SEQ ID:9921, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61687] Another function of GAM8678 is therefore inhibition of LOC283351 (Accession XP_210988.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283351.

[61688] LOC283500 (Accession XP_211067.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283500 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283500, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283500 BINDING SITE, designated SEQ ID:11164, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61689] Another function of GAM8678 is therefore inhibition of LOC283500 (Accession XP_211067.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283500.

[61690] LOC283568 (Accession XP_211098.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283568 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283568, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283568 BINDING SITE, designated SEQ ID:5947, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61691] Another function of GAM8678 is therefore inhibition of LOC283568 (Accession XP_211098.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283568.

[61692] LOC283686 (Accession XP_211164.1) is another GAM8678 target gene, herein designated TARGET GENE.

LOC283686 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283686, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283686 BINDING SITE, designated SEQ ID:10535, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61693] Another function of GAM8678 is therefore inhibition of LOC283686 (Accession XP_211164.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283686.

[61694] LOC283801 (Accession XP_208122.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283801 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283801, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283801 BINDING SITE, designated SEQ ID:19380, to the nucleotide sequence of

GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61695] Another function of GAM8678 is therefore inhibition of LOC283801 (Accession XP_208122.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283801.

[61696] LOC283806 (Accession XP_208846.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283806 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283806, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283806 BINDING SITE, designated SEQ ID:15140, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61697] Another function of GAM8678 is therefore inhibition of LOC283806 (Accession XP_208846.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283806.

[61698] LOC283863 (Accession XP_208875.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283863 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283863 BINDING SITE, designated SEQ ID:14458, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61699] Another function of GAM8678 is therefore inhibition of LOC283863 (Accession XP_208875.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283863.

[61700] LOC283875 (Accession XP_211241.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283875 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283875, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283875 BINDING SITE, designated SEQ ID:1114, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61701] Another function of GAM8678 is therefore inhibition of LOC283875 (Accession XP_211241.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283875.

[61702] LOC283927 (Accession XP_208904.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC283927 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283927, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283927 BINDING SITE, designated SEQ ID:3174, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61703] Another function of GAM8678 is therefore inhibition of LOC283927 (Accession XP_208904.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283927.

[61704] LOC284046 (Accession XP_208155.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC284046 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284046 BINDING SITE, designated SEQ ID:16474, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61705] Another function of GAM8678 is therefore inhibition of LOC284046 (Accession XP_208155.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284046.

[61706] LOC284473 (Accession XP_211474.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC284473 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284473, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284473 BINDING SITE, designated SEQ ID:14734, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61707] Another function of GAM8678 is therefore inhibition of LOC284473 (Accession XP_211474.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284473.

[61708] LOC284752 (Accession XP_211628.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC284752 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284752, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284752 BINDING SITE, designated SEQ ID:17078, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61709] Another function of GAM8678 is therefore inhibition of

LOC284752 (Accession XP_211628.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284752.

[61710] LOC285138 (Accession XP_211778.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285138 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285138 BINDING SITE, designated SEQ ID:18958, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61711] Another function of GAM8678 is therefore inhibition of LOC285138 (Accession XP_211778.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285138.

[61712] LOC285205 (Accession XP_211805.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285205 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC285205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285205 BINDING SITE, designated SEQ ID:8095, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61713] Another function of GAM8678 is therefore inhibition of LOC285205 (Accession XP_211805.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285205.

[61714] LOC285717 (Accession XP_211991.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285717 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285717, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285717 BINDING SITE, designated SEQ ID:1765, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also design-

nated SEQ ID:347.

[61715] Another function of GAM8678 is therefore inhibition of LOC285717 (Accession XP_211991.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285717.

[61716] LOC285731 (Accession XP_208347.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285731 BINDING SITE, designated SEQ ID:942, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61717] Another function of GAM8678 is therefore inhibition of LOC285731 (Accession XP_208347.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285731.

[61718] LOC285760 (Accession XP_209750.1) is another

GAM8678 target gene, herein designated TARGET GENE. LOC285760 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285760 BINDING SITE, designated SEQ ID:2013, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61719] Another function of GAM8678 is therefore inhibition of LOC285760 (Accession XP_209750.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285760.

[61720] LOC285786 (Accession XP_208349.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285786 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285786, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285786 BINDING SITE, design-

nated SEQ ID:5902, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61721] Another function of GAM8678 is therefore inhibition of LOC285786 (Accession XP_208349.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285786.

[61722] LOC285915 (Accession XP_209802.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC285915 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285915, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285915 BINDING SITE, designated SEQ ID:5143, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61723] Another function of GAM8678 is therefore inhibition of LOC285915 (Accession XP_209802.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285915.

[61724] LOC286058 (Accession XP_212158.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC286058 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286058 BINDING SITE, designated SEQ ID:14887, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61725] Another function of GAM8678 is therefore inhibition of LOC286058 (Accession XP_212158.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286058.

[61726] LOC286208 (Accession XP_212230.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE, designated SEQ ID:8543, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61727] Another function of GAM8678 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[61728] LOC286370 (Accession XP_212295.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC286370 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286370, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286370 BINDING SITE, designated SEQ ID:12258, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61729] Another function of GAM8678 is therefore inhibition of LOC286370 (Accession XP_212295.1) . Accordingly, utili-

ties of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286370.

[61730] LOC286371 (Accession XP_212291.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC286371 BINDING SITE1 and LOC286371 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286371, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286371 BINDING SITE1 and LOC286371 BINDING SITE2, designated SEQ ID:569 and SEQ ID:8936 respectively, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61731] Another function of GAM8678 is therefore inhibition of LOC286371 (Accession XP_212291.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286371.

[61732] LOC338651 (Accession XP_294672.2) is another GAM8678 target gene, herein designated TARGET GENE. LOC338651 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC338651, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338651 BINDING SITE, designated SEQ ID:5468, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61733] Another function of GAM8678 is therefore inhibition of LOC338651 (Accession XP_294672.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338651.

[61734] LOC338799 (Accession NP_848633.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC338799 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC338799, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338799 BINDING SITE, designated SEQ ID:2042, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA,

also designated SEQ ID:347.

[61735] Another function of GAM8678 is therefore inhibition of LOC338799 (Accession NP_848633.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338799.

[61736] LOC339223 (Accession XP_290774.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC339223 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339223 BINDING SITE, designated SEQ ID:5193, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61737] Another function of GAM8678 is therefore inhibition of LOC339223 (Accession XP_290774.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339223.

[61738] LOC339290 (Accession XP_294901.1) is another

GAM8678 target gene, herein designated TARGET GENE. LOC339290 BINDING SITE1 and LOC339290 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339290, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339290 BINDING SITE1 and LOC339290 BINDING SITE2, designated SEQ ID:8529 and SEQ ID:19490 respectively, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61739] Another function of GAM8678 is therefore inhibition of LOC339290 (Accession XP_294901.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339290.

[61740] LOC339556 (Accession XP_290951.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC339556 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339556 BINDING SITE, designated SEQ ID:19228, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61741] Another function of GAM8678 is therefore inhibition of LOC339556 (Accession XP_290951.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339556.

[61742] LOC340156 (Accession XP_291158.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC340156 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340156, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340156 BINDING SITE, designated SEQ ID:5194, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61743] Another function of GAM8678 is therefore inhibition of LOC340156 (Accession XP_291158.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340156.

[61744] LOC340158 (Accession XP_295175.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC340158 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340158, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340158 BINDING SITE, designated SEQ ID:19672, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61745] Another function of GAM8678 is therefore inhibition of LOC340158 (Accession XP_295175.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340158.

[61746] LOC340276 (Accession XP_295197.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC340276 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340276, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340276 BINDING SITE, designated SEQ ID:8760, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61747] Another function of GAM8678 is therefore inhibition of LOC340276 (Accession XP_295197.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340276.

[61748] LOC343265 (Accession XP_291488.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC343265 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343265 BINDING SITE, designated SEQ ID:14724, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61749] Another function of GAM8678 is therefore inhibition of

LOC343265 (Accession XP_291488.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343265.

[61750] LOC344865 (Accession XP_298324.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC344865 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC344865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC344865 BINDING SITE, designated SEQ ID:727, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61751] Another function of GAM8678 is therefore inhibition of LOC344865 (Accession XP_298324.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC344865.

[61752] LOC348144 (Accession XP_300638.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC348144 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC348144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348144 BINDING SITE, designated SEQ ID:4130, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61753] Another function of GAM8678 is therefore inhibition of LOC348144 (Accession XP_300638.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348144.

[61754] LOC348166 (Accession XP_300293.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC348166 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348166 BINDING SITE, designated SEQ ID:14532, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also design-

nated SEQ ID:347.

[61755] Another function of GAM8678 is therefore inhibition of LOC348166 (Accession XP_300293.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348166.

[61756] LOC349440 (Accession XP_300513.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC349440 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349440 BINDING SITE, designated SEQ ID:14456, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61757] Another function of GAM8678 is therefore inhibition of LOC349440 (Accession XP_300513.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349440.

[61758] LOC351012 (Accession XP_304617.1) is another

GAM8678 target gene, herein designated TARGET GENE. LOC351012 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC351012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC351012 BINDING SITE, designated SEQ ID:8029, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61759] Another function of GAM8678 is therefore inhibition of LOC351012 (Accession XP_304617.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC351012.

[61760] LOC351833 (Accession XP_305187.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC351833 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC351833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC351833 BINDING SITE, design-

nated SEQ ID:18089, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61761] Another function of GAM8678 is therefore inhibition of LOC351833 (Accession XP_305187.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC351833.

[61762] LOC352905 (Accession XP_302020.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC352905 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC352905, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352905 BINDING SITE, designated SEQ ID:18393, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61763] Another function of GAM8678 is therefore inhibition of LOC352905 (Accession XP_302020.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC352905.

[61764] LOC51122 (Accession NP_057178.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC51122 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51122 BINDING SITE, designated SEQ ID:14155, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61765] Another function of GAM8678 is therefore inhibition of LOC51122 (Accession NP_057178.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51122.

[61766] LOC51236 (Accession NP_057542.2) is another GAM8678 target gene, herein designated TARGET GENE. LOC51236 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51236, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC51236 BINDING SITE, designated SEQ ID:17817, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61767] Another function of GAM8678 is therefore inhibition of LOC51236 (Accession NP_057542.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51236.

[61768] LOC90355 (Accession NP_149988.1) is another GAM8678 target gene, herein designated TARGET GENE. LOC90355 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90355, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90355 BINDING SITE, designated SEQ ID:8431, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61769] Another function of GAM8678 is therefore inhibition of LOC90355 (Accession NP_149988.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90355.

[61770] LOC93320 (Accession XP_050534.6) is another GAM8678 target gene, herein designated TARGET GENE. LOC93320 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC93320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93320 BINDING SITE, designated SEQ ID:2120, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61771] Another function of GAM8678 is therefore inhibition of LOC93320 (Accession XP_050534.6) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93320.

[61772] LYG2 (Accession NP_783862.2) is another GAM8678 target gene, herein designated TARGET GENE. LYG2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LYG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYG2 BINDING SITE, designated SEQ ID:1943, to the nucleotide sequence

of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61773] Another function of GAM8678 is therefore inhibition of LYG2 (Accession NP_783862.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYG2.

[61774] Mitogen-activated protein kinase 4 (MAPK4, Accession NP_002738.1) is another GAM8678 target gene, herein designated TARGET GENE. MAPK4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MAPK4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK4 BINDING SITE, designated SEQ ID:18963, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61775] Another function of GAM8678 is therefore inhibition of Mitogen-activated protein kinase 4 (MAPK4, Accession NP_002738.1), a gene which phosphorylates microtubule-associated protein- 2 may promote entry into the cell cycle. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with MAPK4.

[61776] The function of MAPK4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM179.1.MGC14141 (Accession NP_116317.1) is another GAM8678 target gene, herein designated TARGET GENE. MGC14141 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14141, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14141 BINDING SITE, designated SEQ ID:13489, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61777] Another function of GAM8678 is therefore inhibition of MGC14141 (Accession NP_116317.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14141.

[61778] MGC4238 (Accession NP_115708.1) is another GAM8678 target gene, herein designated TARGET GENE. MGC4238 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by MGC4238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4238 BINDING SITE, designated SEQ ID:14031, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61779] Another function of GAM8678 is therefore inhibition of MGC4238 (Accession NP_115708.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4238.

[61780] MGC51025 (Accession NP_848666.1) is another GAM8678 target gene, herein designated TARGET GENE. MGC51025 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC51025, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC51025 BINDING SITE, designated SEQ ID:3328, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61781] Another function of GAM8678 is therefore inhibition of

MGC51025 (Accession NP_848666.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC51025.

[61782] MGC8902 (Accession NP_775909.1) is another GAM8678 target gene, herein designated TARGET GENE. MGC8902 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC8902, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC8902 BINDING SITE, designated SEQ ID:19518, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61783] Another function of GAM8678 is therefore inhibition of MGC8902 (Accession NP_775909.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC8902.

[61784] MSCP (Accession NP_061049.2) is another GAM8678 target gene, herein designated TARGET GENE. MSCP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MSCP,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSCP BINDING SITE, designated SEQ ID:16919, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61785] Another function of GAM8678 is therefore inhibition of MSCP (Accession NP_061049.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSCP.

[61786] Musashi homolog 1 (drosophila) (MSI1, Accession NP_002433.1) is another GAM8678 target gene, herein designated TARGET GENE. MSI1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MSI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSI1 BINDING SITE, designated SEQ ID:6193, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61787] Another function of GAM8678 is therefore inhibition of Musashi homolog 1 (drosophila) (MSI1, Accession

NP_002433.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSI1.

[61788] Mature t-cell proliferation 1 (MTCP1, Accession NP_055036.1) is another GAM8678 target gene, herein designated TARGET GENE. MTCP1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MTCP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTCP1 BINDING SITE, designated SEQ ID:1715, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61789] Another function of GAM8678 is therefore inhibition of Mature t-cell proliferation 1 (MTCP1, Accession NP_055036.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTCP1.

[61790] NaGLT1 (Accession NP_699200.1) is another GAM8678 target gene, herein designated TARGET GENE. NaGLT1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by NaGLT1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NaGLT1 BINDING SITE, designated SEQ ID:2522, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61791] Another function of GAM8678 is therefore inhibition of NaGLT1 (Accession NP_699200.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NaGLT1.

[61792] Neuron navigator 2 (NAV2, Accession NP_660093.1) is another GAM8678 target gene, herein designated TARGET GENE. NAV2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAV2 BINDING SITE, designated SEQ ID:18122, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61793] Another function of GAM8678 is therefore inhibition of

Neuron navigator 2 (NAV2, Accession NP_660093.1), a gene which plays an important role in neuronal development, including neurite outgrowth. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAV2.

[61794] The function of NAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1510.1. Neuron navigator 2 (NAV2, Accession NP_060632.2) is another GAM8678 target gene, herein designated TARGET GENE. NAV2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAV2 BINDING SITE, designated SEQ ID:18122, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61795] Another function of GAM8678 is therefore inhibition of Neuron navigator 2 (NAV2, Accession NP_060632.2), a gene which plays an important role in neuronal development, including neurite outgrowth. Accordingly, utilities

of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAV2.

[61796] The function of NAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1510.1.NECAB2 (Accession NP_061938.1) is another GAM8678 target gene, herein designated TARGET GENE. NECAB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NECAB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NECAB2 BINDING SITE, designated SEQ ID:5863, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61797] Another function of GAM8678 is therefore inhibition of NECAB2 (Accession NP_061938.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NECAB2.

[61798] Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_008912.2) is another GAM8678 target gene,

herein designated TARGET GENE. NR4A3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NR4A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR4A3 BINDING SITE, designated SEQ ID:10007, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61799] Another function of GAM8678 is therefore inhibition of Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_008912.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR4A3.

[61800] Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_775290.1) is another GAM8678 target gene, herein designated TARGET GENE. NR4A3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NR4A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR4A3 BINDING SITE, designated SEQ ID:10007, to the

nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61801] Another function of GAM8678 is therefore inhibition of Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_775290.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR4A3.

[61802] Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_775292.1) is another GAM8678 target gene, herein designated TARGET GENE. NR4A3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NR4A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR4A3 BINDING SITE, designated SEQ ID:10007, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61803] Another function of GAM8678 is therefore inhibition of Nuclear receptor subfamily 4, group a, member 3 (NR4A3, Accession NP_775292.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR4A3.

[61804] Nudix (nucleoside diphosphate linked moiety x)-type motif 9 (NUDT9, Accession NP_076952.1) is another GAM8678 target gene, herein designated TARGET GENE. NUDT9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NUDT9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUDT9 BINDING SITE, designated SEQ ID:4160, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61805] Another function of GAM8678 is therefore inhibition of Nudix (nucleoside diphosphate linked moiety x)-type motif 9 (NUDT9, Accession NP_076952.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUDT9.

[61806] Oculocutaneous albinism ii (pink-eye dilution homolog, mouse) (OCA2, Accession NP_000266.1) is another GAM8678 target gene, herein designated TARGET GENE. OCA2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by OCA2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OCA2 BINDING SITE, designated SEQ ID:19737, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61807] Another function of GAM8678 is therefore inhibition of Oculocutaneous albinism ii (pink-eye dilution homolog, mouse) (OCA2, Accession NP_000266.1), a gene which is believed to be an integral membrane protein involved in small molecule transport, specifically tyrosine – a precursor of melanin. and therefore is associated with Type 2 oculocutaneous albinism. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Type 2 oculocutaneous albinism., and of other diseases and clinical conditions associated with OCA2.

[61808] The function of OCA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) is another GAM8678 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OSBPL2, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:2305, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61809] Another function of GAM8678 is therefore inhibition of Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[61810] Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) is another GAM8678 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OSBPL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:2305, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61811] Another function of GAM8678 is therefore inhibition of

Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[61812] PdZ and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) is another GAM8678 target gene, herein designated TARGET GENE. PDLIM2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PDLIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDLIM2 BINDING SITE, designated SEQ ID:12274, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61813] Another function of GAM8678 is therefore inhibition of PdZ and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDLIM2.

[61814] Pellino homolog 2 (drosophila) (PELI2, Accession NP_067078.1) is another GAM8678 target gene, herein designated TARGET GENE. PELI2 BINDING SITE is a target

binding site found in the 3' untranslated region of mRNA encoded by PELI2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PELI2 BINDING SITE, designated SEQ ID:5142, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61815] Another function of GAM8678 is therefore inhibition of Pellino homolog 2 (drosophila) (PELI2, Accession NP_067078.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PELI2.

[61816] PHGDHL1 (Accession NP_808882.1) is another GAM8678 target gene, herein designated TARGET GENE. PHGDHL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PHGDHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHGDHL1 BINDING SITE, designated SEQ ID:2130, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61817] Another function of GAM8678 is therefore inhibition of PHGDHL1 (Accession NP_808882.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHGDHL1.

[61818] Polycystic kidney and hepatic disease 1 (autosomal recessive) (PKHD1, Accession NP_619639.2) is another GAM8678 target gene, herein designated TARGET GENE. PKHD1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PKHD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKHD1 BINDING SITE, designated SEQ ID:4107, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61819] Another function of GAM8678 is therefore inhibition of Polycystic kidney and hepatic disease 1 (autosomal recessive) (PKHD1, Accession NP_619639.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKHD1.

[61820] Plakophilin 2 (PKP2, Accession NP_004563.1) is another GAM8678 target gene, herein designated TARGET GENE. PKP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PKP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKP2 BINDING SITE, designated SEQ ID:6155, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61821] Another function of GAM8678 is therefore inhibition of Plakophilin 2 (PKP2, Accession NP_004563.1), a gene which may play a role in junctional plaques. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKP2.

[61822] The function of PKP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM93.1. Polymyositis/scleroderma autoantigen 2, 100kda (PMSCL2, Accession NP_002676.1) is another GAM8678 target gene, herein designated TARGET GENE. PMSCL2 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by PMSCL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMSCL2 BINDING SITE, designated SEQ ID:8871, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61823] Another function of GAM8678 is therefore inhibition of Polymyositis/scleroderma autoantigen 2, 100kda (PMSCL2, Accession NP_002676.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PM-SCL2.

[61824] Peanut-like 2 (drosophila) (PNUTL2, Accession NP_536341.1) is another GAM8678 target gene, herein designated TARGET GENE. PNUTL2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PNUTL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNUTL2 BINDING SITE, designated SEQ ID:15639, to the nucleotide sequence of GAM8678 RNA, herein designated

GAM RNA, also designated SEQ ID:347.

[61825] Another function of GAM8678 is therefore inhibition of Peanut-like 2 (drosophila) (PNUTL2, Accession NP_536341.1), a gene which is involved in cytokinesis. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNUTL2.

[61826] The function of PNUTL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Peanut-like 2 (drosophila) (PNUTL2, Accession NP_536340.1) is another GAM8678 target gene, herein designated TARGET GENE. PNUTL2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PNUTL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNUTL2 BINDING SITE, designated SEQ ID:15639, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61827] Another function of GAM8678 is therefore inhibition of Peanut-like 2 (drosophila) (PNUTL2, Accession

NP_536340.1), a gene which is involved in cytokinesis. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNUTL2.

[61828] The function of PNUTL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_848701.1) is another GAM8678 target gene, herein designated TARGET GENE. PPP2R5C BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPP2R5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP2R5C BINDING SITE, designated SEQ ID:2895, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61829] Another function of GAM8678 is therefore inhibition of Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_848701.1), a gene which is a regulatory subunit of protein phosphatase 2A. Ac-

cordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5C.

[61830] The function of PPP2R5C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1. Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_002710.2) is another GAM8678 target gene, herein designated TARGET GENE. PPP2R5C BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPP2R5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP2R5C BINDING SITE, designated SEQ ID:2895, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61831] Another function of GAM8678 is therefore inhibition of Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_002710.2), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of GAM8678 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with PPP2R5C.

[61832] The function of PPP2R5C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1.Prp4 pre-mrna processing factor 4 homolog (yeast) (PRPF4, Accession NP_004688.2) is another GAM8678 target gene, herein designated TARGET GENE. PRPF4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRPF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRPF4 BINDING SITE, designated SEQ ID:9758, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61833] Another function of GAM8678 is therefore inhibition of Prp4 pre-mrna processing factor 4 homolog (yeast) (PRPF4, Accession NP_004688.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRPF4.

[61834] Protein tyrosine phosphatase, non-receptor type 1 (PTPN1, Accession NP_002818.1) is another GAM8678

target gene, herein designated TARGET GENE. PTPN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTPN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPN1 BINDING SITE, designated SEQ ID:8916, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61835] Another function of GAM8678 is therefore inhibition of Protein tyrosine phosphatase, non-receptor type 1 (PTPN1, Accession NP_002818.1), a gene which is a non-receptor type 1 protein tyrosine phosphatase and inhibits insulin signaling. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN1.

[61836] The function of PTPN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Peptide yy, 2 (seminalplasmin) (PYY2, Accession NP_066579.1) is another GAM8678 target gene, herein designated TARGET GENE. PYY2 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by PYY2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYY2 BINDING SITE, designated SEQ ID:18282, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61837] Another function of GAM8678 is therefore inhibition of Peptide yy, 2 (seminalplasmin) (PYY2, Accession NP_066579.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYY2.

[61838] Rna binding motif protein 15 (RBM15, Accession NP_073605.3) is another GAM8678 target gene, herein designated TARGET GENE. RBM15 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RBM15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBM15 BINDING SITE, designated SEQ ID:16706, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61839] Another function of GAM8678 is therefore inhibition of Rna binding motif protein 15 (RBM15, Accession NP_073605.3), a gene which is a candidate oncoprotein and therefore may be associated with Acute megakaryoblastic leukemia (amkl). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Acute megakaryoblastic leukemia (amkl), and of other diseases and clinical conditions associated with RBM15.

[61840] The function of RBM15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM5039.2.RDH11 (Accession NP_057110.2) is another GAM8678 target gene, herein designated TARGET GENE. RDH11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RDH11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDH11 BINDING SITE, designated SEQ ID:12781, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61841] Another function of GAM8678 is therefore inhibition of

RDH11 (Accession NP_057110.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDH11.

[61842] RNF144 (Accession NP_055561.1) is another GAM8678 target gene, herein designated TARGET GENE. RNF144 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNF144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF144 BINDING SITE, designated SEQ ID:9320, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61843] Another function of GAM8678 is therefore inhibition of RNF144 (Accession NP_055561.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF144.

[61844] Retinoid x receptor, alpha (RXRA, Accession NP_002948.1) is another GAM8678 target gene, herein designated TARGET GENE. RXRA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RXRA, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RXRA BINDING SITE, designated SEQ ID:19924, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61845] Another function of GAM8678 is therefore inhibition of Retinoid x receptor, alpha (RXRA, Accession NP_002948.1), a gene which activates genes required for vitamin A metabolism, binds 9- cis retinoic acid. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RXRA.

[61846] The function of RXRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.Splicing factor, arginine/serine-rich 2, interacting protein (SFRS2IP, Accession NP_004710.1) is another GAM8678 target gene, herein designated TARGET GENE. SFRS2IP BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SFRS2IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of SFRS2IP BINDING SITE, designated SEQ ID:4478, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61847] Another function of GAM8678 is therefore inhibition of Splicing factor, arginine/serine-rich 2, interacting protein (SFRS2IP, Accession NP_004710.1), a gene which plays an essential role in pre-mRNA splicing. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFRS2IP.

[61848] The function of SFRS2IP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1. Solute carrier family 4, anion exchanger, member 3 (SLC4A3, Accession NP_005061.1) is another GAM8678 target gene, herein designated TARGET GENE. SLC4A3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC4A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC4A3 BINDING SITE, designated SEQ ID:10313, to the

nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61849] Another function of GAM8678 is therefore inhibition of Solute carrier family 4, anion exchanger, member 3 (SLC4A3, Accession NP_005061.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC4A3.

[61850] SMBP (Accession NP_064508.1) is another GAM8678 target gene, herein designated TARGET GENE. SMBP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SMBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMBP BINDING SITE, designated SEQ ID:2093, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61851] Another function of GAM8678 is therefore inhibition of SMBP (Accession NP_064508.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMBP.

[61852] Small nuclear ribonucleoprotein polypeptide n (SNRPN,

Accession NP_073718.1) is another GAM8678 target gene, herein designated TARGET GENE. SNRPN BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by SNRPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNRPN BINDING SITE, designated SEQ ID:15260, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61853] Another function of GAM8678 is therefore inhibition of Small nuclear ribonucleoprotein polypeptide n (SNRPN, Accession NP_073718.1), a gene which may be involved in tissue-specific alternative RNA processing events and therefore may be associated with Prader-willi syndrome, angelman syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Prader-willi syndrome, angelman syndrome, and of other diseases and clinical conditions associated with SNRPN.

[61854] The function of SNRPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM507.1. Small nuclear ribonucleoprotein polypeptide

n (SNRPN, Accession NP_073719.1) is another GAM8678 target gene, herein designated TARGET GENE. SNRPN BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by SNRPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNRPN BINDING SITE, designated SEQ ID:15260, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61855] Another function of GAM8678 is therefore inhibition of Small nuclear ribonucleoprotein polypeptide n (SNRPN, Accession NP_073719.1), a gene which may be involved in tissue- specific alternative RNA processing events and therefore may be associated with Prader- willi syndrome, angelman syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Prader- willi syndrome, angelman syndrome, and of other diseases and clinical conditions associated with SNRPN.

[61856] The function of SNRPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM507.1.Serine/arginine repetitive matrix 1 (SRRM1, Accession NP_005830.1) is another GAM8678 target gene, herein designated TARGET GENE. SRRM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SRRM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRRM1 BINDING SITE, designated SEQ ID:9316, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61857] Another function of GAM8678 is therefore inhibition of Serine/arginine repetitive matrix 1 (SRRM1, Accession NP_005830.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRRM1.

[61858] ST18 (Accession NP_055497.1) is another GAM8678 target gene, herein designated TARGET GENE. ST18 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ST18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ST18 BINDING

SITE, designated SEQ ID:7850, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

- [61859] Another function of GAM8678 is therefore inhibition of ST18 (Accession NP_055497.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ST18.
- [61860] Staufen, rna binding protein (drosophila) (STAU, Accession NP_059346.1) is another GAM8678 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:13032, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.
- [61861] Another function of GAM8678 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_059346.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of

GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[61862] The function of STAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM37.1.Staufen, rna binding protein (drosophila) (STAU, Accession NP_059347.1) is another GAM8678 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:13032, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61863] Another function of GAM8678 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_059347.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[61864] The function of STAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM37.1. Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1) is another GAM8678 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:13032, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61865] Another function of GAM8678 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[61866] The function of STAU and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM37.1.STN2 (Accession NP_149095.2) is another GAM8678 target gene, herein designated TARGET GENE. STN2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by STN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STN2 BINDING SITE, designated SEQ ID:7040, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61867] Another function of GAM8678 is therefore inhibition of STN2 (Accession NP_149095.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STN2.

[61868] T1A-2 (Accession NP_006465.1) is another GAM8678 target gene, herein designated TARGET GENE. T1A-2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by T1A-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of T1A-2 BINDING SITE, designated SEQ ID:7465, to the nucleotide

sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61869] Another function of GAM8678 is therefore inhibition of T1A-2 (Accession NP_006465.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with T1A-2.

[61870] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) is another GAM8678 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:19762, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61871] Another function of GAM8678 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[61872] T-cell leukemia/lymphoma 6 (TCL6, Accession

NP_065579.2) is another GAM8678 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:19762, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61873] Another function of GAM8678 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065579.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[61874] TEM6 (Accession NP_073585.6) is another GAM8678 target gene, herein designated TARGET GENE. TEM6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TEM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TEM6 BINDING SITE, designated SEQ ID:3134, to the nucleotide se-

quence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61875] Another function of GAM8678 is therefore inhibition of TEM6 (Accession NP_073585.6), a gene which displays elevated expression during tumor angiogenesis. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TEM6.

[61876] The function of TEM6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.Transmembrane protein 2 (TMEM2, Accession NP_037522.1) is another GAM8678 target gene, herein designated TARGET GENE. TMEM2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TMEM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM2 BINDING SITE, designated SEQ ID:15174, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61877] Another function of GAM8678 is therefore inhibition of

Transmembrane protein 2 (TMEM2, Accession NP_037522.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM2.

[61878] Thymopoietin (TMPO, Accession NP_003267.1) is another GAM8678 target gene, herein designated TARGET GENE. TMPO BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TMPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPO BINDING SITE, designated SEQ ID:17228, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61879] Another function of GAM8678 is therefore inhibition of Thymopoietin (TMPO, Accession NP_003267.1), a gene which plays important roles in T- cell development and function. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPO.

[61880] The function of TMPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM884.1.TMPRSS6 (Accession NP_705837.1) is another GAM8678 target gene, herein designated TARGET GENE. TMPRSS6 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TMPRSS6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS6 BINDING SITE, designated SEQ ID:7953, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61881] Another function of GAM8678 is therefore inhibition of TMPRSS6 (Accession NP_705837.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS6.

[61882] Tumor necrosis factor receptor superfamily, member 21 (TNFRSF21, Accession NP_055267.1) is another GAM8678 target gene, herein designated TARGET GENE. TNFRSF21 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNFRSF21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of TNFRSF21 BINDING SITE, designated SEQ ID:13399, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61883] Another function of GAM8678 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 21 (TNFRSF21, Accession NP_055267.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF21.

[61884] TP53I5 (Accession XP_290532.2) is another GAM8678 target gene, herein designated TARGET GENE. TP53I5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TP53I5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53I5 BINDING SITE, designated SEQ ID:13005, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61885] Another function of GAM8678 is therefore inhibition of TP53I5 (Accession XP_290532.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TP5315.

[61886] TREM5 (Accession NP_777552.1) is another GAM8678 target gene, herein designated TARGET GENE. TREM5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TREM5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TREM5 BINDING SITE, designated SEQ ID:16803, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61887] Another function of GAM8678 is therefore inhibition of TREM5 (Accession NP_777552.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TREM5.

[61888] TRIM (Accession NP_057472.1) is another GAM8678 target gene, herein designated TARGET GENE. TRIM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM BINDING SITE, designated SEQ ID:12763, to the nucleotide se-

quence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

- [61889] Another function of GAM8678 is therefore inhibition of TRIM (Accession NP_057472.1), a gene which plays a role in recruiting signaling proteins to the plasma membrane upon T- cell receptor (TCR) complex activation in T cells. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM.
- [61890] The function of TRIM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.1. Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1) is another GAM8678 target gene, herein designated TARGET GENE. TRIM9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRIM9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM9 BINDING SITE, designated SEQ ID:5946, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61891] Another function of GAM8678 is therefore inhibition of Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1), a gene which may function as a positive regulator for mannosylphosphate transferase and is required to mediate mannosylphosphate transfer in both the core and outer chain portions of n-linked oligosaccharides. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM9.

[61892] The function of TRIM9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.TU12B1-TY (Accession NP_057659.1) is another GAM8678 target gene, herein designated TARGET GENE. TU12B1-TY BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TU12B1-TY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU12B1-TY BINDING SITE, designated SEQ ID:16134, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61893] Another function of GAM8678 is therefore inhibition of TU12B1-TY (Accession NP_057659.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU12B1-TY.

[61894] Uridine phosphorylase (UP, Accession NP_853628.1) is another GAM8678 target gene, herein designated TARGET GENE. UP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by UP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UP BINDING SITE, designated SEQ ID:18427, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61895] Another function of GAM8678 is therefore inhibition of Uridine phosphorylase (UP, Accession NP_853628.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UP.

[61896] Uridine phosphorylase (UP, Accession NP_003355.1) is another GAM8678 target gene, herein designated TARGET

GENE. UP BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by UP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UP BINDING SITE, designated SEQ ID:18427, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61897] Another function of GAM8678 is therefore inhibition of Uridine phosphorylase (UP, Accession NP_003355.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UP.

[61898] Ubiquitin specific protease 24 (USP24, Accession XP_165973.3) is another GAM8678 target gene, herein designated TARGET GENE. USP24 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by USP24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP24 BINDING SITE, designated SEQ ID:4851, to the nucleotide sequence of GAM8678

RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61899] Another function of GAM8678 is therefore inhibition of Ubiquitin specific protease 24 (USP24, Accession XP_165973.3) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP24.

[61900] Williams beuren syndrome chromosome region 18 (WBSCR18, Accession NP_115693.2) is another GAM8678 target gene, herein designated TARGET GENE. WBSCR18 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WBSCR18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR18 BINDING SITE, designated SEQ ID:18022, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61901] Another function of GAM8678 is therefore inhibition of Williams beuren syndrome chromosome region 18 (WBSCR18, Accession NP_115693.2) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-

SCR18.

[61902] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579877.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61903] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579877.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf-hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf-hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61904] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579888.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61905] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579888.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf-hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf-hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61906] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61907] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61908] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579890.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61909] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579890.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf-hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf-hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61910] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579878.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61911] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579878.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf-hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf-hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61912] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579879.1) is another GAM8678 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:2577, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61913] Another function of GAM8678 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579879.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf-hirschhorn syndrome. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Wolf-hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[61914] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.WSB2 (Accession NP_061109.1) is another GAM8678 target gene, herein designated TARGET GENE. WSB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WSB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WSB2 BINDING SITE, designated SEQ ID:7154, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61915] Another function of GAM8678 is therefore inhibition of WSB2 (Accession NP_061109.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WSB2.

[61916] ZFP106 (Accession NP_071918.1) is another GAM8678 target gene, herein designated TARGET GENE. ZFP106 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZFP106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP106 BINDING SITE, designated SEQ ID:19973, to the nucleotide sequence of GAM8678 RNA, herein designated

GAM RNA, also designated SEQ ID:347.

[61917] Another function of GAM8678 is therefore inhibition of ZFP106 (Accession NP_071918.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP106.

[61918] Zinc finger protein 211 (ZNF211, Accession NP_006376.1) is another GAM8678 target gene, herein designated TARGET GENE. ZNF211 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ZNF211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF211 BINDING SITE, designated SEQ ID:19228, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61919] Another function of GAM8678 is therefore inhibition of Zinc finger protein 211 (ZNF211, Accession NP_006376.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF211.

[61920] Zinc finger protein 211 (ZNF211, Accession XP_290823.1) is another GAM8678 target gene, herein designated TAR-

GET GENE. ZNF211 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ZNF211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF211 BINDING SITE, designated SEQ ID:19228, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61921] Another function of GAM8678 is therefore inhibition of Zinc finger protein 211 (ZNF211, Accession XP_290823.1). Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF211.

[61922] Zinc finger protein 79 (pt7) (ZNF79, Accession NP_009066.1) is another GAM8678 target gene, herein designated TARGET GENE. ZNF79 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ZNF79, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF79 BINDING SITE, designated SEQ ID:9053, to the nucleotide sequence of GAM8678

RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61923] Another function of GAM8678 is therefore inhibition of Zinc finger protein 79 (pt7) (ZNF79, Accession NP_009066.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF79.

[61924] Zinc finger protein 84 (hpf2) (ZNF84, Accession NP_003419.1) is another GAM8678 target gene, herein designated TARGET GENE. ZNF84 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ZNF84, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF84 BINDING SITE, designated SEQ ID:852, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61925] Another function of GAM8678 is therefore inhibition of Zinc finger protein 84 (hpf2) (ZNF84, Accession NP_003419.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF84.

[61926] Zw10 homolog, centromere/kinetochore protein

(drosophila) (ZW10, Accession NP_004715.1) is another GAM8678 target gene, herein designated TARGET GENE. ZW10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZW10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZW10 BINDING SITE, designated SEQ ID:10937, to the nucleotide sequence of GAM8678 RNA, herein designated GAM RNA, also designated SEQ ID:347.

[61927] Another function of GAM8678 is therefore inhibition of Zw10 homolog, centromere/kinetochore protein (drosophila) (ZW10, Accession NP_004715.1) . Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZW10.

[61928] It is appreciated by persons skilled in the art that the present invention is not limited by what has been particularly shown and described hereinabove. Rather the scope of the present invention includes both combinations and subcombinations of the various features described hereinabove as well as variations and modifications which would occur to persons skilled in the art upon reading the

specifications and which are not in the prior art.

[61929] DETAILED DESCRIPTION OF LARGE TABLES

[61930] Table 1 comprises data relating to the source and location of novel GAM genes of the present invention, and contains the following fields: GENE NAME: Rosetta Genomics Ltd. gene nomenclature (see below); GAM SEQ-ID: GAM Seq-ID, as in the Sequence Listing; PRECUR SEQ-ID: GAM precursor Seq-ID, as in the Sequence Listing; ORGANISM: Abbreviated (hsa = Homo sapiens); CHR: Chromosome encoding the GAM gene; CHROMOSOME OFFSET: Offset of GAM precursor sequence on chromosome; SOURCE_REF-ID: Accession number of source sequence; SOURCE_OFFSET: Offset of GAM precursor sequence on source sequence; SRC: Source-type of GAM precursor sequence (see below); GAM ACC: GAM Prediction Accuracy Group (see below);

[61931] Table 2 comprises data relating to GAM precursors of novel GAM genes of the present invention, and contains the following fields: GENE NAME: Rosetta Genomics Ltd. gene nomenclature (see below); PRECUR SEQ-ID: GAM precursor Seq-ID, as in the Sequence Listing; PRECURSOR SEQUENCE: GAM precursor nucleotide sequence (5' to 3'); FOLDED-PRECURSOR: Schematic representation of the GAM folded precursor, beginning 5' end (beginning of

upper row) to 3' end (beginning of lower row), where the hairpin loop is positioned at the right part of the draw;
SRC: Source-type of GAM precursor sequence (see below);
GAM ACC: GAM Prediction Accuracy Group (see below);

[61932] Table 3 comprises data relating to GAM genes of the present invention, and contains the following fields: GENE NAME: Rosetta Genomics Ltd. gene nomenclature (see below); GAM SEQ-ID: GAM Seq-ID, as in the Sequence Listing; GENE_SEQUENCE: Sequence (5' to 3') of the mature, 'diced' GAM gene; PRECUR SEQ-ID : GAM precursor Seq-ID, as in the Sequence Listing; SOURCE_REF-ID: Accession number of the source sequence; SRC Source-type of GAM precursor sequence (see below); GAM ACC: GAM Prediction Accuracy Group (see below);

[61933] Table 4 comprises data relating to target-genes and binding sites of GAM genes of the present invention, and contains the following fields: GENE NAME: Rosetta Genomics Ltd. gene nomenclature (see below); GAM SEQ-ID: GAM Seq-ID, as in the Sequence Listing; TARGET: GAM target protein name; #BS: Number of unique binding sites of GAM onto Target; TARGET SEQ-ID: Target binding site Seq-ID, as in the Sequence Listing; TARGET REF-ID: Target accession number (GenBank); UTR: Untranslated region of

binding site/s (3' or 5'); UTR OFFSET: Offset of GAM binding site relative to UTR; TAR-BINDING-SITE-SEQ: Nucleotide sequence (5' to 3') of the target binding site; BINDING-SITE-DRAW: Schematic representation of the binding site, upper row present 5' to 3' sequence of the GAM, lower row present 3' to 5' sequence of the target; SRC: Source-type of GAM precursor sequence (see below); GAM ACC: GAM Prediction Accuracy Group (see below); BS ACC: Binding-Site Accuracy Group (see below); TAR ACC: Target Accuracy Group (see below);

[61934] Table5 comprises data of gene function references – Bibliography and contains the following fields: GENE NAME: Rosetta Genomics Ltd. gene nomenclature (see below); TARGET: GAM target protein name; REFERENCES: list of references relating to the target gene; SRC: Source-type of GAM precursor sequence (see below); GAM ACC: GAM Prediction Accuracy Group (see below); TAR ACC: Target Accuracy Group (see below); and

[61935] The following conventions and abbreviations are used in the tables:

[61936] GENE NAME is a RosettaGenomics Ltd. gene nomenclature. All GAMs are designated by GAMx where x is the unique SEQ-ID.

- [61937] SRC is a field indicating the type of source in which novel genes were detected, as one of the following options: (1) TIGR Intergenic, (3) EST or Unigene Intron Intergenic, (4) TIGR Intron, (6) DNA Intergenic, (7) DNA Intron, (8) DNA Exon. Sequences are based on NCBI Build33 of the human genome. TIGR source is based on "Tentative Human Consensus" (THC) The Institute for Genomic Research which are not found in mRNA Intron/Exon according to NCBI GenBank genome annotation.
- [61938] GAM ACC (GAM Prediction Accuracy Group) of gene prediction system: A- very high accuracy, B- high accuracy, C- moderate accuracy, D-low accuracy, as described hereinbelow with reference to Fig.21.
- [61939] BS ACC (Binding-Site Accuracy Group) indicates accuracy of target binding site prediction, a- very high accuracy, b- high accuracy, c- moderate accuracy, as described hereinabove with reference to Fig.14B.
- [61940] TAR ACC (Target Accuracy Group) indicates accuracy of total GAM-target binding prediction, considering the number of binding sites a GAM has on the target's UTR; a- very high accuracy, b- high accuracy, c- moderate accuracy, as described hereinabove with reference to Fig.14B.
